ACADEMIC PRESS

Journal of Molecular Biology

Editor-in-Chief
Peter Wright
Department of Molecular Biology, The Scripps Research Institute
10666 N. Torrey Pines Road, La Jolla, CA 92037, U.S.A.

Executive Editor
Jon Karn
MRC Laboratory of Molecular Biology
Hills Road, Cambridge CB2 2QH, U.K.

Founding Editor
Sir John Kendrew

Consulting Editor
Sydney Brenner

Editors

red E. Cohen, Department of Pharmaceutical Chemistry, School of Pharmacy, University of California, San Francisco, CA 94143–0446, U.S.A.
lan R. Fersht, University Chemical Laboratory, Cambridge University, Lensfield Road, Cambridge CB2 1EW, U.K.
Max Gottesman, Institute of Cancer Research, College of Physicians & Surgeons of Columbia University, 701 W. 168th Street, New York, NY 10032, U.S.A.
Robert Huber, Max-Planck-Institut für Biochemie, 82152 Martinsried bei München, Germany.
Aaron Klug, MRC Laboratory of Molecular Biology, Hills Road, Cambridge CB2 2QH, U.K.
Moshe Yaniv, Department of Biotechnology, Pasteur Institute, 25 rue de Dr Roux, 75724 Paris Cedex 15, France.

Associate Editors

Nam-Hai Chua, The Rockefeller University, 1230 York Avenue, New York, NY 10021, U.S.A.
David E. Draper, Department of Chemistry, Johns Hopkins University, 3400 North Charles Street, Baltimore, MD 21218, U.S.A.
Barry Holland, Institut de Génétique et Microbiologie, Bâtiment 409, Université de Paris XI, 91405 Orsay Cedex 05, France.
Barry Honig, Department of Biochemistry & Molecular Biophysics, College of Physicians & Surgeons of Columbia University, 630 West 168th Street, New York, NY 10032, U.S.A.
Vittorio Luzzati, Centre de Génétique Moléculaire, Centre National de la Recherche Scientifique, 91 Gif-sur-Yvette, France.
Jeffrey H. Miller, Department of Microbiology, University of California, 405 Hilgard Avenue, Los Angeles, CA 90024, U.S.A.
Michael F. Moody, School of Pharmacy, University of London, 29/39 Brunswick Square, London WC1N 1AX, U.K.
Steven Reed, Department of Molecular Biology, The Scripps Research Institute, 10666 North Torrey Pines Road, La Jolla, CA 92037, U.S.A.
Timothy Richmond, Institut für Molekularbiologie und Biophysik, Eidgenössische Technische Hochschule, Hönggerberg, CH 8093 Zurich, Switzerland.
Robert Schleif, Biology Department, Johns Hopkins University, Charles & 34th Streets, Baltimore, MD 21218, U.S.A.
Nat L. Sternberg, Du Pont Merck Pharmaceutical Company, 500 South Ridgeway Avenue, Glenholden, PA 19036, U.S.A.
Ian Wilson, The Scripps Research Institute, 10666 North Torrey Pines Road, La Jolla, CA 92037, U.S.A.
Keith R. Yamamoto, Department of Biochemistry and Biophysics, School of Medicine, University of California, San Francisco, CA 94143–0448, U.S.A.
Mitsuhiro Yanagida, Department of Biophysics, Faculty of Science, Kyoto University, Sakyo-Ku, Kyoto 606, Japan.

Editorial Office
Sara Hackwood, Academic Press, 10d St Edward's Passage, Cambridge CB2 3PJ, U.K.

JOURNAL OF MOLECULAR BIOLOGY: ISSN 0022–2836. Volumes 235–244, 1994, is published weekly (except the last weeks in December; 50 issues in total) by Academic Press at 24–28 Oval Road, London NW1 7DX, England. Annual subscription price including postage: £1310 U.K. and Europe and U.S.$2430 elsewhere. Personal subscription rates are available from the publisher. Subscription orders should be sent to Academic Press, Foots Cray High Street, Sidcup, Kent DA14 5HP, U.K. (Tel: 081–300 3322). Send notices of changes of address to the publisher at least 6–8 weeks in advance, including both old and new addresses.

Buyers in Canada should add GST at the current rate of 7%.

Second class postage rate paid at Jamaica, NY 11431, U.S.A.

Air freight and mailing in the U.S.A. by Publications Expediting Inc., 200 Meacham Avenue, Elmont, NY 11003, U.S.A.

U.S.A. POSTMASTERS: send change of addresses to JOURNAL OF MOLECULAR BIOLOGY, c/o Publications Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003, U.S.A.
Printed in U.K., on acid free paper.

Listed in Biological Abstracts, Science Citation Index, Chemical Abstracts, Reference Update, EMBASE, Excerpta Medica, Current Contents, SCISEARCH, Research Alert, Biotechnology Citation Index, Biochemistry and Biophysics Citation Index, Index Medicus, Genetics Abstracts.

List of Contents Volume 235

Number 1, 7 January 1994

equence Alignment and Penalty Choice. Review f Concepts, Case Studies and Implications	M. Vingron and M. S. Waterman	1–12
edefining the Goals of Protein Secondary tructure Prediction	B. Rost, C. Sander and R. Schneider	13–26
ommunications		
vidence for Strained Interactions between ide-chains and the Polypeptide Backbone	W. E. Stites, A. K. Meeker and D. Shortle	27–32
xygen Radical Induced Mutagenesis is DNA olymerase Specific	D. I. Feig and L. A. Loeb	33–41
rystal Structure of Apo-avidin from Hen gg-white	L. Pugliese, M. Malcovati, A. Coda and M. Bolognesi	42–46
he Symmetry of *Escherichia coli* cpn60 (GroEL) etermined by X-ray Crystallography	L. Anders Svensson, B. P. Surin, N. E. Dixon and M. D. Spangfort	47–52
diotope Determining Regions of a Mouse Monoclonal Antibody and Its Humanized ersions. Identification of Framework Residues hat Affect Idiotype Expression	A. Corti, E. Barbanti, P. R. Tempest, F. J. Carr and F. Marcucci	53–60
A Monoclonal Antibody Epitope on Keratin 8 dentified Using a Phage Peptide Library	V. Böttger and E. B. Lane	61–67
The Role of Glu187 in the Regulation of Phosphofructokinase by Phosphoenolpyruvate	I. Auzat, G. Le Bras, P. Branny, F. De La Torre, B. Theunissen and J.-R. Garel	68–72
Native Collagen Fibrils From Echinoderms are Molecularly Bipolar	F. A. Thurmond and J. A. Trotter	73–79
Vertebrate (Chick) Collagen Fibrils Formed *in Vivo* Can Exhibit a Reversal in Molecular Polarity	D. F. Holmes, M. P. Lowe and J. A. Chapman	80–83
Domain Interactions and Connecting Peptides in Lens Crystallins	E.-M. Mayr, R. Jaenicke and R. Glockshuber	84–88
Thermal Stabilization of Thymidylate Synthase by Engineering Two Disulfide Bridges Across the Dimer Interface	R. S. Gokhale, S. Agarwalla, V. S. Francis, D. V. Santi and P. Balaram	89–94
Articles		
Features in the 5′ Non-coding Sequences of Rabbit α and β-Globin mRNAs that Affect Translational Efficiency	M. Kozak	95–110
Post-transcriptional Regulation of the *str* Operon in *Escherichia coli*. Ribosomal Protein S7 Inhibits Coupled Translation of S7 but not its Independent Translation	K. Saito, L. C. Mattheakis and M. Nomura	111–124
Post-transcriptional Regulation of the *str* Operon in *Escherichia coli*. Structural and Mutational Analysis of the Target Site for Translational Repressor S7	K. Saito and M. Nomura	125–139
In Vitro Genetic Analysis of the Hinge Region Between Helical Elements P5-P4-P6 and P7-P3-P8 in the *sunY* Group I Self-splicing Intron	R. Green and J. W. Szostak	140–155
Selective Perturbation of G530 of 16 S rRNA by Translational Miscoding Agents and a Streptomycin-dependence Mutation in Protein S12	T. Powers and H. F. Noller	156–172

Translational Initiation on Structured Messengers. Another Role for the Shine-Dalgarno Interaction	**M. H. de Smit and J. van Duin**	173–184
The Loop Sequence Plays Crucial Roles for Isomerization of Intramolecular DNA Triplexes in Supercoiled Plasmids	**M. Shimizu, K. Kubo, U. Matsumoto and H. Shindo**	185–197
Periodicity of Dinucleotides in Nucleosomes Derived from Simian Virus 40 Chromatin	**M. Bina**	198–208
The *Bacillus subtilis spoVD* Gene Encodes a Mother-cell-specific Penicillin-binding Protein Required for Spore Morphogenesis	**R. A. Daniel, S. Drake, C. E. Buchanan, R. Scholle and J. Errington**	209–220
Explanation for Different Types of Regulation of Arginine Biosynthesis in *Escherichia coli* B and *Escherichia coli* K12 Caused by a Difference Between Their Arginine Repressors	**G. Tian, D. Lim, J. D. Oppenheim and W. K. Maas**	221–230
Increased Longevity of EF-1α High-fidelity Mutants in *Podospora anserina*	**P. Silar and M. Picard**	231–236
Characterization of an *in Vitro*-selected RNA Ligand to the HIV-1 Rev Protein	**K. B. Jensen, L. Green, S. MacDougal-Waugh and C. Tuerk**	237–247
Analysis of Functional Domains of the Packaging Proteins of Bacteriophage T3 by Site-directed Mutagenesis	**M. Morita, M. Tasaka and H. Fujisawa**	248–259
Molecular Models and Structural Comparisons of Native and Mutant Class I Filamentous Bacteriophages Ff (fd, f1, M13), If1 and IKe	**D. A. Marvin, R. D. Hale, C. Nave and M. H. Citterich**	260–286
Conformational Behaviour of the Active and Inactive Forms of the Nucleocapsid NCp7 of HIV-1 Studied by ^{1}H NMR	**N. Morellet, H. de Rocquigny, Y. Mély, N. Jullian, H. Déméné, M. Ottmann, D. Gérard, J. L. Darlix, M. C. Fournie-Zaluski and B. P. Roques**	287–301
Thermal Expansion of Hen Egg-white Lysozyme. Comparison of the 1·9 Å Resolution Structures of the Tetragonal Form of the Enzyme at 100 K and 298 K	**A. C. M. Young, R. F. Tilton and J. C. Dewan**	302–317
MONTY: a Monte Carlo Approach to Protein-DNA Recognition	**R. M. A. Knegtel, J. Antoon, C. Rullmann, R. Boelens and R. Kaptein**	318–324
Sequence Dependence of DNA Structure in Solution	**O. Y. Fedoroff, B. R. Reid and V. P. Chuprina**	325–330
Crystal Structure of the Fungal Peroxidase from *Arthromyces ramosus* at 1·9 Å Resolution. Structural Comparisons with the Lignin and Cytochrome *c* Peroxidases	**N. Kunishima, K. Fukuyama, H. Matsubara, H. Hatanaka, Y. Shibano and T. Amachi**	331–344
Ligand Docking to Proteins with Discrete Side-chain Flexibility	**A. R. Leach**	345–356

Crystallization Notes

Crystallization of Canine Cardiac Calsequestrin	**K. Hayakawa, L. Swenson, S. Baksh, Y. Wei, M. Michalak and Z. S. Derewenda**	357–360
Crystallographic Characterization and Molecular Symmetry of Edestin, a Legumin from Hemp	**S. Patel, R. Cudney and A. McPherson**	361–363
Crystallization and Preliminary X-ray Diffraction Studies on a Trypsin/Chymotrypsin Double-headed Inhibitor from Horse Gram	**B. Prakash, M. R. N. Murthy, Y. N. Sreerama, P. R. Rama Sarma and D. R. Rao**	364–366

Preliminary X-ray Crystallographic Analysis of Biotin Carboxylase Isolated from *Escherichia coli*	**G. Waldrop, H. M. Holden and I. Rayment**	367–369
Crystallization of D-Lactate Dehydrogenase from *Lactobacillus bulgaricus*	**S. Nessler, G. Le Bras, G. Le Bras and J.-R. Garel**	370–371
Crystallization and Preliminary X-ray Analysis of the Monoclonal Anti-tumor Antibody BR96 and its Complex with the Le^y Determinant	**C. Y. Y. Chang, P. D. Jeffrey, J. Bajorath, I. Hellström, K. E. Hellström and S. Sheriff**	372–376
Sequence Notes		
A β-Tubulin Gene of *Naegleria* Encodes a Carboxy-terminal Tyrosine. Aromatic Amino Acids Are Conserved at Carboxy Termini	**E. Y. Lai, S. P. Remillard and C. Fulton**	377–388
Evidence that GHN Phase Bias does not Constitute a Framing Code	**J. F. Curran and B. L. Gross**	389–395
SAV, An Archaebacterial Gene with Extensive Homology to a Family of Highly Conserved Eukaryotic ATPases	**F. Confalonieri, J. Marsault and M. Duguet**	395–401
Author Index		403

Number 2, 14 January 1994

Articles		
Role of the Sigma^{70} Subunit of *Escherichia coli* RNA Polymerase in Transcription Activation	**A. Kumar, B. Grimes, N. Fujita, K. Makino, R. A. Malloch, R. S. Hayward and A. Ishihama**	405–413
*rec*A-independent and *rec*A-dependent Intramolecular Plasmid Recombination. Differential Homology Requirement and Distance Effect	**X. Bi and L. F. Liu**	414–423
A Dominant Negative Allele of the *Escherichia coli uvrD* Gene Encoding DNA Helicase II. A Biochemical and Genetic Characterization	**J. W. George, R. M. Brosh, Jr and S. W. Matson**	424–435
Linker Insertion Mutagenesis Of *Drosophila* Topoisomerase II. Probing The Structure Of Eukaryotic Topoisomerase II	**M. P. Lee and T.-S. Hsieh**	436–447
Genetic Organization of the Conjugal DNA Processing Region of the IncW Plasmid R388	**M. Llosa, S. Bolland and F. de la Cruz**	448–464
Accuracy of Replication Past the T-C (6-4) Adduct	**M. J. Horsfall and C. W. Lawrence**	465–471
A *Caulobacter* DNA Methyltransferase that Functions only in the Predivisional Cell	**G. Zweiger, G. Marczynski and L. Shapiro**	472–485
Interaction of Tn*5* Transposase with the Transposon Termini	**T. W. Wiegand and W. S. Reznikoff**	486–495
DNA Helical Instability Facilitates Initiation at the SV40 Replication Origin	**S. Lin and D. Kowalski**	496–507
Solution Structure of the 3′-End of Brome Mosaic Virus Genomic RNAs. Conformational Mimicry with Canonical tRNAs	**B. Felden, C. Florentz, R. Giegé and E. Westhof**	508–531
Cooperative DNA-Protein Interactions. Effects of Changing the Spacing Between Adjacent Binding Sites	**C. Mao, N. G. Carlson and J. W. Little**	532–544

Ligand-induced Conformational States of the Cytosine-specific DNA Methyltransferase M.*Hga*I-2	**G. S. Baldwin, S. M. Kelly, N. C. Price, G. W. Wilson, B. A. Connolly, P. J. Artymiuk and D. P. Hornby**	545–553
Transmembrane Aromatic Amino Acid Distribution in P-glycoprotein. A Functional Role in Broad Substrate Specificity	**A. B. Pawagi, J. Wang, M. Silverman, R. A. F. Reithmeier and C. M. Deber**	554–564
The Refined Three-Dimensional Structure of an Insect Virus at 2·8 Å Resolution	**J.-P. Wery, V. S. Reddy, M. V. Hosur and J. E. Johnson**	565–586
Characterization of a Trifluoroethanol-induced Partially Folded State of α-Lactalbumin	**A. T. Alexandrescu, Y.-L. Ng and C. M. Dobson**	587–599
Determination of α-Helix Propensity Within the Context of a Folded Protein. Sites 44 and 131 in Bacteriophage T4 Lysozyme	**M. Blaber, X.-J. Zhang, J. D. Lindstrom, S. D. Pepiot, W. A. Baase and B. W. Matthews**	600–624
Significance of Root-Mean-Square Deviation in Comparing Three-dimensional Structures of Globular Proteins	**V. N. Maiorov and G. M. Crippen**	625–634
Cytidine Deaminase. The 2·3 Å Crystal Structure of an Enzyme : Transition-state Analog Complex	**L. Betts, S. Xiang, S. A. Short, R. Wolfenden and C. W. Carter, Jr**	635–656
High Resolution Crystallographic Analysis of a Co-operative Dimeric Hemoglobin	**W. E. Royer, Jr**	657–681
Backbone Flexibility and Stability of Reverse Turn Conformation in a Model System	**J. Scully and J. Hermans**	682–694
Structure of Human Factor D. A Complement System Protein at 2·0 Å Resolution	**S. V. L. Narayana, M. Carson, O. El-Kabbani, J. M. Kilpatrick, D. Moore, X. Chen, C. E. Bugg, J. E. Volanakis and L. J. DeLucas**	695–708
Planar Stacking Interactions of Arginine and Aromatic Side-Chains in Proteins	**M. M. Flocco and S. L. Mowbray**	709–717
Refined Crystal Structure of Rat Parvalbumin, a Mammalian α-lineage Parvalbumin, at 2·0 Å Resolution	**C. A. McPhalen, A. R. Sielecki, B. D. Santarsiero and M. N. G. James**	718–732
Molecular Recognition by Thrombin. Role of the Slow→Fast Transition, Site-specific Ion Binding Energetics and Thermodynamic Mapping of Structural Components	**Y. Ayala and E. Di Cera**	733–746
Defining the Requirements for an Antibody Epitope on Influenza Virus Neuraminidase: How Tolerant are Protein Epitopes?	**J. M. Nuss and G. M. Air**	747–759
Crystallization Notes		
Crystallization and Preliminary Crystallographic Analysis of Sfericase. A *Bacillus sphaericus* Calcium-Dependent Serine Proteinase	**O. Almog, D. Klein, S. Braun and G. Shoham**	760–762
Co-crystallization of the Catalytic Subunit of the Serine/Threonine Specific Protein Phosphatase 1 from Human in Complex with Microcystin LR	**D. Barford and J. C. Keller**	763–766
Crystallization and Preliminary X-ray Analysis of C-reactive Protein from Rat	**M. Hopkins, P. A. Flanagan, S. Bailey, I. D. Glover, D. A. A. Myles and T. J. Greenhough**	767–771
Crystallographic Characterization of Pertactin, a Membrane-associated Protein from *Bordetella pertussis*	**P. Emsley, G. McDermott, I. G. Charles, N. F. Fairweather and N. W. Isaacs**	772–773

Sequence and Crystallization of *Escherichia coli* Dethiobiotin Synthetase, the Penultimate Enzyme of Biotin Biosynthesis	**D. Alexeev, S. M. Bury, C. W. G. Boys, M. A. Turner, L. Sawyer, A. J. Ramsey, H. C. Baxter and R. L. Baxter**	774–776
Crystallization and Preliminary Crystallographic Studies of *Saccharomyces cerevisiae* Alcohol Dehydrogenase I	**S. Ramaswamy, D. A. Kratzer, A. D. Hershey, P. H. Rogers, A. Arnone, H. Eklund and B. V. Plapp**	777–779
Crystallization and X-ray Studies of the DNA-binding Domain of OmpR Protein, a Positive Regulator Involved in Activation of Osmoregulatory Genes in *Escherichia coli*	**H. Kondo, T.-A. Miyaji, M. Suzuki, S.-I. Tate, T. Mizuno, Y. Nishimura and I. Tanaka**	780–782
Crystallization and Preliminary X-ray Investigation of Holotryptophanases from *Escherichia coli* and *Proteus vulgaris*	**I. S. Dementieva, L. N. Zakomirdina, N. I. Sinitzina, A. A. Antson, K. S. Wilson, M. N. Isupov, A. A. Lebedev and E. H. Harutyunyan**	783–786
Crystallization and Preliminary X-ray Diffraction Studies of the Soluble 14 kDa β-Galactoside-binding Lectin from Bovine Heart	**Y. Bourne, B. Bolgiano, M.-P. Nèsa, P. Penfold, D. Johnson, T. Feizi and C. Cambillau**	787–789
Crystallization and Preliminary X-ray Studies of Lipase B from *Candida antarctica*	**J. Uppenberg, S. Patkar, T. Bergfors and T. A. Jones**	790–792
Crystallization and Preliminary Crystallographic Data of Vitelline Membrane Outer Layer Protein 1 VMO1	**T. Shimizu, K. Morikawa, S. Kido and Y. Doi**	793–794
Crystallization and Preliminary X-ray Diffraction Analysis of the β-Chain of a T-cell Antigen Receptor	**G. Boulot, G. A. Bentley, K. Karjalainen and R. A. Mariuzza**	795–797
Sequence Note		
Conservation of a Transcription Antitermination Mechanism in Aminoacyl-tRNA Synthetase and Amino Acid Biosynthesis Genes in Gram-positive Bacteria	**F. J. Grundy and T. M. Henkin**	798–804
Author Index		805–806

Number 3, 21 January 1994

Communication		
Unusual Kinetics of Uracil Formation in Single and Double-stranded DNA by Deamination of Cytosine in Cyclobutane Pyrimidine Dimers	**I. Tessman, M. A. Kennedy and S.-K. Liu**	807–812
Articles		
Mutations in 23 S Ribosomal RNA Perturb Transfer RNA Selection and can Lead to Streptomycin Dependence	**N. Bilgin and M. Ehrenberg**	813–824
The Twist, Writhe and Overall Shape of Supercoiled DNA Change During Counterion-induced Transition from a Loosely to a Tightly Interwound Superhelix. Possible Implications for DNA Structure *in Vivo*	**J. Bednar, P. Furrer, A. Stasiak, J. Dubochet, E. H. Egelman and A. D. Bates**	825–847
Specificity of DnaK–peptide Binding	**A. Gragerov, L. Zeng, X. Zhao, W. Burkholder and M. E. Gottesman**	848–854

DNA Sequence Organization in Chromatosomes	**S. Muyldermans and A. A. Travers**	855–870
On the Location of Linker DNA in the Chromatin Fiber. Studies with Immobilized and Soluble Micrococcal Nuclease	**S. H. Leuba, J. Zlatanova and K. van Holde**	871–880
Expression of Mitochondrial Genes in the Germinating Conidia of *Neurospora crassa*	**P. Bittner-Eddy, A. F. Monroy and R. Brambl**	881–897
Membrane-bound Form of the Pore-forming Domain of Colicin A. A Neutron Scattering Study	**D. Jeanteur, F. Pattus and P. A. Timmins**	898–907
Mapping the Functional Domains of Bacteriophage Lambda Integrase Protein	**Y. W. Han, R. I. Gumport and J. F. Gardner**	908–925
Bona Fide Prediction of Aspects of Protein Conformation. Assigning Interior and Surface Residues from Patterns of Variation and Conservation in Homologous Protein Sequences	**S. A. Benner, I. Badcoe, M. A. Cohen and D. L. Gerloff**	926–958
Comparison of Surface Accessible Residues in Human and Murine Immunoglobulin Fv Domains. Implication for Humanization of Murine Antibodies	**J. T. Pedersen, A. H. Henry, S. J. Searle, B. C. Guild, M. Roguska and A. R. Rees**	959–973
An Epitope Proximal to the Carboxyl Terminus of the α-Subunit is Located near the Lobe Tips of the Phosphorylase Kinase Hexadecamer	**D. A. Wilkinson, T. N. Marion, D. M. Tillman, M. T. Norcum, J. F. Hainfeld, J. M. Seyer and G. M. Carlson**	974–982
Biased Probability Monte Carlo Conformational Searches and Electrostatic Calculations for Peptides and Proteins	**R. Abagyan and M. Totrov**	983–1002
Determination of the Nuclear Magnetic Resonance Structure of the DNA-binding Domain of the *P22 c2* Repressor (1 to 76) in Solution and Comparison with the DNA-binding Domain of the *434* Repressor	**P. Sevilla-Sierra, G. Otting and K. Wüthrich**	1003–1020
PUZZLE: A New Method for Automated Protein Docking Based on Surface Shape Complementarity	**M. Helmer-Citterich and A. Tramontano**	1021–1031
Lattice Model Simulations of Polypeptide Chain Folding	**D. G. Covell**	1032–1043
^{1}H NMR Analysis of the Partly-folded Non-native Two-disulphide Intermediates (30-51,5-14) and (30-51,5-38) in the Folding Pathway of Bovine Pancreatic Trypsin Inhibitor	**C. P. M. van Mierlo, J. Kemmink, D. Neuhaus, N. J. Darby and T. E. Creighton**	1044–1061
Conformational Analysis of a 139 Base-pairs DNA Fragment Containing a Single-stranded Break and Its Interaction with Human Poly(ADP-ribose) Polymerase	**E. Le Cam, F. Fack, J. Ménissier-de Murcia, J. A. H. Cognet, A. Barbin, V. Sarantoglou, B. Révet, E. Delain and G. de Murcia**	1062–1071
^{1}H Nuclear Magnetic Resonance Studies of Hen Lysozyme-*N*-Acetylglucosamine Oligosaccharide Complexes in Solution. Application of Chemical Shifts for the Comparison of Conformational Changes in Solution and in the Crystal	**K. J. Lumb, J. C. Cheetham and C. M. Dobson**	1072–1087
Prediction of Protein Side-chain Conformations from Local Three-dimensional Homology Relationships	**C. A. Laughton**	1088–1097
Catalytic Antibody Model and Mutagenesis Implicate Arginine in Transition-state Stabilization	**V. A. Roberts, J. Stewart, S. J. Benkovic and E. D. Getzoff**	1098–1116

Interactions of Plasminogen with Polymerizing Fibrin and its Derivatives, Monitored with a Photoaffinity Cross-linker and Electron Microscopy	J. W. Weisel, C. Nagaswami, B. Korsholm, L. C. Petersen and E. Suenson	1117–1135

Crystallization Notes

Preliminary Analysis of Multiple Crystal Forms of the Bovine Cyclophilin–Cyclosporin A Complex	S. Itoh, M. J. Fitzgibbon, J. R. Black and M. A. Navia	1136–1140
Crystallization and a Preliminary X-ray Diffraction Study of Macrophage Migration Inhibitory Factor from Human Lymphocytes	M. Suzuki, E. Murata, I. Tanaka, J. Nishihira and M. Sakai	1141–1143
Preliminary Crystallographic Studies on Human Complement Pro-factor D	S. V. L. Narayana, Y. Yamauchi, K. J. Macon, D. Moore, L. J. DeLucas and J. E. Volanakis	1144–1146
Preliminary X-ray Analysis of Truncated Form of Recombinant Fructose-2,6-bisphosphatase	Y.-H. Lee, K. Lin, D. Okar, N. L. Alfano, R. Sarma, J. W. Pflugrath and S. J. Pilkis	1147–1151
A New Crystal Form of Abrin-a from the Seeds of *Abrus precatorius*	T. H. O. Tahirov, T.-H. Lu, Y.-C. Liaw, S.-C. Chu and J.-Y. Lin	1152–1153
Crystallization and Preliminary X-ray Investigation of a Recombinant Outer Membrane Protein from *Neisseria meningitidis*	I. Li de la Sierra, T. Prangé, R. Fourme, G. Padrón, P. Fuentes, A. Musacchio and J. Madrazo	1154–1155
Crystallization and Preliminary X-ray Analysis of the Superoxide Dismutase from *Mycobacterium tuberculosis*	J. B. Cooper, H. P. C. Driessen, S. P. Wood, Y. Zhang and D. Young	1156–1158
Crystallization of a DNA and *N*-acetylserine Binding Fragment (Residues 1 to 233) of *Klebsiella aerogenes* CysB Protein, a Member of the LysR Family	R. Tyrrell, G. J. Davies, K. S. Wilson and A. J. Wilkinson	1159–1161

Sequence Note

Heterocyst-forming Filamentous Cyanobacteria Encode Proteins that Resemble Eukaryotic RNA-binding Proteins of the RNP Family	M. E. Mulligan, D. M. Jackman and S. T. Murphy	1162–1170

Author Index 1171–1172

Number 4, 28 January 1994

Articles

Analysis of RNA Chain Elongation and Termination by *Saccharomyces cerevisiae* RNA Polymerase III	H. Matsuzaki, G. A. Kassavetis and E. P. Geiduschek	1173–1192
Encounters of *Saccharomyces cerevisiae* RNA Polymerase III with its Transcription Factors during RNA Chain Elongation	C. Bardeleben, G. A. Kassavetis and E. P. Geiduschek	1193–1205
Automatic Identification of Group I Intron Cores in Genomic DNA Sequences	F. Lisacek, Y. Diaz and F. Michel	1206–1217
Conformational Drug Determinants of the Sequence Specificity of Drug-stimulated Topoisomerase II DNA Cleavage	G. Capranico, M. Palumbo, S. Tinelli, M. Mabilia, A. Pozzan and F. Zunino	1218–1230
The Human Calbindin-D_{9k} Gene. Complete Structure and Implications on Steroid Hormone Regulation	E.-B. Jeung, P. C. K. Leung and J. Krisinger	1231–1238

Visualization of Protein–Nucleic Acid Interactions Involved in the *in Vitro* Assembly of the *Escherichia coli* 50 S Ribosomal Subunit	**S. J. Tumminia, W. Hellmann, J. S. Wall and M. Boublik**	1239–1250
Location of the Streptomycin Ribosomal Binding Site Explains its Pleiotropic Effects on Protein Biosynthesis	**J. P. Abad and R. Amils**	1251–1260
Isolation, Characterization and Structure of Bacterial Flagellar Motors Containing the Switch Complex	**N. R. Francis, G. E. Sosinsky, D. Thomas and D. J. DeRosier**	1261–1270
Conformation and Phasing of Dystrophin Structural Repeats	**E. Kahana, P. J. Marsh, A. J. Henry, M. Way and W. B. Gratzer**	1271–1277
Analysis of Repeated Motifs in the Talin Rod	**A. D. McLachlan, M. Stewart, R. O. Hynes and D. J. G. Rees**	1278–1290
Cardiotoxin III from the Taiwan Cobra (*Naja naja atra*). Determination of Structure in Solution and Comparison with Short Neurotoxins	**R. Bhaskaran, C. C. Huang, D. K. Chang and C. Yu**	1291–1301
Solution Structure of a Pair of Fibronectin Type I Modules with Fibrin Binding Activity	**M. J. Williams, I. Phan, T. S. Harvey, A. Rostagno, L. I. Gold and I. D. Campbell**	1302–1311
Formation of α-Helix 88–98 Is Essential in the Establishment of Higher-order Structure from Reduced Lysozyme	**T. Ueda, A. Nakashima, Y. Hashimoto, T. Miki, H. Yamada and T. Imoto**	1312–1317
Thermodynamic Puzzle of Apomyoglobin Unfolding	**Y. V. Griko and P. L. Privalov**	1318–1325
Mutation of Tyrosine-67 to Phenylalanine in Cytochrome *c* Significantly Alters the Local Heme Environment	**A. M. Berghuis, J. G. Guillemette, M. Smith and G. D. Brayer**	1326–1341
Crystallization Notes		
Crystallization of 31 kDa C-terminal Fragment of Rat DNA Polymerase β	**Y. Shirakihara, A. Matsukage, Y. Nishimoto and T. Date**	1342–1344
Crystallization, Characterization and Preliminary Crystallographic Studies of Carbamate Kinase of *Streptococcus faecium*	**A. Marina, J. Bravo, I. Fita and V. Rubio**	1345–1347
Crystallization and Preliminary Diffraction Analysis of the Catalytic Domain of Xylanase Z from *Clostridium thermocellum*	**H. Souchon, S. Spinelli, P. Béguin and P. M. Alzari**	1348–1350
Sequence Notes		
Identification of a Divergent Actin-related Protein in *Drosophila*	**S. Frankel, M. B. Heintzelman, S. Artavanis-Tsakonas and M. S. Mooseker**	1351–1356
Arabidopsis thaliana NADPH Thioredoxin Reductase cDNA Characterization and Expression of the Recombinant Protein in *Escherichia coli*	**J.-P. Jacquot, R. Rivera-Madrid, P. Marinho, M. Kollarova, P. Le Maréchal, M. Miginiac-Maslow and Y. Meyer**	1357–1363
Author Index		1365–1367

Number 5, 4 February 1994

Communications		
A Functional Mutant of $tRNA_2^{Arg}$ with Ten Extra Nucleotides in Its TFC Arm	**T. M. F. Tuohy, Z. Li, J. F. Atkins and M. P. Deutscher**	1369–1376

Transfer RNA Mutation and the Malleability of the Genetic Code	**D. W. Schultz and M. Yarus**	1377–1380
Articles		
tRNA Structure and Ribosomal Function. I. tRNA Nucleotide 27-43 Mutations Enhance First Position Wobble	**D. W. Schultz and M. Yarus**	1381–1394
tRNA Structure and Ribosomal Function. II. Interaction Between Anticodon Helix and other tRNA Mutations	**D. W. Schultz and M. Yarus**	1395–1405
Translational Control in Production of Transposase and in Transposition of Insertion Sequence IS*3*	**Y. Sekine, N. Eisaki and E. Ohtsubo**	1406–1420
Factor Independent Activation of *rrnB* P1. An "Extended" Promoter with an Upstream Element that Dramatically Increases Promoter Strength	**L. Rao, W. Ross, J. A. Appleman, T. Gaal, S. Leirmo, P. J. Schlax, M. T. Record, Jr and R. L. Gourse**	1421–1435
Kinetic Theory of ATP-driven Translocases on One-dimensional Polymer Lattices	**M. C. Young, S. B. Kuhl and P. H. von Hippel**	1436–1446
Kinetic Parameters of the Translocation of Bacteriophage T4 Gene 41 Protein Helicase on Single-stranded DNA	**M. C. Young, D. E. Schultz, D. Ring and P. H. von Hippel**	1447–1458
DNA Damage-inducible Replication of the *Escherichia coli* Chromosome is Initiated at Separable Sites within the Minimal *oriC*	**T. Asai, M. Imai and T. Kogoma**	1459–1469
A Promoter Melting Region in the Primary σ Factor of *Bacillus subtilis*. Identification of Functionally Important Aromatic Amino Acids	**Y.-L. Juang and J. D. Helmann**	1470–1488
Probing the Informational Content of *Escherichia coli* σ^{70} Region 2.3 by Combinatorial Cassette Mutagenesis	**C. Waldburger and M. M. Susskind**	1489–1500
Hidden Markov Models in Computational Biology. Applications to Protein Modeling	**A. Krogh, M. Brown, I. S. Mian, K. Sjölander and D. Haussler**	1501–1531
Three-dimensional Solution Structure of the Thrombin-binding DNA Aptamer d(GGTTGGTGTGGTTGG)	**P. Schultze, R. F. Macaya and J. Feigon**	1532–1547
Solution Structure of the Kringle Domain from the Urokinase-type Plasminogen Activator	**X. Li, A. M. Bokman, M. Llinás, R. A. G. Smith and C. M. Dobson**	1548–1559
Refined Molecular Structure of Pig Pancreatic α-Amylase at 2·1 Å Resolution	**S. B. Larson, A. Greenwood, D. Cascio, J. Day and A. McPherson**	1560–1584
The Nuclear Magnetic Resonance Solution Structure of the Mixed Disulfide between *Escherichia coli* Glutaredoxin(C14S) and Glutathione	**J. H. Bushweller, M. Billeter, A. Holmgren and K. Wüthrich**	1585–1597
Factors Influencing the Ability of Knowledge-based Potentials to Identify Native Sequence-Structure Matches	**J.-P. A. Kocher, M. J. Rooman and S. J. Wodak**	1598–1613
Kinetics of Protein Folding. A Lattice Model Study of the Requirements for Folding to the Native State	**A. Šali, E. Shakhnovich and M. Karplus**	1614–1636
Author Index		1637–1639

List of Contents Volume 236

Number 1, 11 February 1994

Communications

The Structure of the RNA Polymerase-Promoter Complex. DNA-bending-angle by Quantitative Electrooptics	**F.-J. Meyer-Almes, H. Heumann and D. Porschke**	1–6
PA28 Activator Protein Forms Regulatory Caps on Proteasome Stacked Rings	**C. W. Gray, C. A. Slaughter and G. N. DeMartino**	7–15
The Human Immunodeficiency Virus Type 1 Encoded Vpu Protein is Phosphorylated by Casein Kinase-2 (CK-2) at Positions Ser52 and Ser56 within a Predicted α-Helix-Turn-α-Helix-Motif	**U. Schubert, P. Henklein, B. Boldyreff, E. Wingender, K. Strebel and T. Porstmann**	16–25
Physiological Concentration of Magnesium Ions Induces a Strong Macroscopic Curvature in GGGCCC-containing DNA	**I. Brukner, S. Susic, M. Dlakic, A. Savic and S. Pongor**	26–32

Articles

Identification, Molecular Cloning, Expression and Chromosome Mapping of a Family of Transformation Upregulated hnRNP-K Proteins Derived by Alternative Splicing	**K. Dejgaard, H. Leffers, H. H. Rasmussen, P. Madsen, T. A. Kruse, B. Gesser, H. Nielsen and J. E. Celis**	33–48
GAAA Tetraloop and Conserved Bulge Stabilize Tertiary Structure of a Group I Intron Domain	**F. L. Murphy and T. R. Cech**	49–63
Visualization of a Tertiary Structural Domain of the *Tetrahymena* Group I Intron by Electron Microscopy	**Y-H. Wang, F. L. Murphy, T. R. Cech and J. D. Griffith**	64–71
An *Escherichia coli* RNA Polymerase Defective in Transcription due to its Overproduction of Abortive Initiation Products	**D. J. Jin and C. L. Turnbough, Jr**	72–80
The Domain Structure of Sigma 54 as Determined by Analysis of a Set of Deletion Mutants	**C. Wong, Y. Tintut and J. D. Gralla**	81–90
Holliday Junction Crossover Topology	**T-J. Fu, Y-C. Tse-Dinh and N. C. Seeman**	91–105
Co-operative Binding of *Escherichia coli* SSB Tetramers to Single-stranded DNA in the $(SSB)_{35}$ Binding Mode	**M. E. Ferrari, W. Bujalowski and T. M. Lohman**	106–123
Purification and Characterization of the *Escherichia coli* RecO Protein. Renaturation of Complementary Single-stranded DNA Molecules Catalyzed by the RecO Protein	**C. Luisi-DeLuca and R. Kolodner**	124–138
Interrelations of Secondary Structure Stability and DNA-binding Affinity in the Bacteriophage SPO1-encoded Type II DNA-binding Protein TF1	**L. Andera, C. J. Spangler, A. Galeone, L. Mayol and E. P. Geiduschek**	139–150
Effect of Single DNA Lesions on *in Vitro* Replication with DNA Polymerase III Holoenzyme. Comparison with other Polymerases	**P. Belguise-Valladier, H. Maki, M. Sekiguchi and R. P. P. Fuchs**	151–164
Linkage of pH, Anion and Cation Effects in Protein-Nucleic Acid Equilibria *Escherichia coli* SSB Protein-Single Stranded Nucleic Acid Interactions	**L. B. Overman and T. M. Lohman**	165–178
The Octameric Histone Core of the Nucleosome. Structural Issues Resolved	**B-C. Wang, J. Rose, G. Arents and E. N. Moudrianakis**	179–188

The Footprint of Chromosomal Proteins HMG-14 and HMG-17 on Chromatin Subunits	**P. J. Alfonso, M. P. Crippa, J. J. Hayes and M. Bustin**	189–198
Formation of Two-dimensional Arrays of Annexin V on Phosphatidylserine-containing Liposomes	**C. Pigault, A. Follenius-Wund, M. Schmutz, J-M. Freyssinet and A. Brisson**	199–208
Structural Dependence of Post-translational Modification and Reductive Acetylation of the Lipoyl Domain of the Pyruvate Dehydrogenase Multienzyme Complex	**N. G. Wallis and R. N. Perham**	209–216
Bacteriophage Lambda N-Dependent Transcription Antitermination. Competition for an RNA Site May Regulate Antitermination	**T. A. Patterson, Z. Zhang, T. Baker, L. L. Johnson, D. I. Friedman and D. L. Court**	217–228
The Solution Structure of the Tyr41→His Mutant of the Single-stranded DNA Binding Protein Encoded by Gene V of the Filamentous Bacteriophage M13	**P. J. M. Folkers, M. Nilges, R. H. A. Folmer, R. N. H. Konings and C. W. Hilbers**	229–246
Local and Transmitted Conformational Changes on Complexation of an Anti-sweetener FAB	**L. W. Guddat, L. Shan, J. M. Anchin D. S. Linthicum and A. B. Edmundson**	247–274
A Single 2′-Hydroxyl Group Converts *B*-DNA to*A*-DNA. Crystal Structure of the DNA-RNA Chimeric Decamer Duplex d(CCGGC)r(G)d(CCGG) with a Novel Intermolecular G·C Base-paired Quadruplet	**C. Ban, B. Ramakrishnan and M. Sundaralingam**	275–285
The Crystal Structure of Affinity-matured Human Growth Hormone at 2 Å Resolution	**M. H. Ultsch, W. Somers, A. A. Kossiakoff and A. M. de Vos**	286–299
Dynamical Structure of the Hinge Region of Immunoglobulin G as Studied by ^{13}C Nuclear Magnetic Resonance Spectroscopy	**H. Kim, C. Matsunaga, A. Yoshino K. Kato and Y. Arata**	300–309
Solution Structure of an Isolated Antibody V_L Domain	**K. L. Constantine, M. S. Friedrichs, W. J. Metzler, M. Wittekind, P. Hensley and L. Mueller**	310–327
Nuclear Magnetic Resonance Solution Structure of the Arc Repressor Using Relaxation Matrix Calculations	**A. M. J. J. Bonvin, H. Vis, J. N. Breg, M. J. M. Burgering, R. Boelens and R. Kaptein**	328–341
X-ray Analysis at 2·0 Å Resolution of Mouse Submaxillary Renin Complexed with a Decapeptide Inhibitor CH-66, Based on the 4–16 Fragment of Rat Angiotensinogen	**C. G. Dealwis, C. Frazao, M. Badasso, J. B. Cooper, I. J. Tickle, H. Driessen, T. L. Blundell, K. Murakami, H. Miyazaki, J. Sueiras-Diaz, D. M. Jones and M. Szelke**	342–360
The Structure of Uridylate Kinase with Its Substrates, Showing the Transition State Geometry	**H-J. Müller-Dieckmann and G. E. Schulz**	361–367
Crystallization Notes		
Characterization, Crystallization and Preliminary X-ray Crystallographic Analysis of the Complex between Barley α-Amylase and the Bifunctional α-Amylase/Subtilisin Inhibitor from Barley Seeds	**F. Vallée, A. Kadziola, Y. Bourne, J-I. Abe and B. Svensson and R. Haser**	368–371
Crystallization and Preliminary X-ray Analysis of Protocatechuate 3,4-Dioxygenase from *Acinetobacter calcoaceticus*	**M. W. Vetting, C. A. Earhart and D. H. Ohlendorf**	372–373
Preliminary Crystallographic Study of Protocatechuate 3,4-Dioxygenase from *Brevibacterium fuscum*	**C. A. Earhart, R. Radhakrishnan, A. M. Orville, J. D. Lipscomb and D. H. Ohlendorf**	374–376

Crystallization of Catechol-1,2 Dioxygenase from *Pseudomonas arvilla C-1*	**C. A. Earhart, M. D. Hall, I. Michaud-Soret, L. Que Jr and D. H. Ohlendorf**	377–378
Preliminary Crystallographic Analysis of Methane Mono-oxygenase Hydroxylase from *Methylosinus trichosporium* OB3b	**W. A. Froland, D. H. Dyer, R. Radhakrishnan, C. A. Earhart, J. D. Lipscomb and D. H. Ohlendorf**	379–381
Crystallization and Preliminary X-ray Analysis of Human Plasma Apolipoprotein C-I	**K. H. Weisgraber, Y. M. Newhouse and A. McPherson**	382–384
The Corn Inhibitor of Blood Coagulation Factor XIIa. Crystallization and Preliminary Crystallographic Analysis	**L. C. Pedersen, V. C. Yee, G. von Dassow, M. Hazeghazam, G. R. Reeck, R. E. Stenkamp and D. C. Teller**	385–387
Crystallization and Preliminary X-ray Diffraction Studies of a Corrinoid Protein from *Sporomusa ovata*	**U. G. Wagner, E. Stupperich, P. Aulkemeyer and C. Kratky**	388–389

Sequence Note

The *hypE* Gene Completes the Gene Cluster for H_2-oxidation in *Azotobacter vinelandii*	**R. P. Garg, A. L. Menon, K. Jacobs, R. M.Robson and R. L. Robson**	390–396

Author Index 397

Number 2, 18 February 1994

Communications

The OZF Gene Encodes a Protein Consisting Essentially of Zinc Finger Motifs	**C. Le Chalony, M.-T. Prospéri, R. Haluza, F. Apiou, B. Dutrillaux and G. Goubin**	399–404
Characterization of Preferred Deoxyribonuclease I Cleavage Sites	**J. E. Herrera and J. B. Chaires**	405–411
Formation of a Hydrophobic Cluster in Denatured Bovine Pancreatic Trypsin Inhibitor	**K. J. Lumb and P. S. Kim**	412–420
Chromosome End Formation and Internal Sequence Elimination as Alternative Genomic Rearrangements in the Ciliate *Paramecium*	**L. Amar**	421–426

Articles

Specific Interactions of *Erwinia chrysanthemi* KdgR Repressor with Different Operators of Genes Involved in Pectinolysis	**W. Nasser, S. Reverchon, G. Condemine and J. Robert-Baudouy**	427–440
High Concentrations of ppGpp Decrease the RNA Chain Growth Rate. Implications for Protein Synthesis and Translational Fidelity During Amino Acid Starvation in *Escherichia coli*	**M. A. Sørensen, K. F. Jensen and S. Pedersen**	441–454
A Chloroplast Group I Intron Undergoes the First Step of Reverse Splicing into Host Cytoplasmic 5·8 S rRNA. Implications for Intron-mediated RNA Recombination, Intron Transposition and 5·8 S rRNA Structure	**A. J. Thompson and D. L. Herrin**	455–468
Studies on Primer Binding of HIV-1 Reverse Transcriptase Using a Fluorescent Probe	**M. D. Delahunty, S. H. Wilson and R. L. Karpel**	469–479
Segregation Properties of Bovine Papillomaviral Plasmid DNA	**A.-C. Stewart, N. Jareborg, M. Simonsson, A. Alderborn and S. Burnett**	480–490

Proximal and Distal Effects of Sequence Context on Ultraviolet Mutational Hotspots in a Shuttle Vector Replicated in Xeroderma Cells	**C. N. Parris, D. D. Levy, J. Jessee and M. M. Seidman**	491–502
Functional Analysis of the 14 kDa Protein of Insertion Sequence *2*	**S.-T. Hu, J.-H. Hwang, L.-C. Lee, C.-H. Lee, P.-L. Li and Y.-C. Hsieh**	503–513
Pyrimidine Ring Fragmentation Products. Effects of Lesion Structure and Sequence Context on Mutagenesis	**M. Maccabee, J. S. Evans, M. P. Glackin, Z. Hatahet and S. S. Wallace**	514–530
Fur Regulon in Gram-negative Bacteria. Identification and Characterization of New Iron-regulated *Escherichia coli* Genes by a Fur Titration Assay	**I. Stojiljkovic, A. J. Bäumler and K. Hantke**	531 545
Domain Structures of the MS Ring Component Protein (FliF) of the Flagellar Basal Body of *Salmonella typhimurium*	**T. Ueno, K. Oosawa and S.-I. Aizawa**	546–555
In Vivo Characterization of Mutants of the Bacteriophage f1 Gene V Protein Isolated by Saturation Mutagenesis	**T. C. Terwilliger, H. B. Zabin, M. P. Horvath, W. S. Sandberg and P. M. Schlunk**	556–571
The Organization of the Spike Complex of Semliki Forest Virus	**C. Vénien-Bryan and S. D. Fuller**	572–583
Crystallization and Initial X-ray Crystallographic Characterization of Recombinant Bovine Inositol Polyphosphate 1-Phosphatase Produced in *Spodoptera frugiperda* Cells	**J. D. York, Z.-W. Chen, J. W. Ponder, A. K. Chauhan, F. S. Mathews and P. W. Majerus**	584–589
Nucleotide Sequence and X-ray Structure of Cyclodextrin Glycosyltransferase from *Bacillus circulans* Strain 251 in a Maltose-dependent Crystal Form	**C. L. Lawson, R. van Montfort, B. Strokopytov, H. J. Rozeboom, K. H. Kalk, G. E. de Vries, D. Penninga, L. Dijkhuizen and B. W. Dijkstra**	590–600
Structure of Tetraubiquitin Shows How Multiubiquitin Chains Can Be Formed	**W. J. Cook, L. C. Jeffrey, E. Kasperek and C. M. Pickart**	601–609
Structural Specificity of Peptides in *Z*-DNA Formation and Energetics of the Peptide-induced *B–Z* Transition of Poly(dG-m^{5}dC)	**H. Takeuchi, N. Hanamura and I. Harada**	610–617
Three-dimensional Model of *Escherichia coli* Gyrase B Subunit Crystallized in Two-dimensions on Novobiocin-Linked Phospholipid Films	**H. Celia, L. Hoermann, P. Schultz, L. Lebeau, V. Mallouh, D. B. Wigley, J. C. Wang, C. Mioskowski and P. Oudet**	618–628
Translational and Rotational Diffusion of Proteins	**P. E. Smith and W. F. van Gunsteren**	629–636
Structural Characterization of the FK506 Binding Protein Unfolded in Urea and Guanidine Hydrochloride	**T. M. Logan, Y. Thériault and S. W. Fesik**	637–648
High Level Expression and Rational Mutagenesis of a Designed Protein, the Minibody. From an Insoluble to a Soluble Molecule	**E. Bianchi, S. Venturini, A. Pessi, A. Tramontano and M. Sollazzo**	649–659
Crystallization Notes		
Crystallization of Thioesterase II from *Escherichia coli*	**L. Swenson, R. Green, S. Smith and Z. S. Derewenda**	660–662
Crystallization and Quaternary Structure Analysis of the NAD$^+$-dependent Leucine Dehydrogenase from *Bacillus sphaericus*	**A. P. Turnbull, S. R. Ashford, P. J. Baker, D. W. Rice, F. H. Rodgers, T. J. Stillman and R. L. Hanson**	663–665
Author Index		667–668

Number 3, 25 February 1994

Communications

ζ-Crystallin: A Lens-specific Promoter and the Gene Recruitment of an Enzyme as a Crystallin	**D. C. Lee, P. Gonzalez and G. Wistow**	669–678
Use of an Inducible Site-specific Recombinase to Probe the Structure of Protein–DNA Complexes Involved in F Plasmid Partition in *Escherichia coli*	**A. S. Lynch and J. C. Wang**	679–684
Nucleosome Structural Changes due to Acetylation	**W. R. Bauer, J. J. Hayes, J. H. White and A. P. Wolffe**	685–690
Folding Intermediate Binds to the Bottom of Bullet-shaped Holo-chaperonin and is Readily Accessible to Antibody	**N. Ishii, H. Taguchi, H. Sasabe and M. Yoshida**	691–696
A Charge Change in an Evolutionarily-conserved Region of the Myosin Globular Head Prevents Myosin and Thick Filament Accumulation in *Drosophila*	**W. A. Kronert, P. T. O'Donnell and S. I. Bernstein**	697–702
The Orientation of Spin-probes Attached to Cys374 on Actin in Oriented Gels	**N. Naber, M. Lorenz and R. Cooke**	703–709

Articles

Molecular Recognition of the Identity-determinant Set of Isoleucine Transfer RNA from *Escherichia coli*	**O. Nureki, T. Niimi, T. Muramatsu, H. Kanno, T. Kohno, C. Florentz, R. Giegé and S. Yokoyama**	710–724
A DNA Minor Groove-binding Ligand Both Potentiates and Arrests Transcription by RNA Polymerase II. Elongation Factor SII Enables Readthrough at Arrest Sites	**J. Mote Jr, P. Ghanouni and D. Reines**	725–737
Escherichia coli Seryl-tRNA Synthetase Recognizes $tRNA^{Ser}$ by Its Characteristic Tertiary Structure	**H. Asahara, H. Himeno, K. Tamura, N. Nameki, T. Hasegawa and M. Shimizu**	738–748
An Ultrastructural, Time-resolved Study of Freezing in the Corneal Stroma	**N. J. Fullwood and K. M. Meek**	749–758
High Resolution Structures of Holo and Apo Formate Dehydrogenase	**V. S. Lamzin, Z. Dauter, V. O. Popov, E. H. Harutyunyan and K. S. Wilson**	759–785
The Role of a Conserved Internal Water Molecule and Its Associated Hydrogen Bond Network in Cytochrome *c*	**A. M. Berghuis, J. G. Guillemette, G. McLendon, F. Sherman, M. Smith and G. D. Brayer**	786–799
Crystal Structure of *Escherichia coli* Thioredoxin Reductase Refined at 2 Å Resolution. Implications for a Large Conformational Change during Catalysis	**G. Waksman, T. S. R. Krishna, C. H. Williams Jr and J. Kuriyan**	800–816
The 1·8 Å Structure of Carbonmonoxy-β_4 Hemoglobin. Analysis of a Homotetramer with the R Quaternary Structure of Liganded $\alpha_2\beta_2$ Hemoglobin	**G. E. O. Borgstahl, P. H. Rogers and A. Arnone**	817–830
The 1·9 Å Structure of Deoxyβ_4 Hemoglobin. Analysis of the Partitioning of Quaternary-associated and Ligand-induced Changes in Tertiary Structure	**G. E. O. Borgstahl, P. H. Rogers and A. Arnone**	831–843
Folding the Main Chain of Small Proteins with the Genetic Algorithm	**T. Dandekar and P. Argos**	844–861

Solution Structure of a *de Novo* Helical Protein by 2D-NMR Spectroscopy	**Y. Kuroda, T. Nakai and T. Ohkubo**	862–868
Accommodation of Amino Acid Insertions in an α-Helix of T4 Lysozyme. Structural and Thermodynamic Analysis	**D. W. Heinz, W. A. Baase, X.-J. Zhang, M. Blaber, F. W. Dahlquist and B. W. Matthews**	869–886
Improved Continuum Electrostatic Modelling in Proteins, with Comparison to Experiment	**J. Warwicker**	887–903
The Activity of Porcine Pancreatic Phospholipase A_2 in 20% Alcohol/Aqueous Solvent, by Experiment and Electrostatics Calculations	**J. Warwicker, I. Mueller-Harvey, I. Sumner and K. M. Bhat**	904–917
Predicting Protein Mutant Energetics by Self-consistent Ensemble Optimization	**C. Lee**	918–939
Delayed Triple Helix Formation of Mutant Collagen from Patients with Osteogenesis Imperfecta	**M. Raghunath, P. Bruckner and B. Steinmann**	940–949

Crystallization Notes

Purification, Characterization and Crystallization of *Acanthamoeba* Profilin Expressed in *Escherichia coli*	**S. C. Almo, T. D. Pollard, M. Way and E. E. Lattman**	950–952
Crystallization and Preliminary X-ray Analysis of apo-S100β and S100β with Ca^{2+}	**R. St Charles and V. D. Kumar**	953–957
A Regular 1 : 1 Complex of Two Allosteric States in the Single Crystal of L-Lactate Dehydrogenase from *Bifidobacterium longum*	**S. Iwata, S. Yoshida and T. Ohta**	958–959
Author Index		961–962

Number 4, 4 March 1994

Communications

Crystalline Mitochondrial Aspartate Aminotransferase Exists in Only Two Conformations	**E. Hohenester and J. N. Jansonius**	963–968
DNase I Footprinting of *cis*- or *trans*-Diamminedichloroplatinum(II)-modified DNA	**A. Schwartz and M. Leng**	969–974
20 S Proteasomes are Assembled *via* Distinct Precursor Complexes. Processing of LMP2 and LMP7 Proproteins Takes Place in 13–16 S Preproteasome Complexes	**S. Frentzel, B. Pesold-Hurt, A. Seelig and P.-M. Kloetzel**	975–981
Fitting the Structurally Diverse Animal Mitochondrial $tRNAs^{Ser}$ to Common Three-dimensional Constraints	**S. Steinberg, D. Gautheret and R. Cedergren**	982–989
Polyhedral Assembly of a Membrane Protein in its Three-dimensional Crystal	**T. Kouyama, M. Yamamoto, N. Kamiya, H. Iwasaki, T. Ueki and I. Sakurai**	990–994
On the Photochemical Release of Phosphate from 3,5-Dinitrophenyl Phosphate in a Protein Crystal	**A. Hadfield and J. Hajdu**	995–1000

Articles

Peptide Antibiotics of the Tuberactinomycin Family as Inhibitors of Group I Intron RNA Splicing	**H. Wank, J. Rogers, J. Davies and R. Schroeder**	1001–1010

The Domains of a Type I DNA Methyltransferase. Interactions and Role in Recognition of DNA Methylation	**L. P. Cooper and D. T. F. Dryden**	1011–1021
Wide Variations in Neighbor-dependent Substitution Rates	**S. T. Hess, J. D. Blake and R. D. Blake**	1022–1033
Effects of DNA Adduct Structure and Distribution on the Mutagenicity and Genotoxicity of Two Platinum Anticancer Drugs	**K. J. Yarema, J. M. Wilson, S. J. Lippard and J. M. Essigmann**	1034–1048
Molecular Recognition in Proteins. Simulation Analysis of Substrate Binding by a Tyrosyl-tRNA Synthetase Mutant	**F. T. K. Lau and M. Karplus**	1049–1066
Volume Changes in Protein Evolution	**M. Gerstein, E. L. L. Sonnhammer and C. Chothia**	1067–1078
Crystal Structure of the Tenth Type III Cell Adhesion Module of Human Fibronectin	**C. D. Dickinson, B. Veerapandian, X.-P. Dai, R. C. Hamlin, N.-H. Xuong, E. Ruoslahti and K R. Ely**	1079–1092
Rotational Orientation of Transmembrane α-helices in Bacteriorhodopsin. A Neutron Diffraction Study	**F. A. Samatey, G. Zaccaï, D. M. Engelman, C. Etchebest and J.-L. Popot**	1093–1104
Prediction of the Positioning of the Seven Transmembrane α-helices of Bacteriorhodopsin. A Molecular Simulation Study	**P. Tuffery, C. Etchebest, J.-L. Popot and R. Lavery**	1105–1122
Crystal Structure of a NAD-dependent D-Glycerate Dehydrogenase at 2·4 Å Resolution	**J. D. Goldberg, T. Yoshida and P. Brick**	1123–1140
Refined 1·7 Å X-ray Crystallographic Structure of P-30 Protein, an Amphibian Ribonuclease with Anti-tumor Activity	**S. C. Mosimann, W. Ardelt and M. N. G. James**	1141–1153
Comparative Studies of High Resolution *Z*-DNA Crystal Structures. Part 1: Common Hydration Patterns of Alternating dC-dG	**R. V. Gessner, G. J. Quigley and M. Egli**	1154–1168
Crystal Structure and Refinement of Cytochrome $P450_{terp}$ at 2·3 Å Resolution	**C. A. Hasemann, K. G. Ravichandran, J. A. Peterson and J. Deisenhofer**	1169–1185
Investigation of Shape Variations in the Antibody Binding Site by Molecular Dynamics Computer Simulation	**X. de la Cruz, A. E. Mark, J. Tormo, I. Fita and W. F. van Gunsteren**	1186–1195
Crystal Structure Analysis and Refinement at 2·15 Å Resolution of Amicyanin, a Type I Blue Copper Protein, from *Thiobacillus versutus*	**A. Romero, H. Nar, R. Huber, A. Messerschmidt, A. P. Kalverda, G. W. Canters, R. Durley and F. S. Mathews**	1196–1211
Coiled-coil Packing in Spermine-induced Tropomyosin Crystals. A Comparative Study of Three Forms	**X. Xie, S. Rao, P. Walian, V. Hatch, G. N. Phillips Jr and C. Cohen**	1212–1226
Unfolding-refolding Kinetics of the Tryptophan Synthase α Subunit by CD and Fluorescence Measurements	**K. Ogasahara and K. Yutani**	1227–1240
Characterization of Multiple Oligomeric Vimentin Intermediate Filament Units by Transient Electric Birefringence Measurements	**M. Kooijman, M. Bloemendal, H. van Amerongen, P. Traub and R. van Grondelle**	1241–1249
Close Packing of an Oligomeric Eye Lens β-Crystallin Induces Loss of Symmetry and Ordering of Sequence Extensions	**V. Nalini, B. Bax, H. Driessen, D. S. Moss, P. F. Lindley and C. Slingsby**	1250–1258

Crystallization Notes

Crystallization and Preliminary X-ray Analysis of the Auto-inhibited Twitchin Kinase — S.-H. Hu, J. Y. Lei, M. C. J. Wilce, M. R. L. Valenzuela, G. M. Benian, M. W. Parker and B. E. Kemp — 1259–1261

Crystals of a Fragment of Influenza Haemagglutinin in the Low pH Induced Conformation — P. A. Bullough, F. M. Hughson, A. C. Treharne, R. W. H. Ruigrok, J. J. Skehel and D. C. Wiley — 1262–1265

Author Index — 1267–1269

Interaction of *EcoP15I* DNA Methyltransferase with Oligonucleotides Containing the Asymmetric Sequence 5'-CAGCAG-3'	**I. Ahmad and D. N. Rao**	378–388
On the Identification of Group II Introns in Nucleotide Sequence Data	**V. Knoop, S. Kloska and A. Brennicke**	389–396
The Molecular Chaperonin TF55 from the Thermophilic Archaeon *Sulfolobus solfataricus*. A Biochemical and Structural Characterization	**S. Knapp, I. Schmidt-Krey, H. Herbert, T. Bergman, H. Jörnvall and R. Ladenstein**	397–407
ATP Synthase from Bovine Heart Mitochondria. *In Vitro* Assembly of a Stalk Complex in the Presence of F_1-ATPase and in its Absence	**I. R. Collinson, M. J. van Raaij, M. J. Runswick, I. M. Fearnley, J. M. Skehel, G. L. Orriss, B. Miroux and J. E. Walker**	408–421
Amino Acid Requirements of the Nucleocapsid Protein of HIV-1 for Increasing Catalytic Activity of a Ki-ras Ribozyme *in Vitro*	**G. Müller, B. Strack, J. Dannull, B. S. Sproat, A. Surovoy, G. Jung and K. Moelling**	422–429
The Refined Crystal Structure of Hexon, the Major Coat Protein of Adenovirus Type 2, at 2·9 Å Resolution	**F. K. Athappilly, R. Murali, J. J. Rux, Z. Cai and R. M. Burnett**	430–455
Protein Subunit Structures in the Herpes Simplex Virus A-capsid Determined from 400 kV Spot-scan Electron Cryomicroscopy	**Z. H. Zhou, B. V. V. Prasad, J. Jakana, F. J. Rixon and W. Chiu**	456–469
Fibritin Encoded by Bacteriophage T4 Gene *wac* has a Parallel Triple-stranded α-Helical Coiled-coil Structure	**V. P. Efimov, I. V. Nepluev, B. N. Sobolev, T. G. Zurabishvili, T. Schulthess, A. Lustig, J. Engel, M. Haener, U. Aebi, S. Yu. Venyaminov, S. A. Potekhin and V. V. Mesyanzhinov**	470–486
Helix Stop and Start Signals in Peptides and Proteins. The Capping Box does not Necessarily Prevent Helix Elongation	**M. A. Jiménez, V. Muñoz, M. Rico and L. Serrano**	487–496
Protein Secondary Structure from Circular Dichroism Spectroscopy. Combining Variable Selection Principle and Cluster Analysis with Neural Network, Ridge Regression and Self-consistent Methods	**N. Sreerama and R. W. Woody**	497–507
Solution Structure of the d(T-C-G-A) Duplex at Acidic pH. A Parallel-stranded Helix Containing $C^+ \cdot C$, $G \cdot G$ and $A \cdot A$ Pairs	**Y. Wang and D. J. Patel**	508–526
Backbone Dynamics of a Highly Disordered 131 Residue Fragment of Staphylococcal Nuclease	**A. T. Alexandrescu and D. Shortle**	527–546
Quantification of the Effect of Excluded Volume on Double-stranded DNA	**D. Louie and P. Serwer**	547–558
Biotin and Biotin Analogues Specifically Modify the Fluorescence Decay of Avidin	**G. Mei, L. Pugliese, N. Rosato, L. Toma, M. Bolognesi and A. Finazzi-Agrò**	559–565
Methionyl-tRNA Synthetase Needs an Intact and Mobile $_{332}$KMSKS$_{336}$ Motif in Catalysis of Methionyl Adenylate Formation	**E. Schmitt, T. Meinnel, S. Blanquet and Y. Mechulam**	566–577

Crystallization Notes

Crystallization and Preliminary Crystallographic Data for Acetohydroxy Acid Isomeroreductase from *Spinacia oleracea* — R. Dumas, D. Job, R. Douce, E. Pebay-Peyroula and C. Cohen-Addad — 578–581

Crystallization of GreA, a Transcript Cleavage Factor from *Escherichia coli* — S. A. Darst, C. E. Stebbins, S. Borukhov, M. Orlova, G. Feng, R. Landick and A. Goldfarb — 582–585

Crystals of HIV-1 Reverse Transcriptase Diffracting to 2·2 Å Resolution — D. K. Stammers, D. O'N. Somers, C. K. Ross, I. Kirby, P. H. Ray, J. E. Wilson, M. Norman, J. S. Ren, R. M. Esnouf, E. F. Garman, E. Y. Jones and D. I. Stuart — 586–588

Crystallization and Preliminary X-ray Diffraction Studies of Human RANTES — J. P. Shaw, G. Kryger, A. Cleasby, A. Wonacott, C. A. Power, A. E. I. Proudfoot and T. N. C. Wells — 589–590

Crystallization and Preliminary X-ray Analysis of Wild-type and K272A Mutant Glutamate 1-Semialdehyde Aminotransferase from *Synechococcus* — M. Hennig, B. Grimm, M. Jenny, R. Müller and J. N. Jansonius — 591–594

Sequence Notes

A Voltage-gated Chloride Channel in the Yeast *Saccharomyces cerevisiae* — M.-E. Huang, J.-C. Chuat and F. Galibert — 595–598

An Alternative Splicing Modifies the C-Terminal End of Tryptophanyl-tRNA Synthetase in Murine Embryonic Stem Cells — B. Pajot, C. Sarger, J. Bonnet and M. Garret — 599–603

Author Index — 605–606

Number 5, 7 October 1994

Communications

Gene Activation by the *Escherichia coli* Positive Regulator, OmpR. Phosphorylation-independent Mechanism of Activation by an OmpR Mutant — M. Tsuzuki, H. Aiba and T. Mizuno — 607–613

Genetic Implication for an Interaction Between Release Factor One and Ribosomal Protein L7/L12 *in vivo* — S. Zhang, M. Rydén-Aulin, L. A. Kirsebom and L. A. Isaksson — 614–618

Articles

Interaction Between Tumour Necrosis Factor α Ribozyme and Cellular Proteins. Involvement in Ribozyme Stability and Activity — M. Sioud — 619–629

DNA Double-strand Break *in vivo* at the 3' Extremity of Exons Located Upstream of Group II Introns Senescence and Circular DNA Introns in *Podospora* Mitochondria — A. Sainsard-Chanet, O. Begel and L. Belcour — 630–643

Synergism between the GTPase Activities of EF-Tu·GTP and EF-G·GTP on Empty Ribosomes. Elongation Factors as Stimulators of the Ribosomal Oscillation between Two Conformations — J. R. Mesters, A. P. Potapov, J. M. de Graaf and B. Kraal — 644–654

Correctly Folded T-cell Receptor Fragments in the Periplasm of *Escherichia coli*. Influence of Folding Catalysts	**C. Wülfing and A. Plückthun**	655–669
Electrophoretic Characterization of the Denatured States of Staphylococcal Nuclease	**T. E. Creighton and D. Shortle**	670–682
Towards Atomic Interpretation of F-Actin Filament Three-dimensional Reconstructions	**A. Bremer, C. Henn, K. N. Goldie, A. Engel, P. R. Smith and U. Aebi**	683–700
Crystallization Notes		
Crystallization and Preliminary X-ray Diffraction Analysis of the ArsC Protein from the *Escherichia coli* Arsenical Resistance Plasmid, R773	**V. S. J. de Mel, M. A. Doyle, T. B. Gladysheva, K. L. Oden, P. D. Martin, B. P. Rosen and B. F. P. Edwards**	701–702
Crystallization and Preliminary X-ray Analysis of the Two Domains of Glucosamine-6-phosphate Synthase from *Escherichia coli*	**G. Obmolova, M.-A. Badet-Denisot, B. Badet and A. Teplyakov**	703–705
Crystallization and Preliminary X-ray Analysis of the Fab Fragment of a Human Monoclonal IgM Rheumatoid Factor (2A2)	**M. K. Sohi, B. J. Sutton, A. L. Corper, T. Wan, R. N. Maini, C. Brown, T. Rijnders, D. Beale, A. Feinstein, A. S. Humphreys and M. J. Taussig**	706–708
Crystallization of Mutant β Subunit of F_1-ATPase from Thermophilic *Bacillus* PS3	**K. Saika, K. Inaka, T. Matsui, M. Yoshida and K. Miki**	709–711
Crystallization and Preliminary X-ray Diffraction Studies on a Recombinant Isopenicillin N Synthase from *Cephalosporium acremonium*	**Y. Fujishima, P. Nordlund, G. Pelosi, C. J. Schofield, S. C. J. Cole, J. E. Baldwin and J. Hajdu**	712–714
Author Index		715–716

List of Contents Volume 243

Number 1, 14 October 1994

Communications		
A Symmetrical Model for the Domain Structure of Type I DNA Methyltransferase	**G. G. Kneale**	1–5
DNA Rearrangement of the Shufflon Determines Recipient Specificity in Liquid Mating of IncI1 Plasmid R64	**T. Komano, S.-R. Kim, T. Yoshida and T. Nisioka**	6–9
Articles		
Phosphorylation of the C-terminal Domain of Yeast Topoisomerase II by Casein Kinase II Affects DNA-Protein Interaction	**Q. Dang, G.-C. Alghisi and S. M. Gasser**	10–24
Generality of the tRNA Origin of Short Interspersed Repetitive Elements (SINEs). Characterization of Three Different tRNA-derived Retroposons in the Octopus	**K. Ohshima and N. Okada**	25–37
Collagen Fibril Structure in Lamprey	**B. Brodsky, K. C. BelBruno, T. A. Hardt and E. F. Eikenberry**	38–47

Evidence Indicating Proximity in the Nucleosome Between the Histone H4 N Termini and the Globular Domain of Histone H1	**J.-L. Banères, L. Essalouh, I. Jariel-Encontre, D. Mesnier, S. Garrod and J. Parello**	48–59
The Motile Major Sperm Protein (MSP) of *Ascaris suum* Forms Filaments Constructed from Two Helical Subfilaments	**M. Stewart, K. L. King and T. M. Roberts**	60–71
Refined Crystal Structure of Porcine Class Pi Glutathione S-Transferase (pGST P1-1) at 2·1 Å Resolution	**H. Dirr, P. Reinemer and R. Huber**	72–92
Residual Structure in a Staphylococcal Nuclease Fragment. Is It Molten Globule and is Its Unfolding a First-order Phase Transition?	**Y. V. Griko, A. Gittis, E. E. Lattman and P. L. Privalov**	93–99
Protein Hydration Observed by X-ray Diffraction. Solvation Properties of Penicillopepsin and Neuraminidase Crystal Structures	**J.-S. Jiang and A. T. Brünger**	100–115
Bacterial Expression of Catalytically Active Fragments of the Multifunctional Enzyme Enniatin Synthetase	**A. Haese, R. Pieper, T. von Ostrowski and R. Zocher**	116–122
Crystallization Notes		
Crystallization and Preliminary Diffraction Studies of *Escherichia coli* Lysyl-tRNA Synthetase (LysU)	**S. Onesti, M.-E. Theoclitou, E. Pernilla, L. Wittung, A. D. Miller, P. Plateau, S. Blanquet and P. Brick**	123–125
Crystallization and Preliminary X-ray Diffraction Studies of the Enoyl-ACP Reductase from *Escherichia coli*	**U. G. Wagner, H. Bergler, S. Fuchsbichler, F. Turnowsky, G. Högenauer and C. Kratky**	126–127
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Human Ornithine Aminotransferase	**B. W. Shen, V. Ramesh, R. Mueller, E. Hohenester, M. Hennig and J. N. Jansonius**	128–130
Sequence Note		
Carbamyl Phosphate Synthetase III, an Evolutionary Intermediate in the Transition Between Glutamine-dependent and Ammonia-dependent Carbamyl Phosphate Synthetases	**J. Hong, W. L. Salo, C. J. Lusty and P. M. Anderson**	131–140
Author Index		141

Number 2, 21 October 1994

Communications		
Hypermethylation of Telomere-like Foldbacks at Codon 12 of the Human c-Ha-*ras* Gene and the Trinucleotide Repeat of the *FMR-1* Gene of Fragile X	**S. S. Smith, A. Laayoun, R. G. Lingeman, D. J. Baker and J. Riley**	143–151
Isolated P2 rRNA Promoters of *Escherichia coli* are Strong Promoters that are Subject to Stringent Control	**R. Gafny, S. Cohen, N. Nachaliel and G. Glaser**	152–156
Transposable Group II Introns in Fission and Budding Yeast. Site-specific Genomic Instabilities and Formation of Group II IVS plDNAs	**W. M. Schmidt, R. J. Schweyen, K. Wolf and M. W. Mueller**	157–166
Structural Mimicry and Enhanced Immunogenicity of Peptide Epitopes Displayed on Filamentous Bacteriophage. The V3 Loop of HIV-1 gp120	**F. Di Marzo Veronese, A. E. Willis, C. Boyer-Thompson, E. Appella and R. N. Perham**	167–172

Helicity, Circular Dichroism and Molecular Dynamics of Proteins	**J. D. Hirst and C. L. Brooks III**	173–178
Articles		
Unwound Regions in Yeast Centromere IV DNA	**M. Tal, F. Shimron and G. Yagil**	179–189
Topological Scanning of the P1 Plasmid Partition Site	**F. Hayes and S. Austin**	190–198
Resolution of Immobile χ Structures by the FLP Recombinase of 2 μm Plasmid	**J. E. Dixon and P. D. Sadowski**	199–207
Hexameric Rings of *Escherichia coli* RuvB Protein. Cooperative Assembly, Processivity and ATPase Activity	**A. H. Mitchell and S. C. West**	208–215
Single Base-Pair Deletions Induced by Bleomycin at Potential Double-strand Cleavage Sites in the *aprt* Gene of Stationary Phase Chinese Hamster Ovary D422 Cells	**L. F. Povirk, R. A. O. Bennett, P. Wang, P. S. Swerdlow and M. J. F. Austin**	216–226
Caulobacter Flagellar Function, but not Assembly, Requires FliL, a Non-polarly Localized Membrane Protein Present in all Cell Types	**U. Jenal, J. White and L. Shapiro**	227–244
Domains of Interaction between Alpha Interferon and its Receptor Components	**G. Uzé, S. Di Marco, E. Mouchel-Vielh, D. Monneron, M.-T. Bandu, M. A. Horisberger, A. Dorques, G. Lutfalla and K. E. Mogensen**	245–257
Purification and DNA-Binding Activity of the PacA Subunit of the Bacteriophage P1 Pacase Enzyme	**K. Skorupski, N. Sternberg and B. Sauer**	258–267
Faithful Cleavage of the P1 Packaging Site (*pac*) Requires Two Phage Proteins, PacA and PacB, and Two *Escherichia coli* Proteins, IHF and HU	**K. Skorupski, B. Sauer and N. Sternberg**	268–282
Preparation, Characterization and Crystallization of an Antibody Fab Fragment that Recognizes RNA. Crystal Structures of Native Fab and Three Fab-mononucleotide Complexes	**P. R. Pokkuluri, F. Bouthillier, Y. Li, A. Kuderova, J. Lee and M. Cygler**	283–297
Drug–Protein Interactions: Refined Structures of Three Sulfonamide Drug Complexes of Human Carbonic Anhydrase I Enzyme	**S. Chakravarty and K. K. Kannan**	298–309
Rational Automatic Search Method for Stable Docking Models of Protein and Ligand	**M. Yamada Mizutani, N. Tomioka and A. Itai**	310–326
A Graph-theoretic Approach to the Identification of Three-dimensional Patterns of Amino Acid Side-chains in Protein Structures	**P. J. Artymiuk, A. R. Poirrette, H. M. Grindley, D. W. Rice and P. Willett**	327–344
Crystallization Notes		
Crystallization of *Ulex europaeus* Lectin I	**M. Vandonselaar and L. T. J. Delbaere**	345–346
Crystallization and Preliminary X-ray Analysis of a New Crystal form of Nitrite Reductase from *Pseudomonas aeruginosa*	**M. Tegoni, M. C. Silvestrini, V. S. Lamzin, M. Brunori and C. Cambillau**	347–350

Crystallization and Preliminary Crystallographic Characterization of Endo-polygalacturonase II from *Aspergillus niger* — K.-H. Schröter, A. Arkema, H. C. M. Kester, J. Visser and B. W. Dijkstra — 351–352

Crystallization and Preliminary X-ray Diffraction Study of the Nickel-binding Protein NikA of *Escherichia coli* — M.-H. Charon, L.-F. Wu, C. Piras, K. de Pina, M.-A. Mandrand-Berthelot and J. C. Fontecilla-Camps — 353–355

Sequence Notes

Cloning and mRNA Expression of Human Unconventional Myosin-IC: A Homologue of Amoeboid Myosins-I With a Single IQ Motif and an SH3 Domain — W. M. Bement, J. A. Wirth and M. S. Mooseker — 356–363

Revision in Sequence of CAD Aspartate Transcarbamylase Domain of *Drosophila* — J. N. Davidson and C. B. Kern — 364–366

Author Index — 367

Number 3, 28 October 1994

Review Article

Locations of Anti-AIDS Drug Binding Sites and Resistance Mutations in the Three-dimensional Structure of HIV-1 Reverse Transcriptase. Implications for Mechanisms of Drug Inhibition and Resistance — C. Tantillo, J. Ding, A. Jacobo-Molina, R. G. Nanni, P. L. Boyer, S. H. Hughes, R. Pauwels, K. Andries, P. A. J. Janssen, and E. Arnold — 369–387

Communication

New Alignment Strategy for Transmembrane Proteins — M. Cserzö, J.-M. Bernassau, I. Simon and B. Maigret — 388–396

Two Lines of Allosteric Communication in the Oligomeric Chaperonin GroEL are Revealed by the Single Mutation Arg196→Ala — O. Yifrach and A. Horovitz — 397–401

Articles

Mutations in Helix 34 of *Escherichia coli* 16 S Ribosomal RNA Have Multiple Effects on Ribosome Function and Synthesis — H. Moine and A. E. Dahlberg — 402–412

Transcription of the *xyl* Operon is Controlled in *Bacillus subtilis* by Tandem Overlapping Operators Spaced by Four Base-pairs — M. K. Dahl, J. Degenkolb and W. Hillen — 413–424

Sporulation Regulatory Protein SpoIIID from *Bacillus subtilis* Activates and Represses Transcription by Both Mother-cell-specific Forms of RNA Polymerase — R. Halberg and L. Kroos — 425–436

Processive Recombination by Wild-type Gin and an Enhancer-independent Mutant Insight into the Mechanisms of Recombination Selectivity and Strand Exchange — N. J. Crisona, R. Kanaar, T. N. Gonzalez, E. L. Zechiedrich, A. Klippel and N. R. Cozzarelli — 437–457

Solution Structure of a Parallel-Stranded Tetraplex Formed by d(TG_4T) in the Presence of Sodium Ions by Nuclear Magnetic Resonance Spectroscopy — F. Aboul-ela, A. I. H. Murchie, D. G. Norman and D. M. J. Lilley — 458–471

Mutational Analysis of the Fingers and Palm Subdomains of Human Immunodeficiency Virus Type-1 (HIV-1) Reverse Transcriptase	**P. L. Boyer, A. L. Ferris, P. Clark, J. Whitmer, P. Frank, C. Tantillo, E. Arnold and S. H. Hughes**	472–483
Recombination-like Structure of d(CCGCGG)	**L. Malinina, L. Urpí, X. Salas, T. Huynh-Dinh and J. A. Subirana**	484–493
Role of the Domain–Domain Interaction in the Construction of the Antigen Combining Site. A Comparative Study by ^{1}H-^{15}N Shift Correlation NMR Spectroscopy of the Fv and Fab Fragments of Anti-dansyl Mouse Monoclonal Antibody	**H. Takahashi, H. Tamura, N. Shimba, I. Shimada and Y. Arata**	494–503
The Role of Side-chain Hydrogen Bonds in the Formation and Stabilization of Secondary Structure in Soluble Proteins	**D. Bordo and P. Argos**	504–519
Tropomyosin Length and Two-stranded F-actin Flexibility in the Thin Filament	**R. Censullo and H. C. Cheung**	520–529
Crystallization Notes		
Crystallization and Preliminary X-ray Diffraction Studies of the Lepidopteran-specific Insecticidal Crystal Protein CrylA(a)	**S. Borisova, P. Grochulski, H. van Faassen, M. Pusztai-Carey, L. Masson and M. Cygler**	530–532
Crystallization and Molecular Packing Analysis of Barstar Crystals	**V. Raghunathan, S. Khurana, V. Gupta, R. Khurana, J. B. Udgaonkar and D. M. Salunke**	533–536
Sequence Note		
Premature Stop Codons Inactivate the RT6 Genes of the Human and Chimpanzee Species	**F. Haag, F. Koch-Nolte, M Kühl, S. Lorenzen and H.-G. Thiele**	537–546
Author Index		547–548

Number 4, 4 November 1994

Communications		
Sequences, Organization and Analysis of the *hupZMNOQRTV* Genes from the *Azotobacter chroococcum* Hydrogenase Gene Cluster	**L. Du, K. H. Tibelius, E. M. Souza, R. P. Garg and M. G. Yates**	549–557
Kinetic Analysis of the Catalysis of Strand Transfer From Internal Regions of Heteropolymeric RNA Templates by Human Immunodeficiency Virus Reverse Transcriptase	**J. J. DeStefano**	558–567
Human Immunodeficiency Virus Type 1 Tat Directs Transcription Through Attenuation Sites within the Mouse *c*-myc Gene	**S. Wright, X. Lu and B. M. Peterlin**	568–573
Position-based Sequence Weights	**S. Henikoff and J. G. Henikoff**	574–578
Articles		
OmpR Mutants Specifically Defective for Transcriptional Activation	**L. A. Pratt and T. J. Silhavy**	579–594

Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP). I. Saturation and Alanine-scanning Mutagenesis	**W. Niu, Y. Zhou, Q. Dong, Y. W. Ebright and R. H. Ebright**	595–602
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP). II. Role at Class I and Class II CAP-dependent Promoters	**Y. Zhou, T. J. Merkel and R. H. Ebright**	603–610
Thymine Starvation-induced Structural Changes in *Escherichia coli* DNA. Detection by Pulsed Field Gel Electrophoresis and Evidence for Involvement of Homologous Recombination	**K. Nakayama, K. Kusano, N. Irino and H. Nakayama**	611–620
Energy Coupling in an Ion Pump The Reprotonation Switch of Bacteriorhodopsin	**M. Kataoka, H. Kamikubo, F. Tokunaga, L. S. Brown, Y. Yamazaki, A. Maeda, M. Sheves, R. Needleman and J. K. Lanyi**	621–638
The Characterisation of p53 Binding Phage Isolated from Phage Peptide Display Libraries	**D. A. Daniels and D. P. Lane**	639–652
Crystal Structure of Cytochrome c_3 from *Desulfovibrio desulfuricans* Norway at 1·7 Å Resolution	**M. Czjzek, F. Payan, F. Guerlesquin, M. Bruschi and R. Haser**	653 667
Exploring Conformational Space with a Simple Lattice Model for Protein Structure	**D. A. Hinds and M. Levitt**	668 -682
Refined Crystal Structure of the 2[4Fe-4S] Ferredoxin from *Clostridium acidurici* at 1.84 Å Resolution	**E. D. Duée, E. Fanchon, J. Vicat, L. C. Sieker, J. Meyer and J.-M. Moulis**	683–695
Protein Three-dimensional Structure Determination and Sequence-specific Assignment of ^{13}C and ^{15}N-separated NOE Data. A Novel Real-space *ab initio* Approach	**P. J. Kraulis**	696–718
Proton NMR Studies of the Structural and Dynamical Effect of Chemical Modification of a Single Aromatic Side-chain in a Snake Cardiotoxin. Relation to the Structure of the Putative Binding Site and the Cytolytic Activity of the Toxin	**C. Roumestand, B. Gilquin, O. Trémeau, E. Gatineau, L. Mouawad, A. Ménez and F. Toma**	719–735
Stabilization of a Type VI Turn in a Family of Linear Peptides in Water Solution	**J. Yao, V. A. Feher, B. F. Espejo, M. T. Reymond, P. E. Wright and H. J. Dyson**	736–753
Three-dimensional Structure of a Type VI Turn in a Linear Peptide in Water Solution. Evidence for Stacking of Aromatic Rings as a Major Stabilizing Factor	**J. Yao, H. J. Dyson and P. E. Wright**	754–766
Three-dimensional Structures of the Free and the Antigen-complexed Fab from Monoclonal Anti-lysozyme Antibody D44.1	**B. C. Braden, H. Souchon, J.-L. Eiselé, G. A. Bentley, T. N. Bhat, J. Navaza and R. J. Poljak**	767–781
Studies of the Interactions Between *Escherichia coli* Ribonuclease HI and Its Substrate	**Y. Uchiyama, Y. Miura, H. Inoue, E. Ohtsuka, Y. Ueno, M. Ikehara and S. Iwai**	782–791

Crystallization Notes

The Characterization and Crystallization of a Virally Encoded *Ustilago maydis* KP4 Toxin — **F. Gu, T. S. Sullivan, Z. Che, C. Ganesa, W. H. Flurkey, R. F. Bozarth and T. J. Smith** — 792–795

Preliminary X-ray Diffraction Analysis of Crystals of the P_{II} Protein from *Escherichia coli* — **V. S. J. de Mel, E. S. Kamberov, P. D. Martin, J. Zhang, A. J. Ninfa and B. F. P. Edwards** — 796–798

Preliminary Crystallographic Analysis of 4-Oxalocrotonate Tautomerase Reveals the Oligomeric Structure of the Enzyme — **D. I. Roper, H. S. Subramanya, V. Shingler and D. B. Wigley** — 799–801

Crystallization of Mitochondrial Cytochrome b-c_1 Complex from Gel With or Without Reduced Pressure — **C.-A. Yu, D. Xia, J. Deisenhofer and L. Yu** — 802–805

Crystallization and Preliminary X-ray Crystallographic Studies of Thermostable Xylanase Crystals Isolated from *Paecilomyces varioti* — **S. Eswaramoorthy, P. J. Vithayathil and M. A. Viswamitra** — 806–808

Author Index — 809–810

Number 5, 11 November 1994

Communications

Identification of Recognition Elements on Bacteriophage Qβ Minus Strand RNA that are Essential for Template Activity with Qβ Replicase — **D. Schuppli, I. Barrera and H. Weber** — 811–815

Neural Network Model of the Genetic Code is Strongly Correlated to the GES Scale of Amino Acid Transfer Free Energies — **N. Tolstrup, J. Toftgård, J. Engelbrecht and S. Brunak** — 816–820

Articles

DNA-Dependent Renaturation of an Insoluble DNA Binding Protein. Identification of the RhaS Binding Site at *rhaBAD* — **S. M. Egan and R. F. Schleif** — 821–829

A Quaternary Transcription Termination Complex. Reciprocal Stabilization by Rho Factor and NusG Protein — **K. W. Nehrke and T. Platt** — 830–839

Yeast TBP can Replace its Human Homologue in the RNA Polymerase I-specific Multisubunit Factor SL1 — **U. Rudloff, H. G. Stunnenberg, M. Keaveney and I. Grummt** — 840–845

Structural Characteristics of the Stable RNA Introns of Archaeal Hyperthermophiles and their Splicing Junctions — **J. Lykke-Andersen and R. A. Garrett** — 846–855

Crystal Structure of the Mutant D52S Hen Egg White Lysozyme with an Oligosaccharide Product — **A. T. Hadfield, D. J. Harvey, D. B. Archer, D. A. MacKenzie, D. J. Jeenes S. E. Radford, G. Lowe, C. M. Dobson and L. N. Johnson** — 856–872

Refined X-ray Structure of *Dictyostelium discoideum* Nucleoside Diphosphate Kinase at 1.8 Å resolution — **S. Moréra, G. LeBras, I. Lascu, M. L. Lacombe, M. Véron and J. Janin** — 873–890

Refined Structure of the Porin from *Rhodopseudomonas blastica*. Comparison with the Porin from *Rhodobacter capsulatus* — A. Kreusch and G. E. Schulz — 891–905

The Third IgG-Binding Domain from Streptococcal Protein G. An Analysis by X-ray Crystallography of the Structure Alone and in a Complex with Fab — J. P. Derrick and D. B. Wigley — 906–918

Excess Counterion Accumulation around Branched Nucleic Acids — M. C. Olmsted and P. J. Hagerman — 919–929

The Processive Reaction Mechanism of Ribonuclease II — V. J. Cannistraro and D. Kennell — 930–943

Crystallization Note

Crystallization and Preliminary X-ray Analysis of a Mutant Duck δ II Crystallin — M. Abu-Abed, M. A. Turner, J. Atkinson, K. Dole and P. L. Howell — 944–946

Crystallization and Preliminary X-ray Analysis of Recombinant 1-Aminocyclopropane-1-carboxylate Synthase from Apple. A Key Enzyme in the Biosynthesis of the Plant Hormone Ethylene — E. Hohenester, M. F. White, J. F. Kirsch and J. N. Jansonius — 947–949

Sequence Note

Sequence Analysis Identifies the Proline Dehydrogenase and Δ^1-Pyrroline-5-carboxylate Dehydrogenase Domains of the Multifunctional *Escherichia coli* PutA Protein — M. Ling, S. W. Allen and J. M. Wood — 950–956

Author Index — 957–958

List of Contents Volume 244

Number 1, 18 November 1994

Communications

11-fold Symmetry of the *trp* RNA-binding Attenuation Protein (TRAP) from *Bacillus subtilis* Determined by X-ray Analysis — A. A. Antson, A. M. Brzozowski, E. J. Dodson, Z. Dauter, K. S. Wilson, T. Kurecki, J. Otridge and P. Gollnick — 1–5

The Thumb's Knuckle. Flexibility in the Thumb Subdomain of T7 RNA Polymerase is Revealed by the Structure of a Chimeric T7/T3 RNA Polymerase — R. Sousa, J. Rose and B. C. Wang — 6–12

Articles

Molecular Modeling of RNA Polymerase II Mutations onto DNA Polymerase I — W. J. Kim, L. P. Burke and M. A. Mortin — 13–22

Relative Contributions of the Zinc Fingers of Transcription Factor IIIA to the Energetics of DNA Binding — K. R. Clemens, P. Zhang, X. Liao, S. J. McBryant, P. E. Wright and J. M. Gottesfeld — 23–35

Stability of *Escherichia coli* Transcription Complexes Near an Intrinsic Terminator — K. S. Wilson and P. H. von Hippel — 36–51

Structure-mapping of the Hairpin Ribozyme Magnesium-dependent Folding and Evidence for Tertiary Interactions within the Ribozyme-Substrate Complex	**S. E. Butcher and J. M. Burke**	52–63
Conformation and Fibrillogenesis of Alzheimer Aβ Peptides with Selected Substitution of Charged Residues	**P. E. Fraser, D. R. McLachlan, W. K. Surewicz, C. A. Mizzen, A. D. Snow, J. T. Nguyen and D. A. Kirschner**	64–73
Mutational and Structural Analysis of the RNA Binding Site for *Escherichia coli* Ribosomal Protein S7	**F. Dragon, C. Payant and L. Brakier-Gingras**	74–85
Structure of the Sulfide-reactive Hemoglobin from the Clam *Lucina pectinata*: Crystallographic Analysis at 1.5 Å Resolution	**M. Rizzi, J. B. Wittenberg, A. Coda, M. Fasano, P. Ascenzi and M. Bolognesi**	86–99
Measurement of the Hemoglobin Concentration in Deoxyhemoglobin S Polymers and Characterization of the Polymer Water Compartment	**R. M. Bookchin, T. Balazs and V. L. Lew**	100–109
Crystallization Notes		
Crystallization of the Macromolecular Complex Transthyretin-Retinol-binding Protein	**H. L. Monaco, F. Mancia, M. Rizzi and A. Coda**	110–113
Crystallization and X-ray Crystallographic Analysis of Recombinant Chicken Poly (ADP-ribose) Polymerase Catalytic Domain Produced in Sf9 Insect Cells	**S. Jung, E. A. Miranda, J. M. de Murcia, C. Niedergang, M. Delarue, G. E. Schulz and G. M. de Murcia**	114–116
Sequence Notes		
Isolation and Characterization of α-Type HC3 and β-Type HC5 Subunit Genes of Human Proteasomes	**T. Tamura, F. Osaka, Y. Kawamura, T. Higuti, N. Ishida, H.-G. Nothwang, C. Tsurumi, K. Tanaka and A. Ichihara**	117–124
Computer Analysis of Bacterial Haloacid Dehalogenases Defines a Large Superfamily of Hydrolases with Diverse Specificity Application of an Iterative Approach to Database Search	**E. V. Koonin and R. L. Tatusov**	125–132
Author Index		133

Number 2, 25 November 1994

Communication		
Sequence Elements Responsible for DNA Curvature	**T. E. Haran, J D. Kahn and D. M. Crothers**	135–143
Articles		
Control of Translation by mRNA Secondary Structure in *Escherichia coli*. A Quantitative Analysis of Literature Data	**M. H. de Smit and J. van Duin**	144–150
Cross-hypersensitivity Effects of Mutations in 23 S rRNA Yield Insight into Aminoacyl-tRNA Binding	**A. S. Mankin, I. Leviev and R. A. Garrett**	151–157

Synthesis and Recognition of Aspartyl-adenylate by *Thermus thermophilus* Aspartyl-tRNA Synthetase — **A. Poterszman, M. Delarue, J.-C. Thierry and D. Moras** — 158–167

Alignment of Beta-barrels in $(\beta/\alpha)_8$ Proteins using Hydrogen-bonding Pattern — **Yu. Sergeev and B. Lee** — 168–182

Solution Structure of Carbonmonoxy Myoglobin Determined from Nuclear Magnetic Resonance Distance and Chemical Shift Constraints — **K. Ösapay, Y. Theriault, P. E. Wright and D. A. Case** — 183–197

Three-dimensional Structure of the Human Immunodeficiency Virus Type 1 Matrix Protein — **M. A. Massiah, M. R. Starich, C. M. Paschall, M. F. Summers, A. M. Christensen and W. I. Sundquist** — 198–223

Characterization of the Tryptophan Fluorescence and Hydrodynamic Properties of Rat DNA Polymerase β — **S.-J. Kim, M. S. Lewis, J. R. Knutson, D. K. Porter, A. Kumar and S. H. Wilson** — 224–235

Crystallization Notes

Crystallization and Preliminary X-ray Analysis of the Major Cellulose-binding Domain of the Cellulosome from *Clostridium thermocellum* — **R. Lamed, J. Tormo, A. J. Chirino, E. Morag and E. A. Bayer** — 236–237

New Crystal Forms and Preliminary X-ray Diffraction Studies of Mitochondrial Cytochrome bc_1 Complex from Bovine Heart — **M. Kawamoto, T. Kubota, T. Matsunaga, K. Fukuyama, H. Matsubara, K. Shinzawa-Itoh and S. Yoshikawa** — 238–241

Sequence Note

Structure and Transcription of the L11-L1-L10-L12 Ribosomal Protein Gene Operon from the Extreme Thermophilic Archaeon *Sulfolobus acidocaldarius* — **C. Ramírez, L. C. Shimmin, P. Leggatt and A. T. Matheson** — 242–249

Erratum — 251

Author Index — 253

Number 3, 2 December 1994

Communications

Fungal Virus Capsids are Cytoplasmic Compartments for the Replication of Double-stranded RNA, Formed as Icosahedral Shells of Asymmetric Gag Dimers — **R. H. Cheng, J. R. Caston, G.-J. Wang, F. Gu, T. J. Smith, T. S. Baker, R. F. Bozarth, B. L. Trus, N. Cheng, R. B. Wickner and A. C. Steven** — 255–258

The Unusual Structure of the Human Centromere $(GGA)_2$ Motif. Unpaired Guanosine Residues Stacked Between Sheared G·A Pairs — **S.-H. Chou, L. Zhu and B. R. Reid** — 259–268

Articles

Dependence of Lactose Metabolism Upon Mutarotase Encoded in the *gal* Operon in *Escherichia coli* — **G. G. Bouffard, K. E. Rudd and S. L. Adhya** — 269–278

Crystal Structure of Bacteriophage fr Capsids at 3.5 Å Resolution — **L. Liljas, K. Fridborg, K. Valegård, M. Bundule and P. Pumpens** — 279–290

Calcium Ion-induced Structural Changes in Bacteriophage ϕX174	**L. L. Ilag, R. McKenna, M. P. Yadav, J. N. BeMiller, N. L. Incardona and M. G. Rossman**	291–300
Site-Directed Mutagenesis and ^{1}H Nuclear Magnetic Resonance of an Anti-Dinitrophenyl Spin Label Antibody	**M. Martinez-Yamout and H. M. McConnell**	301–318
Chaperone-dependent Folding and Activation of Ribosome-bound Nascent Rhodanese. Analysis by Fluorescence	**W. Kudlicki, O. W. Odom, G. Kramer and B. Hardesty**	319–331
Structural Features can be Unconserved in Proteins with Similar Folds. An Analysis of Side-chain to Side-chain Contacts, Secondary Structure and Accessibility	**R. B. Russell and G. J. Barton**	332–350
Author Index		351

Number 4, 9 December 1994

Articles

Selection of Phage-displayed Antibodies Specific for a Cytoskeletal Antigen by Competitive Elution with a Monoclonal Antibody	**E. V. Meulemans, R. Slobbe, P. Wasterval, F. C. S. Ramaekers and G. J. J. M. van Eys**	353–360
Isolation of a Peptide Antagonist to the Thrombin Receptor using Phage Display	**J. Doorbar and G. Winter**	361–369
Nuclear Magnetic Resonance ^{15}N and ^{1}H Resonance Assignments and Global Fold of Rusticyanin. Insights into the Ligation and Acid Stability of the Blue Copper Site	**A. H. Hunt, A. Toy-Palmer, N. Assa-Munt, J. Cavanagh, R. C. Blake II and H. J. Dyson**	370–384
The Molecular Replacement Solution and X-ray Refinement to 2.8 Å of a Decameric Complex of Human Cyclophilin A with the Immunosuppressive Drug Cyclosporin A	**G. M. Pflügl, J. Kallen, J. N. Jansonius and M. D. Walkinshaw**	385–409
X-ray Structure of Recombinant Ricin A-Chain at 1.8 Å Resolution	**S. A. Weston, A. D. Tucker, D. R. Thatcher, D. J. Derbyshire and R. A. Pauptit**	410–422
A Unique Protonated Phosphate Group in Bone Mineral Not Present in Synthetic Calcium Phosphates. Identification by Phosphorus-31 Solid State NMR Spectroscopy	**Y. Wu, M. J. Glimcher, C. Rey and J. L. Ackerman**	423–435
Stability against Denaturation Mechanisms in Halophilic Malate Dehydrogenase "Adapt" to Solvent Conditions	**F. Bonneté, D. Madern and G. Zaccaï**	436–447
Analysis and Classification of Disulphide Connectivity in Proteins. The Entropic Effect of Cross-linkage	**P. M. Harrison and M. J. E. Sternberg**	448–463

Crystallization Notes

Crystallization and Preliminary X-ray Diffraction Characterisation of Both a Native and Selenomethionyl VLA-4 Binding Fragment of VCAM-1	**M. J. Bottomley, R. C. Robinson P. C. Driscoll, K. Harlos, D. I. Stuart R. T. Aplin, J. M. Clements E. Y. Jones and T. J. Dudgeon**	464–468

Crystallization and Preliminary Crystallographic Data for Rab Guanine Nucleotide Dissociation Inhibitor (RabGDI) from Bovine Brain — I. J. Schalk, E. A. Stura, J. Matteson, I. A. Wilson and W. E. Balch — 469–473

Author Index — 475–476

Number 5, 16 December 1994

Communication

Transmembrane Signaling. Mutational Analysis of the Cytoplasmic Linker Region of Taz1-1, a Tar-EnvZ Chimeric Receptor in *Escherichia coli* — T. Jin and M. Inouye — 477–481

Articles

RNA Chain Elongation and Termination by Mammalian RNA Polymerase III. Analysis of tRNA Gene Transcription by Imposing a Reversible Factor-mediated Block to Elongation using a Sequence-specific DNA Binding Protein — D. E. Syroid and J. P. Capone — 482–493

DNA Conformational Changes Associated with the Cooperative Binding of cI-repressor of Bacteriophage λ to O_R — D. Strahs and M. Brenowitz — 494–510

Cleavage Site Selection by M1 RNA, the Catalytic Subunit of *Escherichia coli* RNase P, is influenced by pH — J. Kufel and L. A. Kirsebom — 511–521

Structural Changes of Active Site Cleft and Different Saccharide Binding Modes in Human Lysozyme Co-crystallized with Hexa-*N*-acetyl-chitohexaose at pH 4.0 — H. Song, K. Inaka, K. Maenaka and M. Matsushima — 522–540

Structure Determination of Aquomet Porcine Hemoglobin at 2.8 Å Resolution — D. S. Katz, S. P. White, W. Huang, R. Kumar and D. W. Christianson — 541–553

Investigating the High Affinity and Low Sequence Specificity of Calmodulin Binding to its Targets — M. Afshar, L. S. D. Caves, L. Guimard, R. E. Hubbard, B. Calas, G. Grassy and J. Haiech — 554–571

Bases Defining an Ammonium and Magnesium Ion-Dependent Tertiary Structure Within the Large Subunit Ribosomal RNA — M. Lu and D. E. Draper — 572–585

Structure of Protocatechuate 3,4-Dioxygenase from *Pseudomonas aeruginosa* at 2.15 Å Resolution — D. H. Ohlendorf, A. M. Orville and J. D. Lipscomb — 586–608

Toward a Mechanism for the Allosteric Transition of Pig Kidney Fructose-1,6-Bisphosphatase — Y. Zhang, J.-Y. Liang, S. Huang and W. N. Lipscomb — 609–624

TEM β-Lactamase Mutants Hydrolysing Third-generation Cephalosporins. A Kinetic and Molecular Modelling Analysis — X. Raquet, J. Lamotte-Brasseur, E. Fonzé, S. Goussard, P. Courvalin and J. M. Frère — 625–639

Three-dimensional Reconstruction from a Frozen-hydrated Specimen of the Chiton *Lepidochiton sp.* Hemocyanin — O. Lambert, N. Boisset, J.-C. Taveau and J. N. Lamy — 640–647

Crystallization Notes

Purification, Crystallization and Preliminary X-ray Diffraction Studies of Alpha-Toxin of *Clostridium perfringens*	**A. K. Basak, D. I. Stuart, T. Nikura, D. H. L. Bishop, D. C. Kelly, A. Fearn and R. W. Titball**	648–650
Crystallization and Preliminary X-ray Diffraction Studies on ADP-ribosylation Factor 1	**S. Greasley, H. Jhoti, A. C. Fensome, S. Cockcroft, G. M. H. Thomas and B. Bax**	651–653
Crystallization and Preliminary X-ray Studies of the Diphtheria *Tox* Repressor from *Corynebacterium diphtheriae*	**N. Schiering, X. Tao, J. R. Murphy, G. A. Petsko and D. Ringe**	654–656
Crystallization and Preliminary Crystallographic Data of Recombinant Human Osteogenic Protein-1 (hOP-1)	**D. L. Griffith, H. Oppermann, D. C. Rueger, T. K. Sampath, R. F. Tucker and W. D. Carlson**	657–658
Expression, Crystallization and Preliminary Crystallographic Analysis of Human Carbonyl Reductase	**K. M. Bohren, B. Wermuth, D. Harrison, D. Ringe, G. A. Petsko and K. H. Gabbay**	659–664

Sequence Note

Characterization by cDNA Cloning of Two New Human Protein Kinases Evidence by Sequence Comparison of a New Family of Mammalian Protein Kinases	**J. Hanes, H. von der Kammer, J. Klaudiny and K. H. Scheit**	665–672

Author Index 673–674

Keyword Index

I-and *B*-DNA in the same sequence
A Single 2′-Hydroxyl Group Converts *B*-DNA to *A*-DNA. Crystal Structure of the DNA-RNA Chimeric Decamer Duplex d(CCGGC)r(G)d(CCGG) with a Novel Intermolecular G·C Base-paired Quadruplet, **236**, 275–285.

Abasic sites
Unusual Kinetics of Uracil Formation in Single and Double-stranded DNA by Deamination of Cytosine in Cyclobutane Pyrimidine Dimers, **235**, 807–812.
Coding Properties of a Unique Apurinic/Apyrimidinic Site Replicated in Mammalian Cells, **240**, 416–420.

A)BC exinuclease
Flow Linear Dichroism and Electron Microscope Analysis of Protein–DNA Complexes of a Mutant UvrB Protein that Binds to but cannot Kink DNA, **241**, 645–650.

Abortive initiation
An *Escherichia coli* RNA Polymerase Defective in Transcription due to its Overproduction of Abortive Initiation Products, **236**, 72–80.

Abrin-a
A New Crystal Form of Abrin-a from the Seeds of *Abrus precatorius*, **235**, 1152–1153.

Abrus precatorius
A New Crystal Form of Abrin-a from the Seeds of *Abrus precatorius*, **235**, 1152–1153.

Acanthamoeba
The Ribosomal RNA Gene Region in *Acanthamoeba castellanii* Mitochondrial DNA. A Case of Evolutionary Transfer of Introns between Mitochondria and Plastids?, **239**, 476–499.

Accessibility
Comparison of Surface Accessible Residues in Human and Murine Immunoglobulin Fv Domains. Implication for Humanization of Murine Antibodies, **235**, 959–973.

Accessible surface area
Domain Structure of the Fib-1 and Fib-2 Regions of Human Fibronectin. Thermodynamic Properties of the Type I Finger Module, **238**, 833–844.

Accuracy
An Assessment of the Precision and Accuracy of Protein Structures Determined by NMR. Dependence on Distance Errors, **239**, 601–607.

Acetohydroxy acid isomeroreductase
Crystallization and Preliminary Crystallographic Data for Acetohydroxy Acid Isomeroreductase from *Spinacia oleracea*, **242**, 578–581.

Acetyl CoA carboxylase
Preliminary X-ray Crystallographic Analysis of Biotin Carboxylase Isolated from *Escherichia coli*, **235**, 367–369.

***N*-2-acetylaminofluorene**
Effect of Single DNA Lesions on *in Vitro* Replication with DNA Polymerase III Holoenzyme. Comparison with other Polymerases, **236**, 151–164.

Acetylation
Nucleosome Structural Changes Due to Acetylation, **236**, 685–690.

Acetylcholine transporter
Alternative Splicing Leads to Two Cholinergic Proteins in *Caenorhabditis elegans*, **241**, 627–630.

Acetylglucosamine oligosaccharide complexes
^{1}H Nuclear Magnetic Resonance Studies of Hen Lysozyme-*N*-Acetylglucosamine Oligosaccharide Complexes in Solution. Application of Chemical Shifts for the Comparison of Conformational Changes in Solution and in the Crystal, **235**, 1072–1087.

***N*-Acetyllactosamine-lectin complex**
Crystallization and Preliminary X-ray Diffraction Studies of the Soluble 14 kDa β-Galactoside-binding Lectin from Bovine Heart, **235**, 787–789.

Acid phosphatase
Crystallization and Preliminary X-ray Analysis of the Low Molecular Weight Phosphotyrosyl Protein Phosphatase from Bovine Heart, **238**, 281–283.

Acidic fibroblast growth factor
^{1}H-NMR Assignment and Solution Structure of Human Acidic Fibroblast Growth Factor Activated by Inositol Hexasulfate, **242**, 81–98.

Acidosis and hypercloruremia
Synergistic Modulation by Chloride and Organic Phosphates of Hemoglobin from Bear (*Ursus arctos*), **236**, 1401–1406.

Acinetobacter calcoaceticus
Crystallization and Preliminary X-ray Analysis of Protocatechuate 3,4-Dioxygenase from *Acinetobacter calcoaceticus*, **236**, 372–373.

Aconitase
Crystal Structures of Aconitase with *Trans*-aconitate and Nitrocitrate Bound, **237**, 437–451.

Actin
see also F-actin.
Identification of a Divergent Actin-related Protein in *Drosophila*, **235**, 1351–1356.
Equatorial A-band and I-band X-ray Diffraction from Relaxed and Active Fish Muscle. Further Details of Myosin Crossbridge Behaviour, **239**, 500–512.
Crystallization and Structure Determination of Bovine Profilin at 2·0 Å Resolution, **240**, 459–475.
Genes Encoding Actin-related Proteins of *Drosophila melanogaster*, **241**, 498–503.
Determination of Electrostatic Potential Around Specific Locations on the Surface of Actin by Diffusion-enhanced Fluorescence Resonance Energy Transfer, **241**, 714–731.
Towards Atomic Interpretation of F-Actin Filament Three-dimensional Reconstructions, **242**, 683–700.
Cloning and mRNA Expression of Human Unconventional Myosin-IC. A Homologue of Amoeboid Myosins-I With a Single IQ Motif and an SH3 Domain, **243**, 356–363.
Tropomyosin Length and Two-stranded F-actin Flexibility in the Thin Filament, **243**, 520–529.

Actin-related protein
Identification of a Divergent Actin-related Protein in *Drosophila*, **235**, 1351–1356.
Genes Encoding Actin-related Proteins of *Drosophila melanogaster*, **241**, 498–503.

Activating regions
see also Transcription activation.
Transcription Activation by the *Escherichia coli* Cyclic AMP Receptor Protein. Receptors Bound in Tandem at Promoters Can Interact Synergistically, **241**, 341–352.

Activation energy
The Proton Transfers in the Cytoplasmic Domain of Bacteriorhodopsin are Facilitated by a Cluster of Interacting Residues, **239**, 401–414.
Stability of *Escherichia coli* Transcription Complexes Near an Intrinsic Terminator, **244**, 36–51.

Active centre
High Resolution Structures of Holo and Apo Formate Dehydrogenase, **236**, 759–785.

Active site
Refined 1·7 Å X-ray Crystallographic Structure of P-30 Protein, an Amphibian Ribonuclease with Anti-tumor Activity, **236**, 1141–1153.
(His)C^{ε}-H···O=C< Hydrogen Bond in the Active Sites of Serine Hydrolases, **241**, 83–93.

Activity of enzyme, *see* Enzyme activity

Acyltransferase
Crystallization of the Malonyl Coenzyme A–Acyl Carrier Protein Transacylase from *Escherichia coli*, **242**, 99–102.

***S*-adenosyl-L-methionine**
Ligand-induced Conformational States of the Cytosine-specific DNA methyltransferase M.*Hga*I-2, **235**, 545–553.
The Domains of a Type I DNA Methyltransferase. Interactions and Role in Recognition of DNA Methylation, **236**, 1011–1021.
Interaction of *EcoP15I* DNA Methyltransferase with Oligonucleotides Containing the Asymmetric Sequence 5′-CAGCAG-3′, **242**, 378–388.

Adenovirus
Structural Study of the 5′ End of a Synthetic Premessenger RNA from Adenovirus. Evidence for a Long-range Exon-Intron Interaction, **240**, 205–225.
The Refined Crystal Structure of Hexon, the Major Coat Protein of Adenovirus Type 2, at 2·9 Å Resolution, **242**, 430–455.

Adhesin
Filamentous Hemagglutinin of *Bordetella pertussis*. A Bacterial Adhesin Formed as a 50-nm Monomeric Rigid Rod Based on a 19-residue Repeat Motif Rich in Beta Strands and Turns, **241**, 110–124.

Adhesion molecule
Crystallization and Preliminary X-ray Diffraction Characterisation of both a Native and Selenomethionyl VLA-4 Binding Fragment of VCAM-1, **244**, 464–468.

ADP-ribosylation factor 1
Crystallization and Preliminary X-ray Diffraction Studies on ADP-ribosylation Factor 1, **244**, 651–653.

Aedes aegypti
Analysis of Mosquito Vitellogenin cDNA. Similarity with Vertebrate Phosvitins and Arthropod Serum Proteins, **237**, 641–647.

Aerobactin
The Organization of Intercistronic Regions of the Aerobactin Operon of pColV-K30 may Account for the Differential Expression of the *iucABCD iutA* Genes, **238**, 288–293.

Aeromonas
Mutagenesis of the Paracrystalline Surface Protein Array of *Aeromonas salmonicida* by Endogenous Insertion Elements, **237**, 452–463.

Affinity enhancement
Site-Directed Mutagenesis and ^{1}H Nuclear Magnetic Resonance of an Anti-Dinitrophenyl Spin Label Antibody, **244**, 301–318.

Affinity enrichment
Enrichment of Human DNAs that Flank Poly(dA)·poly(dT) Tracts by Triplex DNA Formation, **237**, 193–200.

Aging
DNA Double-strand Break *in vivo* at the 3′ Extremity of Exons Located Upstream of Group II Introns. Senescence and Circular DNA Introns in *Podospora* Mitochondria, **242**, 630–643.

AIDS
Alternative Native Flap Conformation Revealed by 2·3 Å Resolution Structure of SIV Proteinase, **239**, 97–103.
Crystallization and Preliminary X-ray Investigation of Recombinant Simian Immunodeficiency Virus Matrix Protein, **241**, 744–746.
Crystals of HIV-1 Reverse Transcriptase Diffracting to 2·2 Å Resolution, **242**, 586–588.
Locations of Anti-AIDS Drug Binding Sites and Resistance Mutations in the Three-dimensional Structure of HIV-1 Reverse Transcriptase. Implications for Mechanisms of Drug Inhibition and Resistance, **243**, 369–387.

Alanine scanning
Formation of a Hydrophobic Cluster in Denatured Bovine Pancreatic Trypsin Inhibitor, **236**, 412–420.

A-layer
Mutagenesis of the Paracrystalline Surface Protein Array of *Aeromonas salmonicida* by Endogenous Insertion Elements, **237**, 452–463.

Alcohol dehydrogenase
Crystallization and Preliminary Crystallographic Studies of *Saccharomyces cerevisiae* Alcohol Dehydrogenase I, **235**, 777–779.
Structures of Three Human β Alcohol Dehydrogenase Variants. Correlations with their Functional Differences, **239**, 415–429.

Aldehyde dehydrogenase
Crystallization and Preliminary X-ray Diffraction Studies on Cytosolic (Class 1) Aldehyde Dehydrogenase from Sheep Liver, **241**, 263–264.

Aldose
Dependence of Lactose Metabolism upon Mutarotase Encoded in the *gal* Operon in *Escherichia coli*, **244**, 269–278.

Algorithms
Satisfying Hydrogen Bonding Potential in Proteins, **238**, 777–793.
Detecting Patterns in Protein Sequences, **239**, 698–712.

Alkalophilic *Bacillus*
Crystallization and Preliminary X-ray Studies of Cyclodextrin Glucanotransferase from Alkalophilic *Bacillus* sp. 1011, **237**, 163–164.

Allosteric enzymes
A Regular 1 : 1 Complex of Two Allosteric States in the Single Crystal of L-Lactate Dehydrogenase from *Bifidobacterium longum*, **236**, 958–959.
The Crystallization and Preliminary X-ray Analysis of Allosteric Chorismate Mutase, **241**, 273–274.
Toward a Mechanism for the Allosteric Transition of Pig Kidney Fructose-1,6-Bisphosphatase, **244**, 609–624.

Allosteric regulation
The Role of Glu187 in the Regulation of Phosphofructokinase by Phosphoenolpyruvate, **235**, 68–72.
The Chloride Effect in Human Haemoglobin. A New Kind of Allosteric Mechanism, **239**, 555–560.

Allostery
The 1·9 Å Structure of Deoxyβ_4 Hemoglobin. Analysis of the Partitioning of Quaternary-associated and Ligand-induced Changes in Tertiary Structure, **236**, 831–843.
Allosteric Activation in *Bacillus stearothermophilus* Lactate Dehydrogenase Investigated by an X-ray Crystallographic Analysis of a Mutant Designed to Prevent Tetramerization of the Enzyme, **238**, 615–625.
Chloride Masks Effects of Opposing Positive Charges in Hb A and Hb Hinsdale (β139 Asn→Lys) that can Modulate Cooperativity as well as Oxygen Affinity, **239**, 561–568.
The Activation of *Escherichia coli* Aspartate Transcarbamylase by ATP. Specific Involvement of Helix H2′ at the Hydrophobic Interface Between the Two Domains of the Regulatory Chains, **242**, 139–149.
Two Lines of Allosteric Communication in the Oligomeric Chaperonin GroEL are Revealed by the Single Mutation Arg196→Ala, **243**, 397–401.

Alpha subunit
OmpR Mutants Specifically Defective for Transcriptional Activation, **243**, 579–594.

Alphaherpes virinae
Molecular Phylogeny of the Alphaherpesvirinae Subfamily and a Proposed Evolutionary Timescale, **238**, 9–22.

Alternative splicing
see also Splicing.
The Genes for Transcription Factor Nuclear Factor I Give Rise to Corresponding Splice Variants between Vertebrate Species, **238**, 860–865.
Kinesin Light Chain Isoforms in *Caenorhabditis elegans*, **240**, 507–512.
Alternative Splicing Leads to Two Cholinergic Proteins in *Caenorhabditis elegans*, **241**, 627–630.
An Alternative Splicing Modifies the C-Terminal End of Tryptophanyl-tRNA Synthetase in Murine Embryonic Stem Cells, **242**, 599–603.
Characterization by cDNA Cloning of Two New Human Protein Kinases. Evidence by Sequence Comparison of a New Family of Mammalian Protein Kinases, **244**, 665–672.

Alzheimer's disease
Conformation and Fibrillogenesis of Alzheimer Aβ Peptides with Selected Substitution of Charged Residues, **244**, 64–73.

Ami system
Three Highly Homologous Membrane-bound Lipoproteins Participate in Oligopeptide Transport by the Ami System of the Gram-positive *Streptococcus pneumoniae*, **241**, 44–58.

Amicetin
Cross-hypersensitivity Effects of Mutations in 23 S rRNA Yield Insight into Aminoacyl-tRNA Binding, **244**, 151–157.

Amicyanin
Crystal Structure Analysis and Refinement at 2·15 Å Resolution of Amicyanin, a Type I Blue Copper Protein, from *Thiobacillus versutus*, **236**, 1196–1211.
Solution Structure of the Type 1 Blue Copper Protein Amicyanin from *Thiobacillus versutus*, **240**, 358–371.

Amidase
Crystallization and Preliminary Crystallographic Analysis of Peptide-N^4-(*N*-acetyl-β-D-glucosaminyl)asparagine Amidase PNGase F, **241**, 622–623.

Amide hydrolysis
Catalytic Antibody Model and Mutagenesis Implicate Arginine in Transition-state Stabilization, **235**, 1098–1116.

Amidohydrolase
Crystallization and Preliminary Crystallographic Analysis of Peptide-N^4-(*N*-acetyl-β-D-glucosaminyl)asparagine Amidase PNGase F, **241**, 622–623.

Amino acid
Conservation of a Transcription Antitermination Mechanism in Aminoacyl-tRNA Synthetase and Amino Acid Biosynthesis Genes in Gram-positive Bacteria, **235**, 798–804.
Synthesis and Recognition of Aspartyl-adenylate by *Thermus thermophilus* Aspartyl-tRNA Synthetase, **244**, 158–167.

Amino acid sequence
Probing the Informational Content of *Escherichia coli* σ^{70} Region 2.3 by Combinatorial Cassette Mutagenesis, **235**, 1489–1500.
Adaptation to Extreme Environments: Structure–Function Relationships in Emperor Penguin Haemoglobin, **237**, 615–621.
A Graphic Approach to Analyzing Codon Usage in 1562 *Escherichia coli* Protein Coding Sequences, **238**, 1–8.
Detecting Patterns in Protein Sequences, **239**, 698–712.

Amino acid side-chains
A Graph-theoretic Approach to the Identification of Three-dimensional Patterns of Amino Acid Side-chains in Protein Structures, **243**, 327–344.
Structural Features can be Unconserved in Proteins with Similar Folds. An Analysis of Side-chain to Side-chain Contacts Secondary Structure and Accessibility, **244**, 332–350.

Aminoacyl t-RNA synthetase
Conservation of a Transcription Antitermination Mechanism in Aminoacyl-tRNA Synthetase and Amino Acid Biosynthesis Genes in Gram-positive Bacteria, **235**, 798–804.

Aminoacylation
Escherichia coli Seryl-tRNA Synthetase Recognizes $tRNA^{Ser}$ by Its Characteristic Tertiary Structure, **236**, 738–748.

Aminoacyl-tRNA
see also t-RNA.
Cross-hypersensitivity Effects of Mutations in 23 S rRNA Yield Insight into Aminoacyl-tRNA Binding, **244**, 151 157.

Aminoacyl-tRNA synthetase
see also Specific aminoacyl-tRNA synthetases.
Conservation of a Transcription Antitermination Mechanism in Aminoacyl-tRNA Synthetase and Amino Acid Biosynthesis Genes in Gram-positive Bacteria, **235**, 798–804.
t-RNA Synthetase Connecting Anticodon Recognition with the Active Site of *Escherichia coli* Glutaminyl-tRNA Synthetase, **240**, 111–118.
Crystallization of Histidyl-tRNA Synthetase from *Escherichia coli*, **241**, 275–277.
In Vitro Selection of Small RNAs that Bind to *Escherichia coli* Phenylalanyl-tRNA Synthetase, **242**, 186–192.
An Alternative Splicing Modifies the C-Terminal End of Tryptophanyl-tRNA Synthetase in Murine Embryonic Stem Cells, **242**, 599–603.
Crystallization and Preliminary Diffraction Studies of *Escherichia coli* Lysyl-tRNA Synthetase, **243**, 123–125.

Amino/aromatic interactions
Amino/Aromatic Interactions in Proteins: Is the Evidence Stacked Against Hydrogen Bonding?, **239**, 315–331.

Aminoglycoside antibiotics
Selective Perturbation of G530 of 16 S rRNA by Translational Miscoding Agents and a Streptomycin-dependence Mutation in Protein S12, **235**, 156–172.

Aminopeptidase
Crystallization and Preliminary X-ray Analysis of PepC, a Thiol Aminopeptidase from *Lactococcus lactis* Homologous to Bleomycin Hydrolase, **237**, 160–162.
Crystallization and Preliminary X-ray Crystallographic Studies of Recombinant Human Leukotriene A_4 Hydrolase Complexed with Bestatin, **238**, 854–856.

Ammonium sulfate
Crystallization and Preliminary X-ray Diffraction Analysis of the ArsC Protein from the *Escherichia coli* Arsenical Resistance Plasmid, R773, **242**, 701–702.

Amoeboid cell motility
The Motile Major Sperm Protein (MSP) of *Ascaris suum* Forms Filaments Constructed from Two Helical Subfilaments, **243**, 60–71.

Amorphous calcium phosphate
A Unique Protonated Phosphate Group in Bone Mineral Not Present in Synthetic Calcium Phosphates. Identification by Phosphorous-31 Solid State NMR Spectroscopy, **244**, 423–435.

AMP
Crystallization and Preliminary Crystallographic Investigation of Electron-transfer Flavoprotein from the Bacterium *Methylophilus* W3A1, **240**, 265–266.

α-amylase
Refined Molecular Structure of Pig Pancreatic α-Amylase at 2·1 Å Resolution, **235**, 1560–1584.
Characterization, Crystallization and Preliminary X-ray Crystallographic Analysis of the Complex between Barley α-Amylase and the Bifunctional α-Amylase/Subtilisin Inhibitor from Barley Seeds, **236**, 368–371.

α-Amylase
Crystal and Molecular Structure of Barley α-Amylase, **239**, 104–121.

Amylase inhibitor
The Corn Inhibitor of Blood Coagulation Factor XIIa. Crystallization and Preliminary Crystallographic Analysis, **236**, 385–387.

α-amylase/subtilisin inhibitor
Characterization, Crystallization and Preliminary X-ray Crystallographic Analysis of the Complex between Barley α-Amylase and the Bifunctional α-Amylase/Subtilisin Inhibitor from Barley Seeds, **236**, 368–371.

Amyloid Aβ
Conformation and Fibrillogenesis of Alzheimer Aβ Peptides with Selected Substitution of Charged Residues, **244**, 64–73.

Amylolytic enzymes
Refined Crystal Structures of Glucoamylase from *Aspergillus awamori* var. *X100*, **238**, 575–591.

Anabaena
Heterocyst-forming Filamentous Cyanobacteria Encode Proteins that Resemble Eukaryotic RNA-binding Proteins of the RNP Family, **235**, 1162–1170.

Analysis of variance
Quantitative Analysis of Crystal Growth. Tryptophanyl-tRNA Synthetase Crystal Polymorphism and Its Relationship to Catalysis, **238**, 346–365.

Analytical ultracentrifugation
Solution Structure of an Isolated Antibody V_L Domain, **236**, 310–327.
Characterization of the Tryptophan Fluorescence and Hydrodynamic Properties of Rat DNA Polymerase β, **244**, 224–235.

***Androctonus australis* Hector**
Crystal Structure of Toxin II from the Scorpion *Androctonus australis* Hector Refined at 1·3 Å Resolution, **238**, 88–103.

Anesthetic binding site
The Specific Binding Site of the Volatile Anesthetic Diiodomethane to Purple Membrane by X-ray Diffraction, **238**, 297–301.

Angiotensinogen
X-ray Analysis at 2·0 Å Resolution of Mouse Submaxillary Renin Complexed with a Decapeptide Inhibitor CH-66, Based on the 4–16 Fragment of Rat Angiotensinogen, **236**, 342–360.

Anion-binding
Chloride Masks Effects of Opposing Positive Charges in Hb A and Hb Hinsdale (β139 Asn→Lys) that can Modulate Cooperativity as well as Oxygen Affinity, **239**, 561–568.
A Structural Analysis of Phosphate and Sulphate Binding Sites in Proteins. Estimation of Propensities for Binding and Conservation of Phosphate Binding Sites, **242**, 321–329.

Annexin
Formation of Two-dimensional Arrays of Annexin V on Phosphatidylserine-containing Liposomes, **236**, 199–208.
Structural and Electrophysiological Analysis of Annexin V Mutants. Mutagenesis of Human Annexin V, an *in Vitro* Voltage-gated Calcium Channel, Provides Information about the Structural Features of the Ion Pathway, the Voltage Sensor and the Ion Selectivity Filter, **237**, 479–499.
Three-dimensional Structure of Membrane-bound Annexin V. A Correlative Electron Microscopy-X-ray Crystallography Study, **238**, 199–213.

Anomalous scattering
Crystal Structure of Human Class mu Glutathione Transferase GSTM2-2. Effects of Lattice Packing on Conformational Heterogeneity, **238**, 815–832.

Antagonist
Domains of Interaction between Alpha Interferon and its Receptor Components, **243**, 245–257.

Antenna
Thermodynamics of Membrane Polypeptide Oligomerization in Light-harvesting Complexes and Associated Structural Changes, **238**, 445–454.

***Antennapedia* homeodomain**
Nuclear Magnetic Resonance Solution Structure of the *fushi tarazu* Homeodomain from *Drosophila* and Comparison with the *Antennapedia* Homeodomain, **238**, 333–345.

Antibiotics, *see* Aminoglycoside antibiotics; Peptide antibiotics

Antibody
Crystallization and Preliminary X-ray Analysis of the Monoclonal Anti-tumor Antibody BR96 and its Complex with the Le^y Determinant, **235**, 372–376.
The *de Novo* Design of an Antibody Combining Site Crystallographic Analysis of the V_L Domain Confirms the Structural Model, **238**, 226–244.
Crystallization and Preliminary X-ray Analysis of an Anti-Staphylococcal Nuclease–Staphylococcal Nuclease Complex and of a Second Anti-Staphylococcal Nuclease Antibody, **239**, 154–157.
Exploring the Mimicry of Polysaccharide Antigens by Anti-idiotypic Antibodies. The Crystallization, Molecular Replacement, and Refinement to 2·8 Å Resolution of an Idiotope–Anti-idiotope-Fab Complex and of the Unliganded-Anti-idiotope Fab, **241**, 691–705.
Preliminary Crystallographic Analysis of a Fab Specific for P-glycoprotein With and Without Bound Peptide, **241**, 736–738.
Crystallization and Preliminary X-ray Analysis of the Fab Fragment of a Human Monoclonal IgM Rheumatoid Factor (2A2), **242**, 706–708.
Site-Directed Mutagenesis and ^1H Nuclear Magnetic Resonance of an Anti-Dinitrophenyl Spin Label Antibody, **244**, 301–318.

Antibody binding
Investigation of Shape Variations in the Antibody Binding Site by Molecular Dynamics Computer Simulation, **236**, 1186–1195.

Antibody diversity
Structural Analysis of Antibody Specificity. Detailed Comparison of Five Fab′-Steroid Complexes, **241**, 663–690.

Antibody modelling
Comparison of Surface Accessible Residues in Human and Murine Immunoglobulin Fv Domains. Implication for Humanization of Murine Antibodies, **235**, 959–973.

Antibody specificity
Crystal Structure of a Peptide Complex of Anti-influenza Peptide Antibody Fab 26/9. Comparison of Two Different Antibodies Bound to the Same Peptide Antigen, **241**, 534–556.
Structural Analysis of Antibody Specificity. Detailed Comparison of Five Fab′-Steroid Complexes, **241**, 663–690.

Antibody structure
Catalytic Antibody Model and Mutagenesis Implicate Arginine in Transition-state Stabilization, **235**, 1098–1116.
Solution Structure of an Isolated Antibody V_L Domain, **236**, 310–327.

Antibody–antigen complexes
Local and Transmitted Conformational Changes on Complexation of an Anti-sweetener Fab, **236**, 247–274.
Crystallization and Preliminary X-ray Analysis of an Anti-Staphylococcal Nuclease–Staphylococcal Nuclease Complex and of a Second Anti-Staphylococcal Nuclease Antibody, **239**, 154–157.

ntibody-antigen complexes
Exploring the Mimicry of Polysaccharide Antigens by Anti-idiotypic Antibodies. The Crystallization, Molecular Replacement, and Refinement to 2·8 Å Resolution of an Idiotope–Anti-idiotope-Fab Complex and of the Unliganded-Anti-idiotope Fab, **241**, 691–705.

ntibody–antigen interactions
Catalytic Antibody Model and Mutagenesis Implicate Arginine in Transition-state Stabilization, **235**, 1098–1116.
Investigation of Shape Variations in the Antibody Binding Site by Molecular Dynamics Computer Simulation, **236**, 1186–1195.
Crystal Structure of a Peptide Complex of Anti-influenza Peptide Antibody Fab 26/9. Comparison of Two Different Antibodies Bound to the Same Peptide Antigen, **241**, 534–556.
Structural Analysis of Antibody Specificity. Detailed Comparison of Five Fab'-Steroid Complexes, **241**, 663–690.

Anticancer
Preliminary Crystallographic Analysis of a Fab Specific for P-glycoprotein With and Without Bound Peptide, **241**, 736–738.

Anticodon nuclease
The *Escherichia coli prr* Region Encodes a Functional Type IC DNA Restriction System Closely Integrated with an Anticodon Nuclease Gene, **237**, 266–274.

Anti-digoxin antibody
Solution Structure of an Isolated Antibody V_L Domain, **236**, 310–327.

Antifreeze proteins
Single Crystals of a Type III Antifreeze Polypeptide from Ocean Pout, **237**, 351–352.

Antigen binding
The *de Novo* Design of an Antibody Combining Site. Crystallographic Analysis of the V_L Domain Confirms the Structural Model, **238**, 226–244.

Antigen–antibody complexes
Three-dimensional Structures of the Free and the Antigen-complexed Fab from Monoclonal Anti-lysozyme Antibody D44.1, **243**, 767–781.

Antigen–antibody interaction
Solvent Rearrangement in an Antigen–Antibody Interface Introduced by Site-directed Mutagenesis of the Antibody Combining Site, **238**, 496–500.

Antiparallel collagen fibrils
Native Collagen Fibrils From Echinoderms are Molecularly Bipolar, **235**, 73–79.
Vertebrate (Chick) Collagen Fibrils Formed *in Vivo* Can Exhibit a Reversal in Molecular Polarity, **235**, 80–83.

Anti-RNA antibody
Preparation, Characterization and Crystallization of an Antibody Fab Fragment that Recognizes RNA. Crystal Structures of Native Fab and Three Fab-mononucleotide Complexes, **243**, 283–297.

Anti-sweetener Fab
Local and Transmitted Conformational Changes on Complexation of an Anti-sweetener Fab, **236**, 247–274.

Antitermination
Suppression of Yeast RNA Polymerase III Mutations by the *URP2* Gene Encoding a Protein Homologous to the Mammalian Ribosomal Protein S20, **240**, 1–7.

Antitumor protein
A New Crystal Form of Abrin-a from the Seeds of *Abrus precatorius*, **235**, 1152–1153.
Crystallization and Preliminary X-ray Analysis of GAP 31. A Protein Which Inhibits the Life Cycle of HIV-1, **240**, 92–94.

Antiviral/anti-tumor agent
Crystallization and Preliminary X-ray Analysis of GAP 31. A Protein Which Inhibits the Life Cycle of HIV-1, **240**, 92–94.

Apolipoprotein C-I
Crystallization and Preliminary X-ray Analysis of Human Plasma Apolipoprotein C-I, **236**, 382–384.

Apolipoprotein S100
Crystallization and Preliminary X-ray Analysis of apo-S100β and S100β with Ca^{2+}, **236**, 953–957.

Apomyoglobin
Thermodynamic Puzzle of Apomyoglobin Unfolding, **235**, 1318–1325.
Molecular Mechanisms of Acid Denaturation. The Role of Histidine Residues in the Partial Unfolding of Apomyoglobin, **237**, 588–601.
Unfolding Pathway of Apomyoglobin. Simultaneous Characterization of Acidic Conformational States by Frequency Domain Fluorometry, **241**, 103–109.
Helicity, Circular Dichroism and Molecular Dynamics of Proteins, **243**, 173–178.

AppppA
Crystallization and Preliminary Diffraction Studies of *Escherichia coli* Lysyl-tRNA Synthetase, **243**, 123–125.

Arabidopsis thaliana
Interstitial Telomeric Repeats within the *Arabidopsis thaliana* Genome, **239**, 163–169.
A Myosin from a Higher Plant has Structural Similarities to Class V Myosins, **239**, 591–597.

AraC family
Reaching Out. Locating and Lengthening the Interdomain Linker in AraC Protein, **242**, 330–338.
DNA-Dependent Renaturation of an Insoluble DNA Binding Protein. Identification of the RhaS Binding Site at *rhaBAD*, **243**, 821–829.

Arc repressor
Nuclear Magnetic Resonance Solution Structure of the Arc Repressor Using Relaxation Matrix Calculations, **236**, 328–341.
Arc Repressor will not Denature Under Pressure in the Absence of Water, **240**, 184–187.

Archaea
Identification of a *grpE* Heat-shock Gene Homolog in the Archaeon *Methanosarcina mazei*, **240**, 95–101.
Structural Characteristics of the Stable RNA Introns of Archaeal Hyperthermophiles and their Splicing Junctions, **243**, 846–855.
Structure and Transcription of the L11-L1-L10-L12 Ribosomal Protein Gene Operon from the Extreme Thermophilic Archaeon *Sulfolobus acidocaldarius*, **244**, 242–249.

ARF
Crystallization and Preliminary X-ray Diffraction Studies on ADP-ribosylation Factor 1, **244**, 651–653.

Arginine kinase
Evolution of Phosphagen Kinase. Primary Structure of Glycocyamine Kinase and Arginine Kinase from Invertebrates, **237**, 353–357.

Arginine repressor
Explanation for Different Types of Regulation of Arginine Biosynthesis in *Escherichia coli* B and *Escherichia coli* K12 Caused by a Difference Between Their Arginine Repressors, **235**, 221–230.

Argininosuccinic acid lyase
Expression, Purification, Crystallization and Preliminary X-ray Analysis of Human Argininosuccinic Acid Lyase, **239**, 336–338.
Crystallization and Preliminary X-ray Analysis of a Mutant Duck δ II Crystallin, **243**, 944–946.

Aromatic residues
Transmembrane Aromatic Amino Acid Distribution in P-glycoprotein. A Functional Role in Broad Substrate Specificity, **235**, 554–564.

Arrinoid protein
Crystallization and Preliminary X-ray Diffraction Studies of a Corrinoid Protein from *Sporomusa ovata*, **236**, 388–389.

ArsC
Crystallization and Preliminary X-ray Diffraction Analysis of the ArsC Protein from the *Escherichia coli* Arsenical Resistance Plasmid, R773, **242**, 701–702.

Arsenical resistance
Crystallization and Preliminary X-ray Diffraction Analysis of the ArsC Protein from the *Escherichia coli* Arsenical Resistance Plasmid, R773, **242**, 701–702.

Arthromyces ramosus
Crystal Structure of the Fungal Peroxidase from *Arthromyces ramosus* at 1·9 Å Resolution. Structural Comparisons with the Lignin and Cytochrome *c* Peroxidases, **235**, 331–344.

Arylphorin
Analysis of Mosquito Vitellogenin cDNA. Similarity with Vertebrate Phosvitins and Arthropod Serum Proteins, **237**, 641–647.

Ascaris suum
The Motile Major Sperm Protein (MSP) of *Ascaris suum* Forms Filaments Constructed from Two Helical Subfilaments, **243**, 60–71.

Aspartate
Conformational Analysis of Carboxylate and Carboxamide Side-chains Bound to Cations, **239**, 306–314.

Aspartate aminotransferase
Crystalline Mitochondrial Aspartate Aminotransferase Exists in Only Two Conformations, **236**, 963–968.
Crystal Structures of *Escherichia coli* Aspartate Aminotransferase in Two Conformations. Comparison of an Unliganded Open and Two Liganded Closed Forms, **239**, 285–305.

Aspartate transcarbamylase
The Activation of *Escherichia coli* Aspartate Transcarbamylase by ATP. Specific Involvement of Helix H2′ at the Hydrophobic Interface Between the Two Domains of the Regulatory Chains, **242**, 139–149.
Revision in Sequence of CAD Aspartate Transcarbamylase Domain of *Drosophila*, **243**, 364–366.

Aspartyl-adenylate
Synthesis and Recognition of Aspartyl-adenylate by *Thermus thermophilus* Aspartyl-tRNA Synthetase, **244**, 158–167.

Assembly
see also Protein assembly.
Mutational Analysis of the C-Terminal Region of *Saccharomyces cerevisiae* Ribosomal Protein L25 *in Vitro* and *in Vivo* Demonstrates the Presence of Two Distinct Functional Elements, **240**, 243–255.
ATP Synthase from Bovine Heart Mitochondria. *In Vitro* Assembly of a Stalk Complex in the Presence of F_1-ATPase and in its Absence, **242**, 408–421.

Assignment
Protein Three-dimensional Structure Determination and Sequence-specific Assignment of ^{13}C and ^{15}N-separated NOE Data. A Novel Real-space *ab initio* Approach, **243**, 696–718.

Astacin
Refined 2·0 Å X-ray Crystal Structure of the Snake Venom Zinc-endopeptidase Adamalysin II. Primary and Tertiary Structure Determination, Refinement, Molecular Structure and Comparison with Astacin, Collagenase and Thermolysin, **239**, 513–544.

Atlantic salmon
Tc1 Transposon-like Sequences are Widely Distributed in Salmonids, **241**, 26–34.

Atomic force microscopy
Polyhedral Assembly of a Membrane Protein in its Three-dimensional Crystal, **236**, 990–994.

ATP binding site
Functional Characterization of Residues in the P-loop Motif of the RecA Protein ATP Binding Site, **237**, 20–34.

ATP hydrolysis
Resolution of the Three-stranded Recombination Intermediate Made by RecA Protein. An Essential Role of ATP Hydrolysis, **238**, 540–554.
Isolation and Characterization of an *Escherichia coli* DnaK Mutant with Impaired ATPase Activity, **242**, 364–377.

ATP synthase
ATP Synthase from Bovine Heart Mitochondria. *In Vitro* Assembly of a Stalk Complex in the Presence of F_1-ATPase and in its Absence, **242**, 408–421.

ATPase
SAV, an Archaebacterial Gene with Extensive Homology to a Family of Highly Conserved Eukaryotic ATPases, **235**, 396–401.
Expression of Mitochondrial Genes in the Germinating Conidia of *Neurospora crassa*, **235**, 881–897.
Kinetic Theory of ATP-driven Translocases on One-dimensional Polymer Lattices, **235**, 1436–1446.
Kinetic Parameters of the Translocation of Bacteriophage T4 Gene 41 Protein Helicase on Single-stranded DNA, **235**, 1447–1458.
A Charge Change in an Evolutionarily-conserved Region of the Myosin Globular Head Prevents Myosin and Thick Filament Accumulation in *Drosophila*, **236**, 697–702.
Genes Encoding Actin-related Proteins of *Drosophila melanogaster*, **241**, 498–503.
Isolation and Characterization of an *Escherichia coli* DnaK Mutant with Impaired ATPase Activity, **242**, 364–377.

F_1-ATPase
ATP Synthase from Bovine Heart Mitochondria. *In Vitro* Assembly of a Stalk Complex in the Presence of F_1-ATPase and in its Absence, **242**, 408–421.
Crystallization of Mutant β Subunit of F_1-ATPase from Thermophilic *Bacillus* PS3, **242**, 709–711.

A-tract
Requirement for an A-tract Structure at the Binding Site of Phage ϕ29 Transcriptional Activator, **237**, 175–181.
The Crystal Structure of C-C-A-T-T-A-A-T-G-G. Implications for Bending of *B*-DNA at T-A Steps, **239**, 79–96.
Context-dependent Effects of Upstream A-Tracts. Stimulation or Inhibition of *Escherichia coli* Promoter Function, **239**, 466–475.
Sequence Elements Responsible for DNA Curvature, **244**, 135–143.

Attenuation
Human Immunodeficiency Virus Type 1 Tat Directs Transcription Through Attenuation Sites within the Mouse *c*-myc Gene, **243**, 568–573.

Auto-inhibition
Crystallization and Preliminary X-ray Analysis of the Auto-inhibited Twitchin Kinase, **236**, 1259–1261.

Automatic docking
Ligand Docking to Proteins With Discrete Side-chain Flexibility, **235**, 345–356.
Rational Automatic Search Method for Stable Docking Models of Protein and Ligand, **243**, 310–326.

Automatic recognition
Automatic Identification of Group I Intron Cores in Genomic DNA Sequences, **235**, 1206–1217.

Autoregulation
Explanation for Different Types of Regulation of Arginine Biosynthesis in *Escherichia coli* B and *Escherichia coli* K12 Caused by a Difference Between Their Arginine Repressors, **235**, 221–230.
Partitioning of Plasmid R1. The *parA* Operon is Autoregulated by ParR and Its Transcription is Highly Stimulated by a Downstream Activating Element, **236**, 1299–1309.

Averaged images
PA28 Activator Protein Forms Regulatory Caps on Proteasome Stacked Rings, **236**, 7–15.

vidin
Crystal Structure of Apo-avidin from Hen Egg-white, **235**, 42–46.
Biotin and Biotin Analogues Specifically Modify the Fluorescence Decay of Avidin, **242**, 559–565.

Azacytosine
Ligand-induced Conformational States of the Cytosine-specific DNA methyltransferase M.*Hga*I-2, **235**, 545–553.

zide
Crystallographic Study of Azide-inhibited Bovine Cu,Zn Superoxide Dismutase, **240**, 179–183.

zotobacter chroococcum
Sequences, Organization and Analysis of the *hupZM-NOQRTV* Genes from the *Azotobacter chroococcum* Hydrogenase Gene Cluster, **243**, 549–557.

zotobacter vinelandii
The *hypE* Gene Completes the Gene Cluster for H_2-oxidation in *Azotobacter vinelandii*, **236**, 390–396.
Diffraction Quality Crystals of Protein X from *Azotobacter vinelandii*, **241**, 620–621.

B-and *A*-DNA
A Single 2′-Hydroxyl Group Converts *B*-DNA to *A*-DNA. Crystal Structure of the DNA-RNA Chimeric Decamer Duplex d(CCGGC)r(G)d(CCGG) with a Novel Intermolecular G·C Base-paired Quadruplet, **236**, 275–285.

α/β-barrel
Refined Molecular Structure of Pig Pancreatic α-Amylase at 2·1 Å Resolution, **235**, 1560–1584.

β-sheet structure
Principles Determining the Structure of β-Sheet Barrels in Proteins. I. A Theoretical Analysis, **236**, 1369–1381.
Principles Determining the Structure of β-Sheet Barrels in Proteins. II The Observed Structures, **236**, 1382–1400.

β-turns
Analysis of Two-residue Turns in Proteins, **238**, 733–747.

Bacillus circulans
Nucleotide Sequence and X-ray Structure of Cyclodextrin Glycosyltransferase from *Bacillus circulans* Strain 251 in a Maltose-dependent Crystal Form, **236**, 590–600.

Bacillus polymyxa
Crystallization and Preliminary X-ray Diffraction Analysis of a Type I β-glucosidase Encoded by the *bglA* Gene of *Bacillus polymyxa*, **240**, 267–270.

Bacillus sphaericus
Crystallization and Preliminary Crystallographic Analysis of Sfericase. A *Bacillus sphaericus* Calcium-Dependent Serine Proteinase, **235**, 760–762.
Crystallization and Quaternary Structure Analysis of the NAD^+-dependent Leucine Dehydrogenase from *Bacillus sphaericus*, **236**, 663–665.

Bacillus stearothermophilus
Allosteric Activation in *Bacillus stearothermophilus* Lactate Dehydrogenase Investigated by an X-ray Crystallographic Analysis of a Mutant Designed to Prevent Tetramerization of the Enzyme, **238**, 615–625.

Bacillus subtilis
The *Bacillus subtilis spoVD* Gene Encodes a Mother-cell-specific Penicillin-binding Protein Required for Spore Morphogenesis, **235**, 209–220.
Analysis of *Cis* and *Trans* Acting Elements Required for the Initiation of DNA Replication in the *Bacillus subtilis* Bacteriophage SPP1, **236**, 1324–1340.
Crystallization and Preliminary X-ray Analysis of a Lipase from *Bacillus subtilis*, **238**, 857–859.
The δ Subunit of *Bacillus subtilis* RNA Polymerase. An Allosteric Effector of the Initiation and Core-recycling Phases of Transcription, **239**, 1–14.
The Minimal Sequence Needed to Define a Functional DNA Terminator in *Bacillus subtilis*, **241**, 335–340.
Transcription of the *xyl* Operon is Controlled in *Bacillus subtilis* by Tandem Overlapping Operators Spaced by Four Base-pairs, **243**, 413–424.
Sporulation Regulatory Protein SpoIIID from *Bacillus subtilis* Activates and Represses Transcription by Both Mother-cell-specific Forms of RNA Polymerase, **243**, 425–436.

***Bacillus thuringiensis* toxin**
Crystallization and Preliminary X-ray Diffraction Studies of the Lepidopteran-specific Insecticidal Crystal Protein CrylA(a), **243**, 530–532.

Backbone dynamics
Backbone Dynamics of a Highly Disordered 131 Residue Fragment of Staphylococcal Nuclease, **242**, 527–546.

Bacteria
A Mutant Hook-associated Protein (HAP3) Facilitates Torsionally Induced Transformations of the Flagellar Filament of *Escherichia coli*, **238**, 173–186.
On the Identification of Group II Introns in Nucleotide Sequence Data, **242**, 389–396.

Bacterial bioluminescence
Crystallization and Preliminary Crystallographic Analysis of NADPH : FMN Oxidoreductase from *Vibrio harveyi*, **241**, 283–287.

Bacterial conjugation
Genetic Organization of the Conjugal DNA Processing Region of the IncW Plasmid R388, **235**, 448–464.
Complete Nucleotide Sequence of Birmingham IncPα Plasmids. Compilation and Comparative Analysis, **239**, 623–663.

Bacterial corrinoids
Crystallization and Preliminary X-ray Diffraction Studies of a Corrinoid Protein from *Sporomusa ovata*, **236**, 388–389.

Bacterial toxin
The *parDE* Operon of the Broad-host-range Plasmid RK2 Specifies Growth Inhibition Associated with Plasmid Loss, **237**, 35–51.

Bacteriochlorophyll biosynthesis genes
Directed Mutational Analysis of Bacteriochlorophyll *a* Biosynthesis in *Rhodobacter capsulatus*, **237**, 622–640.

Bacteriophage
see also Filamented bacteriophage.
Mapping the Functional Domains of Bacteriophage Lambda Integrase Protein, **235**, 908–925.
Analysis of the Single-stranded DNA Bacteriophage φX174, Refined at a Resolution of 3·0 Å, **237**, 517–543.
Alterations of Receptor Specificities of Coliphages of the T2 Family, **240**, 105–110.
Analysis of Electron Microscope Images and Electron Diffraction Patterns of Thin Crystals of Ø29 Connectors in Ice, **240**, 281–287.
Determinants of Receptor Specificity of Coliphages of the T4 Family. A Chaperone Alters the Host Range, **241**, 524–533.
The Characterization of p53 Binding Phage Isolated from Phage Peptide Display Libraries, **243**, 639–652.

Bacteriophage display
Selection of β-Lactamase on Filamentous Bacteriophage by Catalytic Activity, **237**, 415–422.
Structure of a Foreign Peptide Displayed on the Surface of Bacteriophage M13, **241**, 208–213.
Selection of Phage-displayed Antibodies Specific for a Cytoskeletal Antigen by Competitive Elution with a Monoclonal Antibody, **244**, 353–360.

Bacteriophage display mutagenesis
The Crystal Structure of Affinity-matured Human Growth Hormone at 2 Å Resolution, **236**, 286–299.

Bacteriophage f1
In Vivo Characterization of Mutants of the Bacteriophage f1 Gene V Protein Isolated by Saturation Mutagenesis, **236**, 556–571.

Bacteriophage fr
Crystal Structure of Bacteriophage fr Capsids at 3·5 Å Resolution, **244**, 279–290.

Bacteriophage lambda
Bacteriophage Lambda N-Dependent Transcription Antitermination. Competition for an RNA Site May Regulate Antitermination, **236**, 217–228.
Direct and Indirect Effects of Mutations in λ P_{RM} on Open Complex Formation at the Divergent P_R Promoter, **240**, 119–126.

Bacteriophage lambda *cI* repressor
Lambda *cI* Repressor Mutants Altered in Transcriptional Activation, **242**, 23–36.

Bacteriophage M13
In Vitro Characterization of Mutants of the Bacteriophage f1 Gene V Protein Isolated by Saturation Mutagenesis, **236**, 556–571.
Structure of a Foreign Peptide Displayed on the Surface of Bacteriophage M13, **241**, 208–213.

Bacteriophage MS2
Crystal Structure of Bacteriophage fr Capsids at 3·5 Å Resolution, **244**, 279–290.

Bacteriophage Mu
DNA-Protein Cooperativity in the Assembly and Stabilization of Mu Strand Transfer Complex. Relevance of DNA Phasing and *att* Site Cleavage, **238**, 514–527.
Processive Recombination by Wild-type Gin and an Enhancer-independent Mutant. Insight into the Mechanisms of Recombination Selectivity and Strand Exchange, **243**, 437–457.

Bacteriophage λ
DNA Conformational Changes Associated with the Cooperative Binding of cI-repressor of Bacteriophage λ to O_R, **244**, 494–510.

Bacteriophage P1
Purification and DNA-Binding Activity of the PacA Subunit of the Bacteriophage P1 Pacase Enzyme, **243**, 258–267.
Faithful Cleavage of the P1 Packaging Site (*pac*) Requires Two Phage Proteins, PacA and PacB, and Two *Escherichia coli* Proteins, IHF and HU, **243**, 268–282.

Bacteriophage p53
The Characterization of p53 Binding Phage Isolated from Phage Peptide Display Libraries, **243**, 639–652.

Bacteriophage peptide library
A Monoclonal Antibody Epitope on Keratin 8 Identified Using a Phage Peptide Library, **235**, 61–67.

Bacteriophage Qβ
Identification of Recognition Elements on Bacteriophage Qβ Minus Strand RNA that are Essential for Template Activity with Qβ Replicase, **243**, 811–815.

Bacteriophage repressor
Cooperative DNA-Protein Interactions. Effects of Changing the Spacing Between Adjacent Binding Sites, **235**, 532–544.

Bacteriophage RNA polymerase
Characterization of Two Types of Termination Signal for Bacteriophage T7 RNA Polymerase, **238**, 145–158.

Bacteriophage S13 DNA
Unusual Kinetics of Uracil Formation in Single and Double-stranded DNA by Deamination of Cytosine in Cyclobutane Pyrimidine Dimers, **235**, 807–812.

Bacteriophage SP01
Interrelations of Secondary Structure Stability and DNA-binding Affinity in the Bacteriophage SP01-encoded Type II DNA-binding Protein TF1, **236**, 139–150.

Bacteriophage SPP1
Analysis of *Cis* and *Trans* Acting Elements Required for the Initiation of DN. Replication in the *Bacillus subtilis* Bacteriophage SPP1, **236**, 1324–1340.

Bacteriophage T2
Alterations of Receptor Specificities of Coliphages of the T2 Family, **240**, 105–110.

Bacteriophage T3
Analysis of Functional Domains of the Packaging Proteins of Bacteriophage T3 by Site-directed Mutagenesis, **235**, 248–259.

Bacteriophage T4
Determination of α-Helix Propensity within the Context of a Folded Protein. Sites 44 and 131 in Bacteriophage T4 lysozyme, **235**, 600–624.
Kinetic Parameters of the Translocation of Bacteriophage T4 Gene 41 Protein Helicase on Single-stranded DNA, **235**, 1447–1458.
Determinants of Receptor Specificity of Coliphages of the T4 Family. A Chaperone Alters the Host Range, **241**, 524–533.
Fibritin Encoded by Bacteriophage T4 Gene wac has a Parallel Triple-stranded α-Helical Coiled-coil Structure, **242**, 470–486.

Bacteriophage T7
Escherichia coli Seryl-tRNA Synthetase Recognizes $tRNA^{Ser}$ by Its Characteristic Tertiary Structure, **236**, 738–748.
Bacteriophage T7 RNA Polymerase and Its Active-site Mutants. Kinetic, Spectroscopic and Calorimetric Characterization, **237**, 5–19.

Bacteriophage φ29
Requirement for an A-tract Structure at the Binding Site of Phage φ29 Transcriptional Activator, **237**, 175–181.
Complex Formation between Phage φ29 Single-stranded DNA Binding Protein and DNA, **239**, 213–226.

Bacteriophage φX174
Analysis of the Single-stranded DNA Bacteriophage φX174, Refined at a Resolution of 3·0 Å, **237**, 517–543.

Bacteriophage φX174 structure
Calcium Ion-induced Structural Changes in Bacteriophage φX174, **244**, 291–300.

Bacteriophage-antibodies
In Vitro Assembly of Repertoires of Antibody Chains on the Surface of Phage by Renaturation, **239**, 68–78.

Bacteriophage-enzyme
Selection of β-Lactamase on Filamentous Bacteriophage by Catalytic Activity, **237**, 415–422.

Bacteriorhodopsin
Polyhedral Assembly of a Membrane Protein in its Three-dimensional Crystal, **236**, 990–994.
Rotational Orientation of Transmembrane α-helices in Bacteriorhodopsin. A Neutron Diffraction Study, **236**, 1093–1104.
Prediction of the Positioning of the Seven Transmembrane α-helices of Bacteriorhodopsin. A Molecular Simulation Study, **236**, 1105–1122.
The Proton Transfers in the Cytoplasmic Domain of Bacteriorhodopsin are Facilitated by a Cluster of Interacting Residues, **239**, 401–414.
Energy Coupling in an Ion Pump. The Reprotonation Switch of Bacteriorhodopsin, **243**, 621–638.

Bacteriphage fr
Crystal Structure of Bacteriophage fr Capsids at 3·5 Å Resolution, **244**, 279–290.

Baculovirus
Crystallization and Initial X-ray Crystallographic Characterization of Recombinant Bovine Inositol Polyphosphate 1-Phosphatase Produced in *Spodoptera frugiperda* Cells, **236**, 584–589.

Baculovirus expression
Expression and Crystallization of a Soluble Form of *Drosophila* Fasciclin III, **241**, 483–487.
Crystallization and X-ray Crystallographic Analysis of Recombinant Chicken Poly (ADP-ribose) Polymerase Catalytic Domain Produced in Sf9 Insect Cells, **244**, 114–116.

***Bam*HI**
Crystallization and Preliminary X-ray Analysis of Restriction Endonuclease *Bam*HI–DNA Complex, **239**, 430–432.

Barley α-amylase
Characterization, Crystallization and Preliminary X-ray Crystallographic Analysis of the Complex between Barley α-Amylase and the Bifunctional α-Amylase/Subtilisin Inhibitor from Barley Seeds, **236**, 368–371.
Crystal and Molecular Structure of Barley α-Amylase, **239**, 104–121.

Barrel distortions
Principles Determining the Structure of β-Sheet Barrels in Proteins. II The Observed Structures, **236**, 1382–1400.

Barstar
Crystallization and Molecular Packing Analysis of Barstar Crystals, **243**, 533–536.

Base frequency
A Graphic Approach to Analyzing Codon Usage in 1562 *Escherichia coli* Protein Coding Sequences, **238**, 1–8.

Base sequence
Production of UV-induced Frameshift Mutations *in Vitro* by DNA Polymerases Deficient in 3′→5′ Exonuclease Activity, **240**, 226–242.

Basement membranes
Changes in Calcium and Collagen IV Binding Caused by Mutations in the EF Hand and Other Domains of Extracellular Matrix Protein BM40 (SPARC, Osteonectin), **238**, 563–574.

Base-pair geometry
The Effect of Mathematics and Coordinate System on Comparability and "Dependencies" of Nucleic Acid Structure Parameters, **237**, 98–124.

Base-triple
In Vitro Genetic Analysis of the Hinge Region Between Helical Elements P5-P4-P6 and P7-P3-P8 in the *sunY* Group I Self-splicing Intron, **235**, 140–155.

Bead model simulations
The Structure of the RNA Polymerase-Promoter Complex. DNA-bending-angle by Quantitative Electrooptics, **236**, 1–6.

Bending, *see* DNA bending

Bestatin
Crystallization and Preliminary X-ray Crystallographic Studies of Recombinant Human Leukotriene A_4 Hydrolase Complexed with Bestatin, **238**, 854–856.

Beta roll
Crystal Structure of the 50 kDa Metallo Protease from *Serratia marcescens*, **242**, 244–251.

Beta-barrel
Alignment of Beta-barrels in $(\beta/\alpha)_8$ Proteins using Hydrogen-bonding Pattern, **244**, 168–182.

Beta-helix proteins
Filamentous Hemagglutinin of *Bordetella pertussis*. A Bacterial Adhesin Formed as a 50-nm Monomeric Rigid Rod Based on a 19-residue Repeat Motif Rich in Beta Strands and Turns, **241**, 110–124.

BIAcore™
Thermodynamic Partitioning Model for Hydrophobic Binding of Polypeptides by GroEL. I. GroEL Recognizes the Signal Sequences of β-lactamase Precursor, **242**, 150–164.

Bicarbonate
Enzyme–Substrate Interactions. Structure of Human Carbonic Anhydrase I Complexed with Bicarbonate, **241**, 226–232.

Bifidobacterium longum
A Regular 1 : 1 Complex of Two Allosteric States in the Single Crystal of L-Lactate Dehydrogenase from *Bifidobacterium longum*, **236**, 958–959.

Binding
Structures of Three Human β Alcohol Dehydrogenase Variants. Correlations with their Functional Differences, **239**, 415–429.

Binding affinity prediction
Combined Conformational Search and Finite-Difference Poisson–Boltzmann Approach for Flexible Docking. Application to an Operator Mutation in the λ Repressor-Operator Complex, **238**, 455–465.

Binding energy
Salt Effects on Ligand–DNA Binding. Minor Groove Binding Antibiotics, **238**, 245–263.
Salt Effects on Protein–DNA Interactions. The λcI Repressor and *Eco*RI Endonuclease, **238**, 264–280.

Binding specificity
Combined Conformational Search and Finite-Difference Poisson–Boltzmann Approach for Flexible Docking. Application to an Operator Mutation in the λ Repressor-Operator Complex, **238**, 455–465.

Bioenergetics
Electron Microscopy of Cytochrome *c* Oxidase Crystals. Monomer–Dimer Relationship and Cytochrome *c* Binding Site, **237**, 275–297.

Bioluminescence *see* Bacterial bioluminescence

Biotin
Crystal Structure of Apo-avidin from Hen Egg-white, **235**, 42–46.
Enrichment of Human DNAs that Flank Poly(dA)·poly(dT) Tracts by Triplex DNA Formation, **237**, 193–200.
Biotin and Biotin Analogues Specifically Modify the Fluorescence Decay of Avidin, **242**, 559–565.

Biotin carboxylase
Preliminary X-ray Crystallographic Analysis of Biotin Carboxylase Isolated from *Escherichia coli*, **235**, 367–369.

BiP
Different Peptide Binding Specificities of hsp70 Family Members, **241**, 133–135.

Fructose-2,6-bisphosphate
Preliminary X-ray Analysis of a Truncated Form of Recombinant Fructose-2,6-bisphosphatase, **235**, 1147–1151.

Bisulphite modification
Perpetuation of Cytosine Methylation in *Ascobolus immersus* Implies a Novel Type of Maintenance Methylase, **240**, 42–51.

Black beetle virus
The Refined Three-Dimensional Structure of an Insect Virus at 2·8 Å Resolution, **235**, 565–586.

Bladder carcinoma cells
Selection of Phage-displayed Antibodies Specific for a Cytoskeletal Antigen by Competitive Elution with a Monoclonal Antibody, **244**, 353–360.

Bleomycin
Single Base-Pair Deletions Induced by Bleomycin at Potential Double-strand Cleavage Sites in the *aprt* Gene of Stationary Phase Chinese Hamster Ovary D422 Cells, **243**, 216–226.

Bleomycin hydrolase
Crystallization and Preliminary X-ray Analysis of PepC, a Thiol Aminopeptidase from *Lactococcus lactis* Homologous to Bleomycin Hydrolase, **237**, 160–162.

Blood substitute
Structure Determination of Aquomet Porcine Hemoglobin at 2·8 Å Resolution, **244**, 541–553.

Blue copper protein
Crystal Structure Analysis and Refinement at 2·15 Å Resolution of Amicyanin, a Type I Blue Copper Protein, from *Thiobacillus versutus*, **236**, 1196–1211.
Solution Structure of the Type 1 Blue Copper Protein Amicyanin from *Thiobacillus versutus*, **240**, 358–371.
Nuclear Magnetic Resonance ^{15}N and ^{1}H Resonance Assignments and Global Fold of Rusticyanin. Insights into the Ligation and Acid Stability of the Blue Copper Site, **244**, 370–384.

BmCF1
BmCF1, a *Bombyx mori* RXR-type Receptor Related to the *Drosophila ultraspiracle*, **238**, 479–486.

Bombyx
BmCF1, a *Bombyx mori* RXR-type Receptor Related to the *Drosophila ultraspiracle*, **238**, 479–486.

Bone morphogenetic protein
Crystallization and Preliminary Crystallographic Data of Recombinant Human Osteogenic Protein-1 (hOP-1), **244**, 657–658.

Bordetella pertussis
Crystallographic Characterization of Pertactin, a Membrane-associated Protein from *Bordetella pertussis*, **235**, 772–773.
Filamentous Hemagglutinin of *Bordetella pertussis*. A Bacterial Adhesin Formed as a 50-nm Monomeric Rigid Rod Based on a 19-residue Repeat Motif Rich in Beta Strands and Turns, **241**, 110–124.
The Modular Architecture of Bacterial Response Regulators. Insights into the Activation Mechanism of the BvgA Transactivator of *Bordetella pertussis*, **241**, 363–377.

Bovine pancreatic trypsin inhibitor (BPTI)
^{1}H NMR Analysis of the Partly-folded Non-native Two-disulphide Intermediates (30-51,5-14) and (30-51,5-38) in the Folding Pathway of Bovine Pancreatic Trypsin Inhibitor, **235**, 1044–1061.
Formation of a Hydrophobic Cluster in Denatured Bovine Pancreatic Trypsin Inhibitor, **236**, 412–420.
Translational and Rotational Diffusion of Proteins, **236**, 629–636.
Simultaneous Refinement of the Structure of BPTI Against NMR Data Measured in Solution and X-ray Diffraction Data Measured in Single Crystals, **241**, 588–599.

Bowman-Birk
Crystallization and Preliminary X-ray Diffraction Studies on a Trypsin/Chymotripsin Double-headed Inhibitor from Horse Gram, **235**, 364–366.

BPV-1
Segregation Properties of Bovine Papillomaviral Plasmid DNA, **236**, 480–490.

Branch migration
Hexameric Rings of *Escherichia coli* RuvB Protein: Cooperative Assembly, Processivity and ATPase Activity, **243**, 208–215.

Branched DNA
see also DNA catenanes.
Symmetric Holliday Junction Crossover Isomers, **238**, 658–668.

Branched nucleic acids
Conformation of the Central, Three-helix Junction of the 5 S Ribosomal RNA of *Sulfolobus acidocaldarius*, **241**, 415–430.

Brevibacterium fuscum
Preliminary Crystallographic Study of Protocatechuate 3,4-Dioxygenase from *Brevibacterium fuscum*, **236**, 374–376.

Broad host range plasmid
Host-inhibitory Functions Encoded by Promiscuous Plasmids. Transient Arrest of *Escherichia coli* Segregants that Fail to Inherit Plasmid RK2, **237**, 52–64.

Brome mosaic virus (BMV)
Solution Structure of the 3′-End of Brome Mosaic Virus Genomic RNAs. Conformational Mimicry with Canonical tRNAs, **235**, 508–531.

Brushite
A Unique Protonated Phosphate Group in Bone Mineral Not Present in Synthetic Calcium Phosphates. Identification by Phosphorous-31 Solid State NMR Spectroscopy, **244**, 423–435.

Bulge
In Vitro Genetic Analysis of the Hinge Region Between Helical Elements P5-P4-P6 and P7-P3-P8 in the *sunY* Group I Self-splicing Intron, **235**, 140–155.

Bundles
The Motile Major Sperm Protein (MSP) of *Ascaris suum* Forms Filaments Constructed from Two Helical Subfilaments, **243**, 60–71.

Buried water
Cavity Mutants of Savinase™. Crystal Structures and Differential Scanning Calorimetry Experiments Give Hints of the Function of the Buried Water Molecules in Subtilisins, **242**, 193–202.

Butyrylcholinesterase
Pressure and Propylene Carbonate Denaturation of Native and "Aged" Phosphorylated Cholinesterase, **238**, 466–478.

BvgA
The Modular Architecture of Bacterial Response Regulators. Insights into the Activation Mechanism of the BvgA Transactivator of *Bordetella pertussis*, **241**, 363–377.

***B*/*Z* junction**
Recombination-like Structure of d(CCGCGG), **243**, 484–493.

***B*–*Z* transition**
Structural Specificity of Peptides in *Z*-DNA Formation and Energetics of the Peptide-induced *B*–*Z* Transition of Poly(dG-m^{5}dC), **236**, 610–617.

C_3HC_4
Structure of the C_3HC_4 Domain by ^{1}H-nuclear Magnetic Resonance Spectroscopy. A New Structural Class of Zinc-finger, **237**, 201–211.

CAD
Revision in Sequence of CAD Aspartate Transcarbamylase Domain of *Drosophila*, **243**, 364–366.

Caenorhabditis
Alternative Splicing Leads to Two Cholinergic Proteins in *Caenorhabditis elegans*, **241**, 627–630.

Caged compounds
On the Photochemical Release of Phosphate from 3,5-Dinitrophenyl Phosphate in a Protein Crystal, **236**, 995–1000.

Calbindin
The Human Calbindin-D_{9k} Gene. Complete Structure and Implications on Steroid Hormone Regulation, **235**, 1231–1238.

Calcium
Refined Molecular Structure of Pig Pancreatic α-Amylase at 2·1 Å Resolution, **235**, 1560–1584.
Formation of Two-dimensional Arrays of Annexin V on Phosphatidylserine-containing Liposomes, **236**, 199–208.
Calcium Ion-induced Structural Changes in Bacteriophage ϕX174, **244**, 291–300.

Calcium activated protein
Crystallization and Preliminary Crystallographic Analysis of Sfericase. A *Bacillus sphaericus* Calcium-Dependent Serine Proteinase, **235**, 760–762.

Calcium affinity
Changes in Calcium and Collagen IV Binding Caused by Mutations in the EF Hand and Other Domains of Extracellular Matrix Protein BM40 (SPARC, Osteonectin), **238**, 563–574.

Calcium binding
Crystal Structure of the 50 kDa Metallo Protease from *Serratia marcescens*, **242**, 244–251.

Calcium binding protein
Crystallization of Canine Cardiac Calsequestrin, **235**, 357–360.

Calcium co-ordination
Crystal and Molecular Structure of Barley α-Amylase, **239**, 104–121.

Calcium phosphate
A Unique Protonated Phosphate Group in Bone Mineral Not Present in Synthetic Calcium Phosphates. Identification by Phosphorous-31 Solid State NMR Spectroscopy, **244**, 423–435.

Calcium-binding protein
Refined Crystal Structure of Rat Parvalbumin, a Mammalian α-lineage Parvalbumin, at 2·0 Å Resolution, **235**, 718–732.

Calicivirus
Three-dimensional Structure of Calicivirus, **240**, 256–264.

Calmodulin
Two-dimensional NMR Studies of Selenomethionyl Calmodulin, **239**, 545–554.
Investigating the High Affinity and Low Sequence Specificity of Calmodulin Binding to its Targets, **244**, 554–571.

Calorimetry
see also Thermodynamics.
Bacteriophage T7 RNA Polymerase and Its Active-site Mutants. Kinetic, Spectroscopic and Calorimetric Characterization, **237**, 5–19.
Thermodynamics of RNA Folding in a Conserved Ribosomal RNA Domain, **237**, 560–576.
A Thermodynamic Study of the *trp* Repressor–Operator Interaction, **238**, 669–681.
Thermodynamics of Folding a Pseudoknotted mRNA Fragment, **241**, 246–262.
Residual Structure in a Staphylococcal Nuclease Fragment. Is It a Molten Globule and is Its Unfolding a First-order Phase Transition?, **243**, 93–99.

Calsequestrin
Crystallization of Canine Cardiac Calsequestrin, **235**, 357–360.

cAMP receptor protein (CRP) ***see*** **Cyclic AMP receptor protein**

Candida albicans
Crystallization and Preliminary X-ray Analysis of *Candida albicans* Phosphomannose Isomerase, **237**, 349–350.

Candida antarctica
Crystallization and Preliminary X-ray Studies of Lipase B from *Candida antarctica*, **235**, 790–792.

Canonical ensemble
Sequence Statistics Reliably Predict Stabilizing Mutations in a Protein Domain, **240**, 188–192.

Carbamate kinase
Crystallization, Characterization and Preliminary Crystallographic Studies of Carbamate Kinase of *Streptococcus faecium*, **235**, 1345–1347.

Carbamyl phosphate synthetase III
Carbamyl Phosphate Synthetase III, an Evolutionary Intermediate in the Transition Between Glutamine-dependent and Ammonia-dependent Carbamyl Phosphate Synthetases, **243**, 131–140.

Carbohydrase mechanisms
Refined Crystal Structures of Glucoamylase from *Aspergillus awamori* var. *X100*, **238**, 575–591.

Carbonic anhydrase
Drug–Protein Interactions. Refined Structures of Three Sulfonamide Drug Complexes of Human Carbonic Anhydrase I Enzyme, **243**, 298–309.

Carbonic anhydrase structure
Enzyme–Substrate Interactions. Structure of Human Carbonic Anhydrase I Complexed with Bicarbonate, **241**, 226–232.
Drug–Protein Interactions. Refined Structures of Three Sulfonamide Drug Complexes of Human Carbonic Anhydrase I Enzyme, **243**, 298–309.

Carbonmonoxide hemoglobin
The 1·8 Å Structure of Carbonmonoxy-β_4 Hemoglobin. Analysis of Homotetramer with the R Quaternary Structure of Liganded $\alpha_2\beta_2$ Hemoglobin, **236**, 817–830.
Glycera dibranchiata Hemoglobin. X-ray Structure of Carbonmonoxide Hemoglobin at 1·5 Å Resolution, **238**, 42–53.

Carbonyl reductase
Expression, Crystallization and Preliminary Crystallographic Analysis of Human Carbonyl Reductase, **244**, 659–664.

Carboxy termini
A β-Tubulin Gene of *Naegleria* Encodes a Carboxy-terminal Tyrosine. Aromatic Amino Acids Are Conserved at Carboxy Termini, **235**, 377–388.

Carboxyl-carboxylate pairs
Structure Determination of Cucumber Green Mottle Mosaic Virus by X-ray Fiber Diffraction. Significance for the Evolution of Tobamoviruses, **239**, 371–384.

Cardiotoxin
Cardiotoxin III from the Taiwan Cobra (*Naja naja atra*). Determination of Structure in Solution and Comparison with Short Neurotoxins, **235**, 1291–1301.
X-ray Structure at 1·55 Å of Toxin γ, a Cardiotoxin from *Naja nigricollis* Venom. Crystal Packing Reveals a Model for Insertion into Membranes, **239**, 122–136.
Structure of Cobra Cardiotoxin CTXI as Derived from Nuclear Magnetic Resonance Spectroscopy and Distance Geometry Calculations, **240**, 445–458.
Proton NMR Studies of the Structural and Dynamical Effect of Chemical Modification of a Single Aromatic Side-chain in a Snake Cardiotoxin. Relation to the Structure of the Putative Binding Site and the Cytolytic Activity of the Toxin, **243**, 719–735.

Casein kinase-2 (CK-2)
The Human Immunodeficiency Virus Type 1 Encoded Vpu Protein is Phosphorylated by Casein Kinase-2 (CK-2) at Positions Ser52 and Ser56 within a Predicted α-Helix-Turn-α-Helix-Motif, **236**, 16–25.
Phosphorylation of the C-terminal Domain of Yeast Topoisomerase II by Casein Kinase II Affects DNA-Protein Interaction, **243**, 10–24.

Catabolite
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP) I. Saturation and Alanine-scanning Mutagenesis, **243**, 595–602.
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP). II. Role at Class I and Class II CAP-dependent Promoters, **243**, 603–610.

Catalytic antibody
Catalytic Antibody Model and Mutagenesis Implicate Arginine in Transition-state Stabilization, **235**, 1098–1116.

Catalytic mechanism
Cytidine Deaminase. The 2·3 Å Crystal Structure of an Enzyme : Transition-state Analog Complex, **235**, 635–656.
Crystal Structure of the Mutant D52S Hen Egg White Lysozyme with an Oligosaccharide Product, **243**, 856–872.

Catalytic RNA
Peptide Antibiotics of the Tuberactinomycin Family as Inhibitors of Group I Intron RNA Splicing, **236**, 1001–1010.
Characterization of the *Borrelia burgdorferi* RNase P RNA Gene Reveals a Novel Tertiary Interaction, **241**, 1–6.
Structure-mapping of the Hairpin Ribozyme. Magnesium-dependent Folding and Evidence for Tertiary Interactions within the Ribozyme-Substrate Complex, **244**, 52–63.
Cleavage Site Selection by M1 RNA, the Catalytic Subunit of *Escherichia coli* RNase P, is influenced by pH, **244**, 511–521.

Catalytic triad
A Graph-theoretic Approach to the Identification of Three-dimensional Patterns of Amino Acid Side-chains in Protein Structures, **243**, 327–344.

Cation binding
Conformational Analysis of Carboxylate and Carboxamide Side-chains Bound to Cations, **239**, 306–314.

Caulobacter crescentus
A *Caulobacter* DNA Methyltransferase that Functions only in the Predivisional Cell, **235**, 472–485.
Caulobacter Flagellar Function, but not Assembly, Requires FliL, a Non-polarly Localized Membrane Protein Present in all Cell Types, **243**, 227–244.

CCAAT binding transcription factor
The Genes for Transcription Factor Nuclear Factor I Give Rise to Corresponding Splice Variants between Vertebrate Species, **238**, 860–865.

ccd
The *parDE* Operon of the Broad-host-range Plasmid RK2 Specifies Growth Inhibition Associated with Plasmid Loss, **237**, 35–51.
Host-inhibitory Functions Encoded by Promiscuous Plasmids. Transient Arrest of *Escherichia coli* Segregants that Fail to Inherit Plasmid RK2, **237**, 52–64.

CD
Bacteriophage T7 RNA Polymerase and Its Active-site Mutants. Kinetic, Spectroscopic and Calorimetric Characterization, **237**, 5–19.

CD2
Many of the Immunoglobulin Superfamily Domains in Cell Adhesion Molecules and Surface Receptors Belong to a New Structural Set Which is Close to That Containing Variable Domains, **238**, 528–539.

CD4
Many of the Immunoglobulin Superfamily Domains in Cell Adhesion Molecules and Surface Receptors Belong to a New Structural Set Which is Close to That Containing Variable Domains, **238**, 528–539.
Myristoylation-dependent Binding of HIV-1 Nef to CD4, **241**, 136–142.

CD8
Many of the Immunoglobulin Superfamily Domains in Cell Adhesion Molecules and Surface Receptors Belong to a New Structural Set Which is Close to That Containing Variable Domains, **238**, 528–539.

CDNA cloning
Arabidopsis thaliana NAPHP Thioredoxin Reductase. cDNA Characterization and Expression of the Recombinant Protein in *Escherichia coli*, **235**, 1357–1363.

cDNA cloning
Non-phosphorylating GAPDH of Higher Plants is a Member of the Aldehyde Dehydrogenase Superfamily with no Sequence Homology to Phosphorylating GAPDH, **237**, 165–171.
Characterization by cDNA Cloning of Two New Human Protein Kinases. Evidence by Sequence Comparison of a New Family of Mammalian Protein Kinases, **244**, 665–672.

Cell adhesion
Crystal Structure of the Tenth Type III Cell Adhesion Module of Human Fibronectin, **236**, 1079–1092.
Crystals of the Cell-binding Module of Fibronectin Obtained from a Series of Recombinant Fragments Differing in Length, **238**, 123–127.

Cell adhesion molecule
see also CD2; CD4; CD8.
Expression and Crystallization of a Soluble Form of *Drosophila* Fasciclin III, **241**, 483–487.

Cell cycle
SAV, an Archaebacterial Gene with Extensive Homology to a Family of Highly Conserved Eukaryotic ATPases, **235**, 396–401.
A *Caulobacter* DNA Methyltransferase that Functions only in the Predivisional Cell, **235**, 472–485.
Identification, Molecular Cloning, Expression and Chromosome Mapping of a Family of Transformation Upregulated hnRNP-K Proteins Derived by Alternative Splicing, **236**, 33–48.

Cell division
Host-inhibitory Functions Encoded by Promiscuous Plasmids. Transient Arrest of *Escherichia coli* Segregants that Fail to Inherit Plasmid RK2, **237**, 52–64.

Cell wall synthesis
Crystallization and Preliminary X-ray Analysis of *Candida albicans* Phosphomannose Isomerase, **237**, 349–350.

Cellobiose transport
Crystallization of Enzyme IIB of the Cellobiose-specific Phosphotransferase System of *Escherichia coli*, **239**, 588–590.

Cell-surface polysaccharide antigen
Exploring the Mimicry of Polysaccharide Antigens by Anti-idiotypic Antibodies. The Crystallization, Molecular Replacement, and Refinement to 2·8 Å Resolution of an Idiotope–Anti-idiotope-Fab Complex and of the Unliganded-Anti-idiotope Fab, **241**, 691–705.

Cellular morphology
A *Caulobacter* DNA Methyltransferase that Functions only in the Predivisional Cell, **235**, 472–485.

Cellulase
Crystallization and Preliminary X-ray Diffraction Studies of an Endoglucanase from *Aspergillus aculeatus*, **241**, 278–280.
Crystallization and Preliminary X-ray Analysis of the Major Cellulose-binding Domain of the Cellulosome from *Clostridium thermocellum*, **244**, 236–237.

Cellulose-binding domain
Crystallization and Preliminary X-ray Analysis of the Major Cellulose-binding Domain of the Cellulosome from *Clostridium thermocellum*, **244**, 236–237.

CEN4
Unwound Regions in Yeast Centromere IV DNA, **243**, 179–189.

Central domain
Specialized Ribosomes Allow for the Study of Mutations in Functionally Important Regions in 16 S rRNA, without Affecting Cell Growth. The Identification of Functional Regions in the Central Domain of 16 S rRNA, **237**, 368–377.

Centromere
DNA Sequence GCGAATGAGC Containing the Human Centromere Core Sequence GAAT Forms a Self-complementary Duplex with Sheared G·A Pairs in Solution, **241**, 467–479.
Unwound Regions in Yeast Centromere IV DNA, **243**, 179–189.
The Unusual Structure of the Human Centromere $(GGA)_2$ Motif. Unpaired Guanosine Residues Stacked Between Sheared G·A Pairs, **244**, 259–268.

Cephalosporins
TEM β-Lactamase Mutants Hydrolysing Third-generation Cephalosporins. A Kinetic and Molecular Modelling Analysis, **244**, 625–639.

cha-1
Alternative Splicing Leads to Two Cholinergic Proteins in *Caenorhabditis elegans*, **241**, 627–630.

α chain
Crystallization and Preliminary X-ray Diffraction Study of a Bacterially Produced T-cell Antigen Receptor Vα Domain, **239**, 339–341.

Chain reversal
Backbone Flexibility and Stability of Reverse Turn Conformation in a Model System, **235**, 682–694.

β-chain
Crystallization and Preliminary X-ray Diffraction Analysis of the β-Chain of a T-cell Antigen Receptor, **235**, 795–797.

Channel proteins
Transmembrane Aromatic Amino Acid Distribution in P-glycoprotein. A Functional Role in Broad Substrate Specificity, **235**, 554–564.

Chaperones
see also Molecular chaperones.
Prediction of an Inter-residue Interaction in the Chaperonin GroEL from Multiple Sequence Alignment is Confirmed by Double-mutant Cycle Analysis, **238**, 133–138.
Different Peptide Binding Specificities of hsp70 Family Members, **241**, 133–135.
Determinants of Receptor Specificity of Coliphages of the T4 Family. A Chaperone Alters the Host Range, **241**, 524–533.
Two Lines of Allosteric Communication in the Oligomeric Chaperonin GroEL are Revealed by the Single Mutation Arg196→Ala, **243**, 397–401.
Chaperone-dependent Folding and Activation of Ribosome-bound Nascent Rhodanese. Analysis by Fluorescence, **244**, 319–331.

Chaperonin
Folding Intermediate Binds to the Bottom of Bullet-shaped Holo-chaperonin and is Readily Accessible to Antibody, **236**, 691–696.
Prediction of an Inter-residue Interaction in the Chaperonin GroEL from Multiple Sequence Alignment is Confirmed by Double-mutant Cycle Analysis, **238**, 133–138.
The Molecular Chaperonin TF55 from the Thermophilic Archaeon *Sulfolobus solfataricus*. A Biochemical and Structural Characterization, **242**, 397–407.
Two Lines of Allosteric Communication in the Oligomeric Chaperonin GroEL are Revealed by the Single Mutation Arg196→Ala, **243**, 397–401.

Charge interactions
Improved Continuum Electrostatic Modelling in Proteins, with Comparison to Experiment, **236**, 887–903.

Chemical modifications
Proton NMR Studies of the Structural and Dynamical Effect of Chemical Modification of a Single Aromatic Side-chain in a Snake Cardiotoxin. Relation to the Structure of the Putative Binding Site and the Cytolytic Activity of the Toxin, **243**, 719–735.

Chemical probing
Selective Perturbation of G530 of 16 S rRNA by Translational Miscoding Agents and a Streptomycin-dependence Mutation in Protein S12, **235**, 156–172.

Chemical shift
^{1}H Nuclear Magnetic Resonance Studies of Hen Lysozyme-*N*-Acetylglucosamine Oligosaccharide Complexes in Solution. Application of Chemical Shifts for the Comparison of Conformational Changes in Solution and in the Crystal, **235**, 1072–1087.

Chemokines
The Solution Structure of Melanoma Growth Stimulating Activity, **242**, 252–270.
Crystallization and Preliminary X-ray Diffraction Studies of Human RANTES, **242**, 589–590.

Chemosensor
Transmembrane Signaling. Mutational Analysis of the Cytoplasmic Linker Region of Taz1-1, a Tar-EnvZ Chimeric Receptor in *Escherichia coli*, **244**, 477–481.

Chemotaxis
Isolation, Characterization and Structure of Bacterial Flagellar Motors Containing the Switch Complex, **235**, 1261–1270.
A Mutant Hook-associated Protein (HAP3) Facilitates Torsionally Induced Transformations of the Flagellar Filament of *Escherichia coli*, **238**, 173–186.
Magnesium Binding to the Bacterial Chemotaxis Protein CheY Results in Large Conformational Changes Involving its Functional Surface, **238**, 489–495.

CheY
Magnesium Binding to the Bacterial Chemotaxis Protein CheY Results in Large Conformational Changes Involving its Functional Surface, **238**, 489–495.

Chicken erythrocytes
On the Location of Linker DNA in the Chromatin Fiber. Studies with Immobilized and Soluble Micrococcal Nuclease, **235**, 871–880.

Chimeric antibody
Idiotope Determining Regions of a Mouse Monoclonal Antibody and Its Humanized Versions. Identification of Framework Residues that Affect Idiotype Expression, **235**, 53–60.
Defining the Requirements for an Antibody Epitope on Influenza Virus Neuraminidase: How Tolerant are Protein Epitopes?, **235**, 747–759.

Chimeric decamer
A Single 2′-Hydroxyl Group Converts *B*-DNA to *A*-DNA. Crystal Structure of the DNA-RNA Chimeric Decamer Duplex d(CCGGC)r(G)d(CCGG) with a Novel Intermolecular G·C Base-paired Quadruplet, **236**, 275–285.

Chinese hamster ovary D422 cells
Single Base-Pair Deletions Induced by Bleomycin at Potential Double-strand Cleavage Sites in the *aprt* Gene of Stationary Phase Chinese Hamster Ovary D422 Cells, **243**, 216–226.

Chiton
Three-dimensional Reconstruction from a Frozen-hydrated Specimen of the Chiton *Lepidochiton sp.* Hemocyanin, **244**, 640–647.

Chlamydomonas
Comparative Structure and Genomic Organization of the Discontinuous Mitochondrial Ribosomal RNA Genes of *Chlamydomonas eugametos* and *Chlamydomonas reinhardtii*, **241**, 298–311.

Chlamydomonas reinhardtii
A Chloroplast Group I Intron Undergoes the First Step of Reverse Splicing into Host Cytoplasmic 5·8 S rRNA. Implications for Intron-mediated RNA Recombination, Intron Transposition and 5·8 S rRNA Structure, **236**, 455–468.
Comparative Structure and Genomic Organization of the Discontinuous Mitochondrial Ribosomal RNA Genes of *Chlamydomonas eugametos* and *Chlamydomonas reinhardtii*, **241**, 298–311.

Chloride
Chloride Masks Effects of Opposing Positive Charges in Hb A and Hb Hinsdale (β139 Asn→Lys) that can Modulate Cooperativity as well as Oxygen Affinity, **239**, 561–568.

Chloride channel
A Voltage-gated Chloride Channel in the Yeast *Saccharomyces cerevisiae*, **242**, 595–598.

Chloride ions
Refined Molecular Structure of Pig Pancreatic α-Amylase at 2·1 Å Resolution, **235**, 1560–1584.
The Chloride Effect in Human Haemoglobin. A New Kind of Allosteric Mechanism, **239**, 555–560.

Chlorogloeopsis
Heterocyst-forming Filamentous Cyanobacteria Encode Proteins that Resemble Eukaryotic RNA-binding Proteins of the RNP Family, **235**, 1162–1170.

Chlorophyll biosynthesis
Crystallization and Preliminary X-ray Analysis of Wild-type and K272A Mutant Glutamate 1-Semialdehyde Aminotransferase from *Synechococcus*, **242**, 591–594.

Chloroplast
A Chloroplast Group I Intron Undergoes the First Step of Reverse Splicing into Host Cytoplasmic 5·8 S rRNA. Implications for Intron-mediated RNA Recombination, Intron Transposition and 5·8 S rRNA Structure, **236**, 455–468.

Protein Substitution in Chloroplast Ribosome Evolution. A Eukaryotic Cytosolic Protein has Replaced its Organelle Homologue (L23) in Spinach, **240**, 28–41.

Choline acetyltransferase
Alternative Splicing Leads to Two Cholinergic Proteins in *Caenorhabditis elegans*, **241**, 627–630.

Chorismate mutase
The Monofunctional Chorismate Mutase from *Bacillus subtilis*. Structure Determination of Chorismate Mutase and Its Complexes with a Transition State Analog and Prephenate, and Implications for the Mechanism of the Enzymatic Reaction, **240**, 476–500.
The Crystallization and Preliminary X-ray Analysis of Allosteric Chorismate Mutase, **241**, 273–274.

Chromatin
see also Nucleosome.
On the Location of Linker DNA in the Chromatin Fiber. Studies with Immobilized and Soluble Micrococcal Nuclease, **235**, 871–880.
The Footprint of Chromosomal Proteins HMG-14 and HMG-17 on Chromatin Subunits, **236**, 189–198.
Nucleosome Positioning on Chicken and Human Globin Gene Promoters *in Vitro*. Novel Mapping Techniques, **237**, 401–414.

Chromatin condensation
Dynamics of the Nucleoprotein Structure of Simian Virus 40 Regulatory Region During Viral Development, **238**, 501–513.

Chromatin function
Evidence Indicating Proximity in the Nucleosome Between the Histone H4 N Termini and the Globular Domain of Histone H1, **243**, 48–59.

Chromatin structure
Periodicity of Dinucleotides in Nucleosomes Derived from Simian Virus 40 Chromatin, **235**, 198–208.
DNA Sequence Organization in Chromatosomes, **235**, 855–870.
Dynamics of the Nucleoprotein Structure of Simian Virus 40 Regulatory Region During Viral Development, **238**, 501–513.
The *Drosophila Broad-complex* Regulates Developmental Changes in Transcription and Chromatin Structure of the 67B Heat-shock Gene Cluster, **241**, 353–362.

Chromatosome
DNA Sequence Organization in Chromatosomes, **235**, 855–870.

Chromosomal assignment
The OZF Gene Encodes a Protein Consisting Essentially of Zinc Finger Motifs, **236**, 399–404.

Chromosome end formation
Chromosome End Formation and Internal Sequence Elimination as Alternative Genomic Rearrangements in the Ciliate *Paramecium*, **236**, 421–426.

Chromosome X
A Voltage-gated Chloride Channel in the Yeast *Saccharomyces cerevisiae*, **242**, 595–598.

Chymotrypsin inhibitor
The Three-dimensional Solution Structure by ^{1}H NMR of a 6-kDa Proteinase Inhibitor Isolated from the Stigma of *Nicotiana alata*, **242**, 231–243.

Ciliate
Chromosome End Formation and Internal Sequence Elimination as Alternative Genomic Rearrangements in the Ciliate *Paramecium*, **236**, 421–426.

Circular dichroism
Interrelations of Secondary Structure Stability and DNA-binding Affinity in the Bacteriophage SPO1-encoded Type II DNA-binding Protein TF1, **236**, 139–150.
High Level Expression and Rational Mutagenesis of a Designed Protein, the Minibody. From an Insoluble to a Soluble Molecule, **236**, 649–659.
Helix Stop and Start Signals in Peptides and Proteins. The Capping Box does not Necessarily Prevent Helix Elongation, **242**, 487–496.
Protein Secondary Structure from Circular Dichroism Spectroscopy. Combining Variable Selection Principle and Cluster Analysis with Neural Network, Ridge Regression and Self-consistent Methods, **242**, 497–507.
Helicity, Circular Dichroism and Molecular Dynamics of Proteins, **243**, 173–178.

***cis* peptide bond**
Generation of a Non-prolyl *cis* Peptide Bond in Ribonuclease T_1, **240**, 288–293.

Claisen rearrangement
The Monofunctional Chorismate Mutase from *Bacillus subtilis*. Structure Determination of Chorismate Mutase and Its Complexes with a Transition State Analog and Prephenate, and Implications for the Mechanism of the Enzymatic Reaction, **240**, 476–500.

Cleavable complex
Conformational Drug Determinants of the Sequence Specificity of Drug-stimulated Topoisomerase II DNA Cleavage, **235**, 1218–1230.

clk
Characterization by cDNA Cloning of Two New Human Protein Kinases. Evidence by Sequence Comparison of a New Family of Mammalian Protein Kinases, **244**, 665–672.

Cloning
Preliminary X-ray Analysis of a Truncated Form of Recombinant Fructose-2,6-bisphosphatase, **235**, 1147–1151.
The OZF Gene Encodes a Protein Consisting Essentially of Zinc Finger Motifs, **236**, 399–404.

Closed circular DNA
Nucleosome Structural Changes Due to Acetylation, **236**, 685–690.

Clostridium acidurici
Refined Crystal Structure of the 2[4Fe-4S] Ferredoxin from *Clostridium acidurici* at 1·84 Å Resolution, **243**, 683–695.

Clostridium thermocellum
Crystallization and Preliminary Diffraction Analysis of the Catalytic Domain of Xylanase Z from *Clostridium thermocellum*, **235**, 1348–1350.

Cluster analysis
Protein Secondary Structure from Circular Dichroism Spectroscopy. Combining Variable Selection Principle and Cluster Analysis with Neural Network, Ridge Regression and Self-consistent Methods, **242**, 497–507.

Cobalt
Crystallographic Study of Azide-inhibited Bovine Cu,Zn Superoxide Dismutase, **240**, 179–183.

Co-crystallization
Crystallization and Preliminary X-ray Analysis of Restriction Endonuclease *Bam*HI–DNA Complex, **239**, 430–432.

Coding
tRNA Structure and Ribosomal Function. I. tRNA Nucleotide 27-43 Mutations Enhance First Position Wobble, **235**, 1381–1394.
tRNA Structure and Ribosomal Function. II. Interaction Between Anticodon Helix and other tRNA Mutations, **235**, 1395–1405.

Codon bias
The Concentration of Polypeptide Chain Release Factors 1 and 2 at Different Growth Rates of *Escherichia coli*, **238**, 302–308.

Codon context
Analysis of Action of Wobble Nucleoside Modifications on Codon-Anticodon Pairing within the Ribosome, **240**, 8–19.

Codon positions
A Graphic Approach to Analyzing Codon Usage in 1562 *Escherichia coli* Protein Coding Sequences, **238**, 1–8.

Codon-anticodon duplex
Analysis of Action of Wobble Nucleoside Modifications on Codon-Anticodon Pairing within the Ribosome, **240**, 8–19.

Coenzyme B_{12}
Crystallization and Preliminary X-ray Diffraction Studies of a Corrinoid Protein from *Sporomusa ovata*, **236**, 388–389.

Coiled coil
Conformation and Phasing of Dystrophin Structural Repeats, **235**, 1271–1277.
Coiled-coil Packing in Spermidine-induced Tropomyosin Crystals. A Comparative Study of Three Forms, **236**, 1212–1226.
Prediction of the Folding Pathways and Structure of the GCN4 Leucine Zipper, **237**, 361–367.
The Role of Interhelical Ionic Interactions in Controlling Protein Folding and Stability. *De Novo* Designed Synthetic Two-stranded αHelical Coiled-Coils, **237**, 500–512.
A Myosin from a Higher Plant has Structural Similarities to Class V Myosins, **239**, 591–597.
Fibritin Encoded by Bacteriophage T4 Gene wac has a Parallel Triple-stranded α-Helical Coiled-coil Structure, **242**, 470–486.

Colicin
Membrane-bound Form of the Pore-forming Domain of Colicin A. A Neutron Scattering Study, **235**, 898–907.

Collagen
Native Collagen Fibrils From Echinoderms are Molecularly Bipolar, **235**, 73–79.
Vertebrate (Chick) Collagen Fibrils Formed *in Vivo* Can Exhibit a Reversal in Molecular Polarity, **235**, 80–83.
An Ultrastructural, Time-resolved Study of Freezing in the Corneal Stroma, **236**, 749–758.
Collagen Fibril Structure in Lamprey, **243**, 38–47.

Collagen I
Delayed Triple Helix Formation of Mutant Collagen from Patients with Osteogenesis Imperfecta, **236**, 940–949.

Collagen type IV
Changes in Calcium and Collagen IV Binding Caused by Mutations in the EF Hand and Other Domains of Extracellular Matrix Protein BM40 (SPARC, Osteonectin), **238**, 563–574.

Collagen type VI
The Secondary Structure of the von Willebrand Factor Type A Domain in Factor B of Human Complement by Fourier Transform Infrared Spectroscopy. Its Occurrence in Collagen Types VI, VII, XII and XIV, the Integrins and Other Proteins by Averaged Structure Predictions, **238**, 104–119.

Collagenase
Preliminary X-ray Diffraction Studies of Recombinant 19 kDa Human Fibroblast Collagenase, **236**, 1410–1412.

Collective parameters
A Graphic Approach to Analyzing Codon Usage in 1562 *Escherichia coli* Protein Coding Sequences, **238**, 1–8.

Combinatorial cassette mutagenesis
Probing the Informational Content of *Escherichia coli* σ^{70} Region 2.3 by Combinatorial Cassette Mutagenesis, **235**, 1489–1500.

Compactness
Does Compactness Induce Secondary Structure in Proteins? A Study of Poly-alanine Chains Computed by Distance Geometry, **241**, 557–573.

Comparative sequence analysis
A Major Family of Motifs Involving G·A Mismatches in Ribosomal RNA, **242**, 1–8.

Compensating changes
Structural Features can be Unconserved in Proteins with Similar Folds. An Analysis of Side-chain to Side-chain Contacts Secondary Structure and Accessibility, **244**, 332–350.
Bases Defining an Ammonium and Magnesium Ion-Dependent Tertiary Structure Within the Large Subunit Ribosomal RNA, **244**, 572–585.

Competence
Three Highly Homologous Membrane-bound Lipoproteins Participate in Oligopeptide Transport by the Ami System of the Gram-positive *Streptococcus pneumoniae*, **241**, 44–58.

Competition
Amino/Aromatic Interactions in Proteins: Is the Evidence Stacked Against Hydrogen Bonding?, **239**, 315–331.

Competition elution
Selection of Phage-displayed Antibodies Specific for a Cytoskeletal Antigen by Competitive Elution with a Monoclonal Antibody, **244**, 353–360.

Complement
Structure of Human Factor D. A Complement System Protein at 2·0 Å Resolution, **235**, 695–708.
Preliminary Crystallographic Studies on Human Complement Pro-factor D, **235**, 1144–1146.
The Secondary Structure of the von Willebrand Factor Type A Domain in Factor B of Human Complement by Fourier Transform Infrared Spectroscopy. Its Occurrence in Collagen Types VI, VII, XII and XIV, the Integrins and Other Proteins by Averaged Structure Predictions, **238**, 104–119.

Complementarity-determining region
The *de Novo* Design of an Antibody Combining Site. Crystallographic Analysis of the V_L Domain Confirms the Structural Model, **238**, 226–244.

Complex
Complex between Bovine Ribonuclease A and Porcine Ribonuclease Inhibitor Crystallizes in a Similar Unit Cell as Free Ribonuclease Inhibitor, **241**, 288–291.

Compositions
Discrimination of Intracellular and Extracellular Proteins Using Amino Acid Composition and Residue-pair Frequencies, **238**, 54–61.

Computer modeling
Fitting the Structurally Diverse Animal Mitochondrial $tRNAs^{Ser}$ to Common Three-dimensional Constraints, **236**, 982–989.

Computer reconstruction
Protein Subunit Structures in the Herpes Simplex Virus A-capsid Determined from 400 kV Spot-scan Electron Cryomicroscopy, **242**, 456–469.

Computer simulation
Prediction of the Positioning of the Seven Transmembrane α-helices of Bacteriorhodopsin. A Molecular Simulation Study, **236**, 1105–1122.
Investigation of Shape Variations in the Antibody Binding Site by Molecular Dynamics Computer Simulation, **236**, 1186–1195.

Conformation
Changes in Calcium and Collagen IV Binding Caused by Mutations in the EF Hand and Other Domains of Extracellular Matrix Protein BM40 (SPARC, Osteonectin), **238**, 563–574.

Conformational change
Crystal Structure of *Escherichia coli* Thioredoxin Reductase Refined at 2 Å Resolution. Implications for a Large Conformational Change during Catalysis, **236**, 800–816.
Crystalline Mitochondrial Aspartate Aminotransferase Exists in Only Two Conformations, **236**, 963–968.
Quantitative Analysis of Crystal Growth. Tryptophanyl-tRNA Synthetase Crystal Polymorphism and Its Relationship to Catalysis, **238**, 346–365.
Crystal Structures of *Escherichia coli* Aspartate Aminotransferase in Two Conformations. Comparison of an Unliganded Open and Two Liganded Closed Forms, **239**, 285–305.
Thermodynamics of Substrates and Reversible Inhibitors Binding to the Active Site Cleft of Human α-thrombin, **239**, 569–577.

Three-dimensional Structures of the Free and the Antigen-complexed Fab from Monoclonal Anti-lysozyme Antibody D44.1, **243**, 767–781.
Synthesis and Recognition of Aspartyl-adenylate by *Thermus thermophilus* Aspartyl-tRNA Synthetase, **244**, 158–167.

Conformational drift
Pressure Effects on Protein Flexibility: Monomeric Proteins, **242**, 291–301.

Conformational entropy
see also Entropy.
Ligand Docking to Proteins With Discrete Side-chain Flexibility, **235**, 345–356.
Application of a Self-consistent Mean Field Theory to Predict Protein Side-chains Conformation and Estimate Their Conformational Entropy, **239**, 249–275.
The Origins of Protein Secondary Structure. Effects of Packing Density and Hydrogen Bonding Studied by a Fast Conformational Search, **241**, 214–225.

Conformational heterogeneity
The 1·8 Å Structure of Carbonmonoxy-β_4 Hemoglobin. Analysis of Homotetramer with the R Quaternary Structure of Liganded $\alpha_2\beta_2$ Hemoglobin, **236**, 817–830.

Conformational isomer free energies
Symmetric Holliday Junction Crossover Isomers, **238**, 658–668.

Conformational search
Ligand Docking to Proteins With Discrete Side-chain Flexibility, **235**, 345–356.
Biased Probability Monte Carlo Conformational Searches and Electrostatic Calculations for Peptides and Proteins, **235**, 983–1002.
Combined Conformational Search and Finite-Difference Poisson–Boltzmann Approach for Flexible Docking. Application to an Operator Mutation in the λ Repressor-Operator Complex, **238**, 455–465.
Exploring Conformational Space with a Simple Lattice Model for Protein Structure, **243**, 668–682.

Conformational transitions
High-Resolution Crystallographic Analysis of a Co-operative Dimeric Hemoglobin, **235**, 657–681.

Conformation-specificity
The Characterization of p53 Binding Phage Isolated from Phage Peptide Display Libraries, **243**, 639–652.

Conjugal transfer
DNA Rearrangement of the Shufflon Determines Recipient Specificity in Liquid Mating of IncI1 Plasmid R64, **243**, 6–9.

Connecting peptide
Domain Interactions and Connecting Peptides in Lens Crystallins, **235**, 84–88.

Consensus sequences
Conserved Sequences in a Class of Rare Eukaryotic Nuclear Introns with Non-consensus Splice Sites, **239**, 357–365.

Conservation
A Structural Analysis of Phosphate and Sulphate Binding Sites in Proteins. Estimation of Propensities for Binding and Conservation of Phosphate Binding Sites, **242**, 321–329.

Conserved sequence motifs
Computer Analysis of Bacterial Haloacid Dehalogenases Defines a Large Superfamily of Hydrolases with Diverse Specificity. Application of an Iterative Approach to Database Search, **244**, 125–132.

Contrast variation
Structural Model of the 50 S Subunit of *Escherichia coli* Ribosomes from Solution Scattering. I. X-ray Synchrotron Radiation Study, **240**, 66–77.
Structural Model of the 50 S Subunit of *Escherichia coli* Ribosomes from Solution Scattering. II. Neutron Scattering Study, **240**, 78–86.

Convergent evolution
Crystal Structure of a NAD-dependent D-Glycerate Dehydrogenase at 2·4 Å Resolution, **236**, 1123–1140.

Co-operative binding
Transcription of the *xyl* Operon is Controlled in *Bacillus subtilis* by Tandem Overlapping Operators Spaced by Four Base-pairs, **243**, 413–424.

Cooperativity
Cooperative DNA-Protein Interactions. Effects of Changing the Spacing Between Adjacent Binding Sites, **235**, 532–544.
High-Resolution Crystallographic Analysis of a Co-operative Dimeric Hemoglobin, **235**, 657–681.
Mapping the Functional Domains of Bacteriophage Lambda Integrase Protein, **235**, 908–925.
Co-operative Binding of *Escherichia coli* SSB Tetramers to Single-stranded DNA in the $(SSB)_{35}$ Binding Mode, **236**, 106–123.
The Interhexameric Contacts in the Four-hexameric Hemocyanin from the Tarantula *Eurypelma californicum*. A Tentative Mechanism for Cooperative Behavior, **237**, 464–478.
Thermodynamics of RNA Folding in a Conserved Ribosomal RNA Domain, **237**, 560–576.
Chloride Masks Effects of Opposing Positive Charges in Hb A and Hb Hinsdale (β139 Asn→Lys) that can Modulate Cooperativity as well as Oxygen Affinity, **239**, 561–568.
DNA-binding Parameters of the HU Protein of *Escherichia coli* to Cruciform DNA, **242**, 116–129.
Two Lines of Allosteric Communication in the Oligomeric Chaperonin GroEL are Revealed by the Single Mutation Arg196→Ala, **243**, 397–401.
DNA Conformational Changes Associated with the Cooperative Binding of cI-repressor of Bacteriophage λ to O_R, **244**, 494–510.

Copper
Conserved Patterns in the Cu,Zn Superoxide Dismutase Family, **238**, 366–386.
Crystallographic Study of Azide-inhibited Bovine Cu,Zn Superoxide Dismutase, **240**, 179–183.

Copper-amine oxidase
Crystallization and Preliminary X-ray Analysis of Copper Amine Oxidase from *Escherichia coli* K-12, **238**, 635–637.

Copper-containing enzyme
Crystal Structure of a Free Radical Enzyme, Galactose Oxidase, **238**, 794–814.

Core histones ***see*** **Histones**

Coregonid
Amplification of Distinct Subfamilies of Short Interspersed Elements During Evolution of the Salmonidae, **241**, 633–644.

Corn inhibitor
The Corn Inhibitor of Blood Coagulation Factor XIIa. Crystallization and Preliminary Crystallographic Analysis, **236**, 385–387.

Cornea
An Ultrastructural, Time-resolved Study of Freezing in the Corneal Stroma, **236**, 749–758.

Correlated mutations
Prediction of an Inter-residue Interaction in the Chaperonin GroEL from Multiple Sequence Alignment is Confirmed by Double-mutant Cycle Analysis, **238**, 133–138.
Structural Features can be Unconserved in Proteins with Similar Folds. An Analysis of Side-chain to Side-chain Contacts Secondary Structure and Accessibility, **244**, 332–350.

Corrinoid proteins
Crystallization and Preliminary X-ray Diffraction Studies of a Corrinoid Protein from *Sporomusa ovata*, **236**, 388–389.

Cospeciation
Molecular Phylogeny of the Alphaherpesvirinae Subfamily and a Proposed Evolutionary Timescale, **238**, 9–22.

Co-transformation
Segregation Properties of Bovine Papillomaviral Plasmid DNA, **236**, 480–490.

Coumarin
Crystallization of Inhibitor Complexes of an N-terminal 24 kDa Fragment of the DNA Gyrase B Protein, **241**, 128–130.

'Counterions' and DNA structure
The Twist, Writhe and Overall Shape of Supercoiled DNA Change During Counterion-induced Transition from a Loosely to a Tightly Interwound Superhelix. Possible Implications for DNA Structure *in Vivo*, **235**, 825–847.

Coupled transcription/translation
Chaperone-dependent Folding and Activation of Ribosome-bound Nascent Rhodanese. Analysis by Fluorescence, **244**, 319–331.

Covalently-attached intermediate
A Crystallographic Re-investigation into the Structure of *Streptomyces griseus* Proteinase A Reveals an Acyl-enzyme Intermediate, **241**, 574–587.

cpn60
The Symmetry of *Escherichia coli* cpn60 (GroEL) Determined by X-ray Crystallography, **235**, 47–52.

CRE
A *Cis*-acting Region Required for the Regulated Expression of *grg-1*, a Neurospora Glucose-repressible Gene. Two Regulatory Sites (CRE and NRS) are Required to Repress *grg-1* Expression, **237**, 65–74.

C-reactive protein
Crystallization and Preliminary X-ray Analysis of C-reactive Protein from Rat, **235**, 767–771.

Creatine
A Creatine Transporter cDNA from *Torpedo* Illustrates Structure/Function Relationships in the GABA/Noradrenaline Transporter Family, **241**, 317–324.

***p*-Cresolyl cobamide**
Crystallization and Preliminary X-ray Diffraction Studies of a Corrinoid Protein from *Sporomusa ovata*, **236**, 388–389.

Crossbridge mechanism
Equatorial A-band and I-band X-ray Diffraction from Relaxed and Active Fish Muscle. Further Details of Myosin Crossbridge Behaviour, **239**, 500–512.

Cross-link
Multiple Folded Conformations of a Hammerhead Ribozyme Domain under Cleavage Conditions, **239**, 366–370.
Analysis and Classification of Disulphide Connectivity in Proteins. The Entropic Effect of Cross-linkage, **244**, 448–463.

Cross-reactivity
Structural Analysis of Antibody Specificity. Detailed Comparison of Five Fab'-Steroid Complexes, **241**, 663–690.

Cross-validation
Protein Hydration Observed by X-ray Diffraction. Solvation Properties of Penicillopepsin and Neuraminidase Crystal Structures, **243**, 100–115.

Cruciform DNA
DNA-binding Parameters of the HU Protein of *Escherichia coli* to Cruciform DNA, **242**, 116–129.

Cryocrystallography
Crystals of a Fragment of Influenza Haemagglutinin in the Low pH Induced Conformation, **236**, 1262–1265.
Preliminary Crystallographic Studies of the Ligand-binding Domain of the Thyroid Hormone Receptor Complexed with Triiodothyronine, **237**, 236–239.

Cryoelectron microscopy
The Twist, Writhe and Overall Shape of Supercoiled DNA Change During Counterion-induced Transition from a Loosely to a Tightly Interwound Superhelix. Possible Implications for DNA Structure *in Vivo*, **235**, 825–847.
The Organization of the Spike Complex of Semliki Forest Virus, **236**, 572–583.
Three-dimensional Model of *Escherichia coli* Gyrase B Subunit Crystallized in Two-dimensions on Novobiocin-Linked Phospholipid Films, **236**, 618–628.
Coiled-coil Packing in Spermidine-induced Tropomyosin Crystals. A Comparative Study of Three Forms, **236**, 1212–1226.
Quaternary Structure of *Octopus vulgaris* Hemocyanin. Three-dimensional Reconstruction from Frozen-hydrated Specimens and Intramolecular Location of Functional Units O_ve and O_vb, **238**, 75–87.
Analysis of Electron Microscope Images and Electron Diffraction Patterns of Thin Crystals of Ø29 Connectors in Ice, **240**, 281–287.
Fungal Virus Capsids are Cytoplasmic Compartments for the Replication of Double-stranded RNA Formed as Icosahedral Shells of Asymmetric Gag Dimers, **244**, 255–258.

Crystal
Crystallization and Structure Determination of Bovine Profilin at 2·0 Å Resolution, **240**, 459–475.

Crystal growth
Quantitative Analysis of Crystal Growth. Tryptophanyl-tRNA Synthetase Crystal Polymorphism and Its Relationship to Catalysis, **238**, 346–365.

Crystal packing
Crystalline Mitochondrial Aspartate Aminotransferase Exists in Only Two Conformations, **236**, 963–968.
Nerve Growth Factor in Different Crystal Forms Displays Structural Flexibility and Reveals Zinc Binding Sites, **239**, 385–400.

Crystal structure
Structure of Human Factor D. A Complement System Protein at 2·0 Å Resolution, **235**, 695–708.
The Octameric Histone Core of the Nucleosome. Structural Issues Resolved, **236**, 179–188.
Local and Transmitted Conformational Changes on Complexation of an Anti-sweetener Fab, **236**, 247–274.
The Crystal Structure of Affinity-matured Human Growth Hormone at 2 Å Resolution, **236**, 286–299.
Nucleotide Sequence and X-ray Structure of Cyclodextrin Glycosyltransferase from *Bacillus circulans* Strain 251 in a Maltose-dependent Crystal Form, **236**, 590–600.
Structure of Tetraubiquitin Shows How Multiubiquitin Chains Can be Formed, **236**, 601–609.
High Resolution Structures of Holo and Apo Formate Dehydrogenase, **236**, 759–785.
Crystal Structure of the Tenth Type III Cell Adhesion Module of Human Fibronectin, **236**, 1079–1092.
Crystal Structure and Refinement of Cytochrome $P450_{terp}$ at 2·3 Å Resolution, **236**, 1169–1185.
Molecular Structure at 1·8 Å of Mouse Liver Class Pi Glutathione S-transferase Complexed with *S*-(*p*-Nitrobenzyl)glutathione and Other Inhibitors, **237**, 298–314.
Crystal Structure of Toxin II from the Scorpion *Androctonus australis* Hector Refined at 1·3 Å Resolution, **238**, 88–103.
Refined Structure of Transketolase from *Saccharomyces cerevisiae* at 2·0 Å Resolution, **238**, 387–404.
Magnesium Binding to the Bacterial Chemotaxis Protein CheY Results in Large Conformational Changes Involving its Functional Surface, **238**, 489–495.
Horse Pancreatic Lipase. The Crystal Structure Refined at 2·3 Å Resolution, **238**, 709–732.
Structure of Phaseolin at 2·2 Å Resolution. Implications for a Common Vicilin/Legumin Structure and the Genetic Engineering of Seed Storage Proteins, **238**, 748–776.

Crystallographic Study of Azide-inhibited Bovine Cu,Zn Superoxide Dismutase, **240**, 179–183.
The Refined Crystal Structure of Hexon, the Major Coat Protein of Adenovirus Type 2, at 2·9 Å Resolution, **242**, 430–455.
Preparation, Characterization and Crystallization of an Antibody Fab Fragment that Recognizes RNA. Crystal Structures of Native Fab and Three Fab-mononucleotide Complexes, **243**, 283–297.
Refined Crystal Structure of the 2[4Fe-4S] Ferredoxin from *Clostridium acidurici* at 1·84 Å Resolution, **243**, 683–695.
Structure of the Sulfide-reactive Hemoglobin from the Clam *Lucina pectinata*. Crystallographic Analysis at 1·5 Å Resolution, **244**, 86–99.
Crystal Structure of Bacteriophage fr Capsids at 3·5 Å Resolution, **244**, 279–290.
Structural Changes of Active Site Cleft and Different Saccharide Binding Modes in Human Lysozyme Co-crystallized with Hexa-*N*-acetyl-chitohexaose at pH 4·0, **244**, 522–540.

Crystalization

Crystallization and Preliminary X-ray Analysis of a Lipase from *Bacillus subtilis*, **238**, 857–859.

Crystallins

Domain Interactions and Connecting Peptides in Lens Crystallins, **235**, 84–88.
ζ-Crystallin: A Lens-specific Promoter and the Gene Recruitment of an Enzyme as a Crystallin, **236**, 669–678.
Close Packing of an Oligomeric Eye Lens β-Crystallin Induces Loss of Symmetry and Ordering of Sequence Extensions, **236**, 1250–1258.

Crystallization

Crystallographic Characterization and Molecular Symmetry of Edestin, a Legumin from Hemp, **235**, 361–363.
Crystallization and Preliminary X-ray Diffraction Studies on a Trypsin/Chymotripsin Double-headed Inhibitor from Horse Gram, **235**, 364–366.
Preliminary X-ray Crystallographic Analysis of Biotin Carboxylase Isolated from *Escherichia coli*, **235**, 367–369.
Crystallization of D-Lactate Dehydrogenase from *Lactobacillus bulgaricus*, **235**, 370–371.
Crystallization and Preliminary X-ray Analysis of the Monoclonal Anti-tumor Antibody BR96 and its Complex with the Le^y Determinant, **235**, 372–376.
Crystallization and Preliminary Crystallographic Analysis of Sfericase. A *Bacillus sphaericus* Calcium-Dependent Serine Proteinase, **235**, 760–762.
Crystallization and Preliminary X-ray Analysis of C-reactive Protein from Rat, **235**, 767–771.
Crystallographic Characterization of Pertactin, a Membrane-associated Protein from *Bordetella pertussis*, **235**, 772–773.
Sequence and Crystallization of *Escherichia coli* Dethiobiotin Synthetase, the Penultimate Enzyme of Biotin Biosynthesis, **235**, 774–776.
Crystallization and Preliminary Crystallographic Studies of *Saccharomyces cerevisiae* Alcohol Dehydrogenase I, **235**, 777–779.
Crystallization and X-ray Studies of the DNA-binding Domain of OmpR Protein, a Positive Regulator Involved in Activation of Osmoregularity Genes in *Escherichia coli*, **235**, 780–782.
Crystallization and Preliminary X-ray Investigation of Holotryptophanases from *Escherichia coli* and *Proteus vulgaris*, **235**, 783–786.
Crystallization and Preliminary X-ray Diffraction Studies of the Soluble 14 kDa β-Galactoside-binding Lectin from Bovine Heart, **235**, 787–789.
Crystallization and Preliminary X-ray Studies of Lipase B from *Candida antarctica*, **235**, 790–792.
Crystallization and Preliminary Crystallographic Data of Vitelline Membrane Outer Layer Protein 1 VMO1, **235**, 793–794.
Crystallization and Preliminary X-ray Diffraction Analysis of the β-Chain of a T-cell Antigen Receptor, **235**, 795–797.
Preliminary Analysis of Multiple Crystal Forms of the Bovine Cyclophilin–Cyclosporin A Complex, **235**, 1136–1140.
Crystallization and a Preliminary X-ray Diffraction Study of Macrophage Migration Inhibitory Factor from Human Lymphocytes, **235**, 1141–1143.
Preliminary Crystallographic Studies on Human Complement Pro-factor D, **235**, 1144–1146.
Preliminary X-ray Analysis of a Truncated Form of Recombinant Fructose-2,6-bisphosphatase, **235**, 1147–1151.
A New Crystal Form of Abrin-a from the Seeds of *Abrus precatorius*, **235**, 1152–1153.
Crystallization and Preliminary X-ray Investigation of a Recombinant Outer Membrane Protein from *Neisseria meningitis*, **235**, 1154–1155.
Crystallization and Preliminary X-ray Analysis of the Superoxide Dismutase from *Mycobacterium tuberculosis*, **235**, 1156–1158.
Crystallization of a DNA and *N*-acetylserine Binding Fragment (Residues 1 to 233) of *Klebsiella aerogenes* CysB Protein, a Member of the LysR Family, **235**, 1159–1161.
Crystallization of 31 kDa C-terminal Fragment of Rat DNA Polymerase β, **235**, 1342–1344.
Crystallization, Characterization and Preliminary Crystallographic Studies of Carbamate Kinase of *Streptococcus faecium*, **235**, 1345–1347.
Crystallization and Preliminary Diffraction Analysis of the Catalytic Domain of Xylanase Z from *Clostridium thermocellum*, **235**, 1348–1350.
Characterization, Crystallization and Preliminary X-ray Crystallographic Analysis of the Complex between Barley α-Amylase and the Bifunctional α-Amylase/Subtilisin Inhibitor from Barley Seeds, **236**, 368–371.
Crystallization and Preliminary X-ray Analysis of Protocatechuate 3,4-Dioxygenase from *Acinetobacter calcoaceticus*, **236**, 372–373.
Preliminary Crystallographic Study of Protocatechuate 3,4-Dioxygenase from *Brevibacterium fuscum*, **236**, 374–376.
Crystallization of Catechol-1,2 Dioxygenase from *Pseudomonas arvilla C-1*, **236**, 377–378.
Preliminary Crystallographic Analysis of Methane Mono-oxygenase Hydroxylase from *Methylosinus trichosporium* OB3b, **236**, 379–381.
Crystallization and Initial X-ray Crystallographic Characterization of Recombinant Bovine Inositol Polyphosphate 1-Phosphatase Produced in *Spodoptera frugiperda* Cells, **236**, 584–589.
Crystallization and Quaternary Structure Analysis of the NAD^+-dependent Leucine Dehydrogenase from *Bacillus sphaericus*, **236**, 663–665.
Purification, Characterization and Crystallization of *Acanthamoeba* Profilin Expressed in *Escherichia coli*, **236**, 950–952.
Crystallization and Preliminary X-ray Analysis of apo-S100β and S100β with Ca^{2+}, **236**, 953–957.
A Regular 1 : 1 Complex of Two Allosteric States in the Single Crystal of L-Lactate Dehydrogenase from *Bifidobacterium longum*, **236**, 958–959.
Crystallization and Preliminary X-ray Analysis of the Auto-inhibited Twitchin Kinase, **236**, 1259–1261.
Crystals of a Fragment of Influenza Haemagglutinin in the Low pH Induced Conformation, **236**, 1262–1265.
Crystallization and Preliminary X-ray Diffraction Studies of a Glutathione S-Transferase from the Australian Sheep Blowfly, *Lucilia cuprina*, **236**, 1407–1409.
Preliminary X-ray Diffraction Studies of Recombinant 19 kDa Human Fibroblast Collagenase, **236**, 1410–1412.

Crystallization and Preliminary X-ray Analysis of PepC, a Thiol Aminopeptidase from *Lactococcus lactis* Homologous to Bleomycin Hydrolase, **237**, 160–162.
Crystallization and Preliminary X-ray Studies of Cyclodextrin Glucanotransferase from Alkalophilic *Bacillus* sp. 1011, **237**, 163–164.
Preliminary Crystallographic Studies of the Ligand-binding Domain of the Thyroid Hormone Receptor Complexed with Triiodothyronine, **237**, 236–239.
Crystallization and Preliminary X-ray Analysis of *Candida albicans* Phosphomannose Isomerase, **237**, 349–350.
Single Crystals of a Type III Antifreeze Polypeptide from Ocean Pout, **237**, 351–352.
Crystallization of DNA Polymerase II from *Escherichia coli*, **238**, 120–122.
Crystals of the Cell-binding Module of Fibronectin Obtained from a Series of Recombinant Fragments Differing in Length, **238**, 123–127.
Crystallization and Preliminary X-ray Analysis of Phenol Hydroxylase from *Trichosporon cutaneum*, **238**, 128–130.
Crystallization and Preliminary X-ray Analysis of the Low Molecular Weight Phosphotyrosyl Protein Phosphatase from Bovine Heart, **238**, 281–283.
Crystallization and Preliminary Crystallographic Study of β-Momorcharin, **238**, 284–285.
Crystallization and Preliminary X-ray Diffraction Studies of Curculin. A New Type of Sweet Protein Having Taste-modifying Action, **238**, 286–287.
Crystallization and Preliminary Crystallographic Analysis of a DNA (Cytosine-5)-Methyltransferase from *Haemophilus aegyptius* Bound Covalently to DNA, **238**, 626–629.
Crystallization and Preliminary X-ray Analysis of Copper Amine Oxidase from *Escherichia coli* K-12, **238**, 635–637.
Characterization of Crystals of Satellite Panicum Mosaic Virus, **238**, 849–851.
Crystallization and Preliminary X-ray Crystallographic Studies of Recombinant Human Leukotriene A_4 Hydrolase Complexed with Bestatin, **238**, 854–856.
Crystallization and Preliminary X-ray Analysis of an Anti-Staphylococcal Nuclease–Staphylococcal Nuclease Complex and of a Second Anti-Staphylococcal Nuclease Antibody, **239**, 154–157.
Crystallization and Preliminary X-ray Diffraction Studies of Nitric Oxide Reductase Cytochrome P450nor from *Fusarium oxysporum*, **239**, 158–159.
Expression, Purification, Crystallization and Preliminary X-ray Analysis of Human Argininosuccinic Acid Lyase, **239**, 336–338.
Crystallization and Preliminary X-ray Diffraction Study of a Bacterially Produced T-cell Antigen Receptor Vα Domain, **239**, 339–341.
Crystallization and Preliminary X-ray Analysis of Human α-Galactosidase A Complex, **239**, 578–580.
Crystallization of Enzyme IIB of the Cellobiose-specific Phosphotransferase System of *Escherichia coli*, **239**, 588–590.
Crystallization and Preliminary X-ray Analysis of GAP 31. A Protein Which Inhibits the Life Cycle of HIV-1, **240**, 92–94.
Crystallization and Preliminary X-ray Diffraction Analysis of a Type I β-glucosidase Encoded by the *bgl A* Gene of *Bacillus polymyxa*, **240**, 267–270.
Crystallization and Low Temperature Diffraction Studies of the DNA Binding Domain of the Single-stranded DNA Binding Protein from *Escherichia coli*, **240**, 396–399.
Crystallization and Preliminary Characterization of Crystals of D-2-hydroxyisocaproate Dehydrogenase from *Lactobacillus casei*, **240**, 400–402.
Crystallization and Preliminary X-ray Diffraction Studies on a Soluble *Escherichia coli* Quinone Oxidoreductase, **240**, 501–503.
Crystallization and Preliminary X-ray Diffraction Studies of Xylose Isomerase from *Thermoanaerobacterium thermosulfurigenes* Strain 4B, **240**, 504–506.
Crystallization and Preliminary X-ray Analysis of a Trimeric Form of Human Mannose Binding Protein, **241**, 125–127.
Crystallization of Inhibitor Complexes of an N-terminal 24 kDa Fragment of the DNA Gyrase B Protein, **241**, 128–130.
Crystallization and Preliminary X-ray Diffraction Studies on Cytosolic (Class 1) Aldehyde Dehydrogenase from Sheep Liver, **241**, 263–264.
The Crystallization and Preliminary X-ray Analysis of Allosteric Chorismate Mutase, **241**, 273–274.
Crystallization of Histidyl-tRNA Synthetase from *Escherichia coli*, **241**, 275–277.
Crystallization and Preliminary X-ray Diffraction Studies of an Endoglucanase from *Aspergillus aculeatus*, **241**, 278–280.
Preliminary Crystallographic Study of *Escherichia coli* RuvC Protein. An Endonuclease Specific for Holliday Junctions, **241**, 281–282.
Complex between Bovine Ribonuclease A and Porcine Ribonuclease Inhibitor Crystallizes in a Similar Unit Cell as Free Ribonuclease Inhibitor, **241**, 288–291.
Crystallization and Preliminary X-ray Diffraction Studies on the Apo Form of Orotate Phosphoribosyltransferase from *Escherichia coli*, **241**, 292–294.
Crystallization and X-ray Diffraction Study of the *Streptomyces* K15 Penicillin-binding DD-Transpeptidase, **241**, 295–297.
Purification, Characterization and Crystallization of Human Platelet Profilin Expressed in *Escherichia coli*, **241**, 480–482.
Expression and Crystallization of a Soluble Form of *Drosophila* Fasciclin III, **241**, 483–487.
Crystallization of a Type II Dehydrogenase from *Mycobacterium tuberculosis*, **241**, 488–491.
Crystallization and Preliminary Crystallographic Analysis of Peptide-N^4-(*N*-acetyl-β-D-glucosaminyl)asparagine Amidase PNGase F, **241**, 622–623.
Purification and Crystallization of the Endoglycosidase PNGase F, a Peptide:*N*-glycosidase from *Flavobacterium meningosepticum*, **241**, 624–626.
Preliminary Crystallographic Analysis of a Fab Specific for P-glycoprotein With and Without Bound Peptide, **241**, 736–738.
Crystallization and Preliminary X-ray Diffraction Study of an Idiotope-Anti-Idiotope Fv-Fv Complex, **241**, 739–743.
Crystallization and Preliminary X-ray Investigation of Recombinant Simian Immunodeficiency Virus Matrix Protein, **241**, 744–746.
Crystallization and Preliminary Crystallographic Data for Acetohydroxy Acid Isomeroreductase from *Spinacia oleracea*, **242**, 578–581.
Crystallization and Preliminary X-ray Diffraction Studies of Human RANTES, **242**, 589–590.
Crystallization and Preliminary X-ray Diffraction Analysis of the ArsC Protein from the *Escherichia coli* Arsenical Resistance Plasmid, R773, **242**, 701–702.
Crystallization and Preliminary X-ray Analysis of the Two Domains of Glucosamine-6-phosphate Synthase from *Escherichia coli*, **242**, 703–705.
Crystallization and Preliminary X-ray Analysis of the Fab Fragment of a Human Monoclonal IgM Rheumatoid Factor (2A2), **242**, 706–708.
Crystallization of Mutant β Subunit of F_1-ATPase from Thermophilic *Bacillus* PS3, **242**, 709–711.
Crystallization and Preliminary X-ray Diffraction Studies on a Recombinant Isopenicillin N Synthase from *Cephalosporium acremonium*, **242**, 712–714.
Crystallization and Preliminary X-ray Diffraction Studies of the Enoyl-ACP Reductase from *Escherichia coli*, **243**, 126–127.

Crystallization and Preliminary X-ray Analysis of a New Crystal form of Nitrite Reductase from *Pseudomonas aeruginosa*, **243**, 347–350.
Crystallization and Preliminary X-ray Diffraction Study of the Nickel-binding Protein NikA of *Escherichia coli*, **243**, 353–355.
Crystallization and Molecular Packing Analysis of Barstar Crystals, **243**, 533–536.
The Characterization and Crystallization of a Virally Encoded *Ustilago maydis* KP4 Toxin, **243**, 792–795.
Preliminary X-ray Diffraction Analysis of Crystals of the P_{II} Protein from *Escherichia coli*, **243**, 796–798.
Preliminary Crystallographic Analysis of 4-Oxalocrotonate Tautomerase Reveals the Oligomeric Structure of the Enzyme, **243**, 799–801.
Crystallization and Preliminary X-ray Crystallographic Studies of Thermostable Xylanase Crystals Isolated from *Paecilomyces varioti*, **243**, 806–808.
Crystallization and Preliminary X-ray Analysis of a Mutant Duck δ II Crystallin, **243**, 944–946.
Crystallization and Preliminary X-ray Analysis of Recombinant 1-Aminocyclopropane-1-carboxylate Synthase from Apple. A Key Enzyme in the Biosynthesis of the Plant Hormone Ethylene, **243**, 947–949.
11-fold Symmetry of the *trp* RNA-binding Attenuation Protein (TRAP) from *Bacillus subtilis* Determined by X-ray Analysis, **244**, 1–5.
Crystallization of the Macromolecular Complex Transthyretin-Retinol-binding Protein, **244**, 110–113.
Crystallization and X-ray Crystallographic Analysis of Recombinant Chicken Poly (ADP-ribose) Polymerase Catalytic Domain Produced in Sf9 Insect Cells, **244**, 114–116.
Crystallization and Preliminary X-ray Analysis of the Major Cellulose-binding Domain of the Cellulosome from *Clostridium thermocellum*, **244**, 236–237.
New Crystal Forms and Preliminary X-ray Diffraction Studies of Mitochondrial Cytochrome bc_1 Complex from Bovine Heart, **244**, 238–241.
Crystallization and Preliminary Crystallographic Data for Rab Guanine Nucleotide Dissociation Inhibitor (RabGDI) from Bovine Brain, **244**, 469–473.
Purification, Crystallization and Preliminary X-ray Diffraction Studies of Alpha-Toxin of *Clostridium perfringens*, **244**, 648–650.
Crystallization and Preliminary X-ray Diffraction Studies on ADP-ribosylation Factor 1, **244**, 651–653.
Crystallization and Preliminary X-ray Studies of the Diphtheria *Tox* Repressor from *Corynebacterium diphtheriae*, **244**, 654–656.
Expression, Crystallization and Preliminary Crystallographic Analysis of Human Carbonyl Reductase, **244**, 659–664.

2-D crystallization
Three-dimensional Model of *Escherichia coli* Gyrase B Subunit Crystallized in Two-dimensions on Novobiocin-Linked Phospholipid Films, **236**, 618–628.

Crystallization from gel
Crystallization of Mitochondrial Cytochrome b-c_1 Complex from Gel With or Without Reduced Pressure, **243**, 802–805.

Crystallization under reduced pressure
Crystallization of Mitochondrial Cytochrome b-c_1 Complex from Gel With or Without Reduced Pressure, **243**, 802–805.

Crystallographic refinement
Analysis of the Single-stranded DNA Bacteriophage ϕX174, Refined at a Resolution of 3·0 Å, **237**, 517–543.
Simultaneous Refinement of the Structure of BPTI Against NMR Data Measured in Solution and X-ray Diffraction Data Measured in Single Crystals, **241**, 588–599.

Crystallography
see also Electron crystallography.
The 1·6 Å Structure of Histidine-containing Phosphotransfer Protein HPr from *Streptococcus faecalis*, **236**, 1341–1355.
Crystal Structures of Aconitase with *Trans*-aconitate and Nitrocitrate Bound, **237**, 437–451.
Three-dimensional Structure of Membrane-bound Annexin V. A Correlative Electron Microscopy-X-ray Crystallography Study, **238**, 199–213.
Preliminary Crystallographic Analysis of Manganese Peroxidase from *Phanerochaete chrysosporium*, **238**, 845–848.
Two Crystal Forms of the Extracellular Domain of Type I Tumor Necrosis Factor Receptor, **239**, 332–335.
Structures of Three Human β Alcohol Dehydrogenase Variants. Correlations with their Functional Differences, **239**, 415–429.
Structure Determination of an Fab Fragment that Neutralizes Human Rhinovirus 14 and Analysis of the Fab-Virus Complex, **240**, 127–137.
Crystallization of Proliferating Cell Nuclear Antigen (PCNA) from *Saccharomyces cerevisiae*, **241**, 265–268.
Crystallization and Preliminary X-ray Diffraction Studies of an Endoglucanase from *Aspergillus aculeatus*, **241**, 278–280.
Refined Crystal Structure of Porcine Class Pi Glutathione S-Transferase (pGST P1-1) at 2·1 Å Resolution, **243**, 72–92.
Crystallization of *Ulex europaeus* Lectin I, **243**, 345–346.

Crystals
Crystals of Glutamine-binding Protein in Various Conformational States, **240**, 87–91.
Diffraction Quality Crystals of Protein X from *Azotobacter vinelandii*, **241**, 620–621.
Crystals of HIV-1 Reverse Transcriptase Diffracting to 2·2 Å Resolution, **242**, 586–588.
The Third IgG-Binding Domain from Streptococcal Protein G. An Analysis by X-ray Crystallography of the Structure Alone and in a Complex with Fab, **243**, 906–918.

2-dimensional crystals
Three-dimensional Structure of Membrane-bound Annexin V. A Correlative Electron Microscopy-X-ray Crystallography Study, **238**, 199–213.
Electron Cryomicroscopy of *Bacillus stearothermophilus* 50 S Ribosomal Subunits Crystallized on Phospholipid Monolayers, **239**, 689–697.

Cucumber green mottle mosaic virus
Structure Determination of Cucumber Green Mottle Mosaic Virus by X-ray Fiber Diffraction. Significance for the Evolution of Tobamoviruses, **239**, 371–384.

Cucumber mosaic virus
Requirement of 3′-Terminal Guanosine in (−)-Stranded RNA for *in vitro* Replication of Cucumber Mosaic Virus Satellite RNA by Viral RNA-dependent RNA Polymerase, **238**, 655–657.

Curculin
Crystallization and Preliminary X-ray Diffraction Studies of Curculin. A New Type of Sweet Protein Having Taste-modifying Action, **238**, 286.

Cyanobacteria
Heterocyst-forming Filamentous Cyanobacteria Encode Proteins that Resemble Eukaryotic RNA-binding Proteins of the RNP Family, **235**, 1162–1170.

Cyclic AMP receptor protein
Asymmetric Arrangement of Two Alpha Subunits within *Escherichia coli* RNA Polymerase. Involvement of One Alpha Subunit in Contact with cAMP Receptor Protein, **236**, 1283–1288.
Transcription Activation by the *Escherichia coli* Cyclic AMP Receptor Protein. Receptors Bound in Tandem at Promoters Can Interact Synergistically, **241**, 341–352.
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP) I. Saturation and Alanine-scanning Mutagenesis, **243**, 595–602.

Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP). II. Role at Class I and Class II CAP-dependent Promoters, **243**, 603–610.

Cyclization
Sequence Elements Responsible for DNA Curvature, **244**, 135–143.

Cyclodextrin glucanotransferase
Crystallization and Preliminary X-ray Studies of Cyclodextrin Glucanotransferase from Alkalophilic *Bacillus* sp. 1011, **237**, 163–164.

Cyclodextrin glycosyltransferase
Nucleotide Sequence and X-ray Structure of Cyclodextrin Glycosyltransferase from *Bacillus circulans* Strain 251 in a Maltose-dependent Crystal Form, **236**, 590–600.

Cyclophilin
Preliminary Analysis of Multiple Crystal Forms of the Bovine Cyclophilin–Cyclosporin A Complex, **235**, 1136–1140.
The Molecular Replacement Solution and X-ray Refinement to 2·8 Å of a Decameric Complex of Human Cyclophilin A with the Immunosuppressive Drug Cyclosporin A, **244**, 385–409.

Cyclosporin A
Preliminary Analysis of Multiple Crystal Forms of the Bovine Cyclophilin Cyclosporin A Complex, **235**, 1136–1140.
The Molecular Replacement Solution and X-ray Refinement to 2·8 Å of a Decameric Complex of Human Cyclophilin A with the Immunosuppressive Drug Cyclosporin A, **244**, 385–409.

CysB
Crystallization of a DNA and *N*-acetylserine Binding Fragment (Residues 1 to 233) of *Klebsiella aerogenes* CysB Protein, a Member of the LysR Family, **235**, 1159–1161.

Cytidine deaminase
Cytidine Deaminase. The 2·3 Å Crystal Structure of an Enzyme:Transition-state Analog Complex, **235**, 635–656.

Cytochrome bc_1 complex
Crystallization of Mitochondrial Cytochrome *b-c* $_1$ Complex from Gel With or Without Reduced Pressure, **243**, 802–805.
New Crystal Forms and Preliminary X-ray Diffraction Studies of Mitochondrial Cytochrome bc_1 Complex from Bovine Heart, **244**, 238–241.

Cytochrome *c*
Mutation of Tyrosine-67 to Phenylalanine in Cytochrome *c* Significantly Alters the Local Heme Environment, **235**, 1326–1341.
The Role of a Conserved Internal Water Molecule and Its Associated Hydrogen Bond Network in Cytochrome *c*, **236**, 786–799.
Electron Microscopy of Cytochrome *c* Oxidase Crystals. Monomer–Dimer Relationship and Cytochrome *c* Binding Site, **237**, 275–297.
Comparison of the Conformational Stability of the Molten Globule and Native States of Horse Cytochrome *c*. Effects of Acetylation, Heat, Urea and Guanidine-Hydrochloride, **237**, 336–348.

Cytochrome c_3
Crystal Structure of Cytochrome c_3 from *Desulfovibrio desulfuricans* Norway at 1·7 Å Resolution, **243**, 653–667.

Cytochrome *c* oxidase
Expression of Mitochondrial Genes in the Germinating Conidia of *Neurospora crassa*, **235**, 881–897.
Electron Microscopy of Cytochrome *c* Oxidase Crystals. Monomer–Dimer Relationship and Cytochrome *c* Binding Site, **237**, 275–297.

Cytochrome *c* peroxidases
Crystal Structure of the Fungal Peroxidase from *Arthromyces ramosus* at 1·9 Å Resolution. Structural Comparisons with the Lignin and Cytochrome *c* Peroxidases, **235**, 331–344.

Cytochrome oxidase assembly
OXA1, a *Saccharomyces cerevisiae* Nuclear Gene whose Sequence is Conserved from Prokaryotes to Eukaryotes Controls Cytochrome Oxidase Biogenesis, **239**, 201–212.

Cytochrome P450
Crystal Structure and Refinement of Cytochrome $P450_{terp}$ at 2·3 Å Resolution, **236**, 1169–1185.
Crystallization and Preliminary X-ray Diffraction Studies of Nitric Oxide Reductase Cytochrome P450nor from *Fusarium oxysporum*, **239**, 158–159.

Cytokeratins
Selection of Phage-displayed Antibodies Specific for a Cytoskeletal Antigen by Competitive Elution with a Monoclonal Antibody, **244**, 353–360.

Cytokine
Analysis of the Solution Structure of Human Interleukin-4 Determined by Heteronuclear Three-dimensional Nuclear Magnetic Resonance Techniques, **238**, 23–41.

Cytoplasmic streaming
A Myosin from a Higher Plant has Structural Similarities to Class V Myosins, **239**, 591–597.

Cytosine deamination
Unusual Kinetics of Uracil Formation in Single and Double-stranded DNA by Deamination of Cytosine in Cyclobutane Pyrimidine Dimers, **235**, 807–812.

Cytosine methylation
Perpetuation of Cytosine Methylation in *Ascobolus immersus* Implies a Novel Type of Maintenance Methylase, **240**, 42–51.

Cytoskeleton
Identification of a Divergent Actin-related Protein in *Drosophila*, **235**, 1351–1356.
Purification, Characterization and Crystallization of *Acanthamoeba* Profilin Expressed in *Escherichia coli*, **236**, 950–952.
Purification, Characterization and Crystallization of Human Platelet Profilin Expressed in *Escherichia coli*, **241**, 480–482.

Cytotoxin
X-ray Structure at 1·55 Å of Toxin γ, a Cardiotoxin from *Naja nigricollis* Venom. Crystal Packing Reveals a Model for Insertion into Membranes, **239**, 122–136.

Dark-field electron microscopy
Conformational Analysis of a 139 Base-pair DNA Fragment Containing a Single-stranded Break and Its Interaction with Human Poly(ADP-ribose) Polymerase, **235**, 1062–1071.

Database
Prediction of Protein Side-chain Conformations from Local Three-dimensional Homology Relationships, **235**, 1088–1097.
Adenine·Methylthymine Base-pairs Enhance Non-uniformity in DNA Helices, **239**, 37–51.
Identification of High Affinity Binding Sites for LexA which Define New DNA Damage-inducible Genes in *Escherichia coli*, **241**, 507–523.
Position-based Sequence Weights, **243**, 574–578.

***De novo* protein design**
Solution Structure of a *de Novo* Helical Protein by 2D-NMR Spectroscopy, **236**, 862–868.

***De novo* protein ligand (design of)**
The Use of Composite Crystal-field Environments in Molecular Recognition and the *de Novo* Design of Protein Ligands, **237**, 212–235.

De novo structure prediction
Prediction of the Folding Pathways and Structure of the GCN4 Leucine Zipper, **237**, 361–367.

Deacylation mechanism
A Crystallographic Re-investigation into the Structure of *Streptomyces griseus* Proteinase A Reveals an Acyl-enzyme Intermediate, **241**, 574–587.

Decoding site
Mutations in Helix 34 of *Escherichia coli* 16 S Ribosomal RNA Have Multiple Effects on Ribosome Function and Synthesis, **243**, 402–412.

Dehalogenases
Computer Analysis of Bacterial Haloacid Dehalogenases Defines a Large Superfamily of Hydrolases with Diverse Specificity. Application of an Iterative Approach to Database Search, **244**, 125–132.

Dehydrogenase
Structures of Three Human β Alcohol Dehydrogenase Variants. Correlations with their Functional Differences, **239**, 415–429.
Crystallization of a Type II Dehydrogenase from *Mycobacterium tuberculosis*, **241**, 488–491.

Deletion mapping
Identification of Recognition Elements on Bacteriophage Qβ Minus Strand RNA that are Essential for Template Activity with Qβ Replicase, **243**, 811–815.

Deletions
Deletion Analysis of the Lambda tR1 Termination Region. Effect of Sequences near the Transcript Release Sites, and the Minimum Length of Rho-dependent Transcripts, **237**, 255–265.
Functional Map of the Alpha Subunit of *Escherichia coli* RNA Polymerase. Deletion Analysis of the Amino-terminal Assembly Domain, **242**, 107–115.

Delta
The δ Subunit of *Bacillus subtilis* RNA Polymerase. An Allosteric Effector of the Initiation and Core-recycling Phases of Transcription, **239**, 1–14.

Denaturation
Structural Characterization of the FK506 Binding Protein Unfolded in Urea and Guanidine Hydrochloride, **236**, 637–648.
Amide Hydrogen Exchange in a Highly Denatured State. Hen Egg-white Lysozyme in Urea, **237**, 247–254.
Comparison of the Conformational Stability of the Molten Globule and Native States of Horse Cytochrome *c*. Effects of Acetylation, Heat, Urea and Guanidine-Hydrochloride, **237**, 336–348.
Pressure and Propylene Carbonate Denaturation of Native and "Aged" Phosphorylated Cholinesterase, **238**, 466–478.

Densitometry
Stability against Denaturation Mechanisms in Halophilic Malate Dehydrogenase Adapt to Solvent Conditions, **244**, 436–447.

Deoxyribonuclease I _see_ DNase I

Dermis
Collagen Fibril Structure in Lamprey, **243**, 38–47.

Desulfovibrio
Crystal Structure of Cytochrome c_3 from *Desulfovibrio desulfuricans* Norway at 1·7 Å Resolution, **243**, 653–667.

Detergent treatment
The Organization of the Spike Complex of Semliki Forest Virus, **236**, 572–583.
Export and Trimerization Pathways of Maltoporin Overlap in the Inner Membrane of *Escherichia coli*, **238**, 555–562.

Dethiobiotin synthetase
Sequence and Crystallization of *Escherichia coli* Dethiobiotin Synthetase, the Penultimate Enzyme of Biotin Biosynthesis, **235**, 774–776.

Detoxification
Crystallization and Preliminary X-ray Diffraction Studies of a Glutathione S-Transferase from the Australian Sheep Blowfly, *Lucilia cuprina*, **236**, 1407–1409.
Crystal Structure of Human Class mu Glutathione Transferase GSTM2-2. Effects of Lattice Packing on Conformational Heterogeneity, **238**, 815–832.
Refined Crystal Structure of Porcine Class Pi Glutathione S-Transferase (pGST P1-1) at 2·1 Å Resolution, **243**, 72–92.

Dewar isomer
Accuracy of Replication Past the T-C (6-4) Adduct, **235**, 465–471.

***cis*-diamminedichloroplatinum II**
Effect of Single DNA Lesions on *in Vitro* Replication with DNA Polymerase III Holoenzyme. Comparison with other Polymerases, **236**, 151–164.
Effects of DNA Adduct Structure and Distribution on the Mutagenicity and Genotoxicity of Two Platinum Anticancer Drugs, **236**, 1034–1048.

***cis*-Diamminedichloroplatinum(II)-modified DNA**
DNase I Footprinting of *cis*-or *trans*-Diamminedichloroplatinum(II)-modified DNA, **236**, 969–974.

***trans*-Diamminedichloroplatinum(II)-modified DNA**
DNase I Footprinting of *cis*-or *trans*-Diamminedichloroplatinum(II)-modified DNA, **236**, 969–974.

Dictyostelium discoideum
Refined X-ray Structure of *Dictyostelium discoideum* Nucleoside Diphosphate Kinase at 1·8 Å Resolution, **243**, 873–890.

Dielectric saturation
Improved Continuum Electrostatic Modelling in Proteins, with Comparison to Experiment, **236**, 887–903.

Differential cross polarization
A Unique Protonated Phosphate Group in Bone Mineral Not Present in Synthetic Calcium Phosphates. Identification by Phosphorous-31 Solid State NMR Spectroscopy, **244**, 423–435.

Differential scanning calorimetry
Bacteriophage T7 RNA Polymerase and Its Active-site Mutants. Kinetic, Spectroscopic and Calorimetric Characterization, **237**, 5–19.

Diffraction
Crystallographic Characterization and Molecular Symmetry of Edestin, a Legumin from Hemp, **235**, 361–363.

Dihydrofolate reductase
Volume Changes in Protein Evolution, **236**, 1067–1078.

Diiodomethane
The Specific Binding Site of the Volatile Anesthetic Diiodomethane to Purple Membrane by X-ray Diffraction, **238**, 297–301.

Dimer
The Solution Structure of the Tyr41→His Mutant of the Single-stranded DNA Binding Protein Encoded by Gene V of the Filamentous Bacteriophage M13, **236**, 229–246.
Linking an Easily Detectable Phenotype to the Folding of a Common Structural Motif. Selection of Rare Turn Mutations that Prevent the Folding of Rop, **237**, 378–387.
Nerve Growth Factor in Different Crystal Forms Displays Structural Flexibility and Reveals Zinc Binding Sites, **239**, 385–400.
Analytical Study of Rat Retrotransposon VL30 RNA Dimerization *in Vitro* and Packaging in Murine Leukemia Virus, **240**, 434–444.

Dimeric enzyme
Thermal Stabilization of Thymidylate Synthase by Engineering Two Disulfide Bridges Across the Dimer Interface, **235**, 89–94.

Dimerization
The Modular Architecture of Bacterial Response Regulators. Insights into the Activation Mechanism of the BvgA Transactivator of *Bordetella pertussis*, **241**, 363–377.

N^6,N^6-Dimethyladenosine
The *DIM1* Gene Responsible for the Conserved $m^6{}_2Am^6{}_2A$ Dimethylation in the 3′-Terminal Loop of 18 S rRNA is Essential in Yeast, **241**, 492–497.

DINOSAUR
Nuclear Magnetic Resonance Solution Structure of the Arc Repressor Using Relaxation Matrix Calculations, **236**, 328–341.

Dioxygenase
Preliminary Crystallographic Study of Protocatechuate 3,4-Dioxygenase from *Brevibacterium fuscum*, **236**, 374–376.
Crystallization of Catechol-1,2 Dioxygenase from *Pseudomonas arvilla C-1*, **236**, 377–378.
Structure of Protocatechuate 3,4-Dioxygenase from *Pseudomonas aeruginosa* at 2·15 Å Resolution, **244**, 586–608.

Diphtheria toxin
Crystallization and Preliminary X-ray Studies of the Diphtheria *Tox* Repressor from *Corynebacterium diphtheriae*, **244**, 654–656.

Dipole moments
Characterization of Multiple Oligometric Vimentin Intermediate Filament Units by Transient Electric Birefringence Measurements, **236**, 1241 1249.

Discriminant analysis
Discrimination of Intracellular and Extracellular Proteins Using Amino Acid Composition and Residue-pair Frequencies, **238**, 54–61.

Displayed peptides *see* Peptide display

Distamycin
A DNA Minor Groove-binding Ligand Both Potentiates and Arrests Transcription by RNA Polymerase II. Elongation Factor SII Enables Readthrough at Arrest Sites, **236**, 725–737.

Distance geometry
Determination of the Nuclear Magnetic Resonance Structure of the DNA-binding Domain of the *P22 c2* Repressor (1 to 76) in Solution and Comparison with the DNA-binding Domain of the *434* Repressor, **235**, 1003–1020.
Cardiotoxin III from the Taiwan Cobra (*Naja naja atra*). Determination of Structure in Solution and Comparison with Short Neurotoxins, **235**, 1291–1301.
Solution Structure of a *de Novo* Helical Protein by 2D-NMR Spectroscopy, **236**, 862–868.
Tertiary Structure of Erabutoxin b in Aqueous Solution as Elucidated by Two-dimensional Nuclear Magnetic Resonance, **240**, 155–166.
Structure of Cobra Cardiotoxin CTXI as Derived from Nuclear Magnetic Resonance Spectroscopy and Distance Geometry Calculations, **240**, 445–458.
Homology Modeling of Divergent Proteins, **241**, 143–149.
Does Compactness Induce Secondary Structure in Proteins? A Study of Poly-alanine Chains Computed by Distance Geometry, **241**, 557–573.

Disulfide bond
Erythrina caffra Trypsin Inhibitor Retains Its Native Structure and Function After Reducing Its Disulfide Bonds, **239**, 276–284.
Intact Disulfide Bonds Decelerate the Folding of Ribonuclease T1, **239**, 713–725.

Disulfide bonds
^{1}H NMR Analysis of the Partly-folded Non-native Two-disulphide Intermediates (30-51,5-14) and (30-51,5-38) in the Folding Pathway of Bovine Pancreatic Trypsin Inhibitor, **235**, 1044–1061.
Analysis and Classification of Disulphide Connectivity in Proteins. The Entropic Effect of Cross-linkage, **244**, 448–463.

Disulfide bridge
Arabidopsis thaliana NAPHP Thioredoxin Reductase. cDNA Characterization and Expression of the Recombinant Protein in *Escherichia coli*, **235**, 1357–1363.

Disulfide knot
Nerve Growth Factor in Different Crystal Forms Displays Structural Flexibility and Reveals Zinc Binding Sites, **239**, 385–400.

Disulfide oxidoreductase, flavin
Crystal Structure of *Escherichia coli* Thioredoxin Reductase Refined at 2 Å Resolution. Implications for a Large Conformational Change during Catalysis, **236**, 800–816.

Divalent metals
Physiological Concentration of Magnesium Ions Induces a Strong Macroscopic Curvature in GGGCCC-containing DNA, **236**, 26–32.

DNA
Physiological Concentration of Magnesium Ions Induces a Strong Macroscopic Curvature in GGGCCC-containing DNA, **236**, 26–32.
Enrichment of Human DNAs that Flank Poly(dA)·poly(dT) Tracts by Triplex DNA Formation, **237**, 193 200.
Salt Effects on Ligand–DNA Binding. Minor Groove Binding Antibiotics, **238**, 245–263.
Salt Effects on Protein–DNA Interactions. The λcI Repressor and *Eco*RI Endonuclease, **238**, 264–280.
Hydrogen Exchange Dynamics of the P22 Virion Determined by Time-resolved Raman Spectroscopy. Effects of Chromosome Packaging on the Kinetics of Nucleotide Exchanges, **241**, 68–82.
The Solution Structure of the r(gcg)d(TA-TACCC):d(GGGTATACGC) Okazaki Fragment Contains Two Distinct Duplex Morphologies Connected by a Junction, **241**, 440–455.
Solution Structure and Hydration Patterns of a Pyrimidine·Purine·Pyrimidine DNA Triplex Containing a Novel T·CG Base-triple, **241**, 600–619.
Quantification of the Effect of Excluded Volume on Double-stranded DNA, **242**, 547–558.
Unwound Regions in Yeast Centromere IV DNA, **243**, 179–189.
Recombination-like Structure of d(CCGCGG), **243**, 484–493.
Thymine Starvation-induced Structural Changes in *Escherichia coli* DNA. Detection by Pulsed Field Gel Electrophoresis and Evidence for Involvement of Homologous Recombination, **243**, 611–620.

5S DNA
Relative Contributions of the Zinc Fingers of Transcription Factor IIIA to the Energetics of DNA Binding, **244**, 23–35.

***B*-DNA**
The Crystal Structure of C-C-A-T-T-A-A-T-G-G. Implications for Bending of *B*-DNA at T-A Steps, **239**, 79 96.

DNA bending
Periodicity of Dinucleotides in Nucleosomes Derived from Simian Virus 40 Chromatin, **235**, 198–208.
The Structure of the RNA Polymerase-Promoter Complex. DNA-bending-angle by Quantitative Electrooptics, **236**, 1–6.
Multiple DNA Conformational Changes Induced by an Initiator Protein Precede the Nicking Reaction in a Rolling Circle Replication Origin, **237**, 388–400.
Sequence Elements Responsible for DNA Curvature, **244**, 135–143.

DNA binding
Cooperative DNA-Protein Interactions. Effects of Changing the Spacing Between Adjacent Binding Sites, **235**, 532–544.
Mapping the Functional Domains of Bacteriophage Lambda Integrase Protein, **235**, 908–925.

Requirement for an A-tract Structure at the Binding Site of Phage ϕ29 Transcriptional Activator, **237**, 175–181.
Salt Effects on Ligand–DNA Binding. Minor Groove Binding Antibiotics, **238**, 245–263.
Salt Effects on Protein–DNA Interactions. The λcI Repressor and *Eco*RI Endonuclease, **238**, 264–280.
Interstitial Telomeric Repeats within the *Arabidopsis thaliana* Genome, **239**, 163–169.
Complex Formation between Phage ϕ29 Single-stranded DNA Binding Protein and DNA, **239**, 213–226.
The Major Dimerization Determinants of the Nitrogen Regulatory Protein NTRC from Enteric Bacteria Lie in Its Carboxy-terminal Domain, **241**, 233–245.
DNA-binding Parameters of the HU Protein of *Escherichia coli* to Cruciform DNA, **242**, 116–129.
Phosphorylation of the C-terminal Domain of Yeast Topoisomerase II by Casein Kinase II Affects DNA-Protein Interaction, **243**, 10–24.
Purification and DNA-Binding Activity of the PacA Subunit of the Bacteriophage P1 Pacase Enzyme, **243**, 258–267.
Crystallization and Preliminary X-ray Studies of the Diphtheria *Tox* Repressor from *Corynebacterium diphtheriae*, **244**, 654–656.

DNA binding affinity
Analysis of the DNA-binding Affinity, Sequence Specificity and Context Dependence of the Glucocorticoid Receptor Zinc Finger Region, **239**, 664–688.

DNA binding domain
A Functional Analysis of the Tn*5* Transposase. Identification of Domains Required for DNA Binding and Multimerization, **241**, 166–177.
Gene Activation by the *Escherichia coli* Positive Regulator, OmpR. Phosphorylation-independent Mechanism of Activation by an OmpR Mutant, **242**, 607–613.

DNA binding protein
Crystallization and X-ray Studies of the DNA-binding Domain of OmpR Protein, a Positive Regulator Involved in Activation of Osmoregularity Genes in *Escherichia coli*, **235**, 780–782.
Determination of the Nuclear Magnetic Resonance Structure of the DNA-binding Domain of the *P22 c2* Repressor (1 to 76) in Solution and Comparison with the DNA-binding Domain of the *434* Repressor, **235**, 1003–1020.
In Vivo Characterization of Mutants of the Bacteriophage f1 Gene V Protein Isolated by Saturation Mutagenesis, **236**, 556–571.
Structural Specificity of Peptides in *Z*-DNA Formation and Energetics of the Peptide-induced *B–Z* Transition of Poly(dG-m^{5}dC), **236**, 610–617.
Ligand-induced Self-association of the *Escherichia coli* Regulatory Protein TyrR, **238**, 309–318.
Crystallization and Preliminary X-ray Analysis of Restriction Endonuclease *Bam*HI–DNA Complex, **239**, 430–432.
Regulation of the Transcription of a Cluster of *Bacillus subtilis* Spore Coat Genes, **240**, 405–415.
Interactions of Wild-type and Truncated LevR of *Bacillus subtilis* with the Upstream Activating Sequence of the Levanase Operon, **241**, 178–192.
DNA-Dependent Renaturation of an Insoluble DNA Binding Protein. Identification of the RhaS Binding Site at *rhaBAD*, **243**, 821–829.
Relative Contributions of the Zinc Fingers of Transcription Factor IIIA to the Energetics of DNA Binding, **244**, 23–35.

DNA catenanes
Holliday Junction Crossover Topology, **236**, 91–105.

DNA curvature
Physiological Concentration of Magnesium Ions Induces a Strong Macroscopic Curvature in GGGCCC-containing DNA, **236**, 26–32.
Correlation between DNA Bending and Transcriptional Activation at a Plasmid Promoter, **241**, 7–17.

DNA damage
Oxygen Radical Induced Mutagenesis is DNA Polymerase Specific, **235**, 33–41.
DNA Damage-inducible Replication of the *Escherichia coli* Chromosome is Initiated at Separable Sites within the Minimal *oriC*, **235**, 1459–1469.
Pyrimidine Ring Fragmentation Products. Effects of Lesion Structure and Sequence Context on Mutagenesis, **236**, 514–530.

DNA double crossover molecules
Symmetric Holliday Junction Crossover Isomers, **238**, 658–668.

DNA double-strand breaks
DNA Double-strand Break *in vivo* at the 3′ Extremity of Exons Located Upstream of Group II Introns. Senescence and Circular DNA Introns in *Podospora* Mitochondria, **242**, 630–643.
Single Base-Pair Deletions Induced by Bleomycin at Potential Double-strand Cleavage Sites in the *aprt* Gene of Stationary Phase Chinese Hamster Ovary D422 Cells, **243**, 216–226.

DNA flexibility
Conformational Analysis of a 139 Base-pair DNA Fragment Containing a Single-stranded Break and Its Interaction with Human Poly(ADP-ribose) Polymerase, **235**, 1062–1071.

DNA fragmentation
Chromosome End Formation and Internal Sequence Elimination as Alternative Genomic Rearrangements in the Ciliate *Paramecium*, **236**, 421–426.

DNA Gyrase
Three-dimensional Model of *Escherichia coli* Gyrase B Subunit Crystallized in Two-dimensions on Novobiocin-Linked Phospholipid Films, **236**, 618–628.

DNA gyrase
Crystallization of Inhibitor Complexes of an N-terminal 24 kDa Fragment of the DNA Gyrase B Protein, **241**, 128–130.

DNA helical repeat
Nucleosome Structural Changes Due to Acetylation, **236**, 685–690.

DNA helicase
Dominant Negative Allele of the *Escherichia coli uvrD* Gene Encoding DNA Helicase II. A Biochemical and Genetic Characterization, **235**, 424–435.
Kinetic Parameters of the Translocation of Bacteriophage T4 Gene 41 Protein Helicase on Single-stranded DNA, **235**, 1447–1458.
Analysis of *Cis* and *Trans* Acting Elements Required for the Initiation of DNA Replication in the *Bacillus subtilis* Bacteriophage SPP1, **236**, 1324–1340.
Helicase Motifs V and VI of the *Escherichia coli* UvrB Protein of the UvrABC Endonuclease are Essential for the Formation of the Preincision Complex, **240**, 294–307.
Hexameric Rings of *Escherichia coli* RuvB Protein: Cooperative Assembly, Processivity and ATPase Activity, **243**, 208–215.

DNA hydration
Comparative Studies of High Resolution *Z*-DNA Crystal Structures. Part 1: Common Hydration Patterns of Alternating dC-dG, **236**, 1154–1168.

DNA intron circles
DNA Double-strand Break *in vivo* at the 3′ Extremity of Exons Located Upstream of Group II Introns. Senescence and Circular DNA Introns in *Podospora* Mitochondria, **242**, 630–643.

DNA linking number
Use of an Inducible Site-specific Recombinase to Probe the Structure of Protein–DNA Complexes Involved in F Plasmid Partition in *Escherichia coli*, **236**, 679–684.

DNA methylation
Structural Specificity of Peptides in *Z*-DNA Formation and Energetics of the Peptide-induced *B–Z* Transition of Poly(dG-m^{5}dC), **236**, 610–617.
The Domains of a Type I DNA Methyltransferase. Interactions and Role in Recognition of DNA Methylation, **236**, 1011–1021.
Crystallization and Preliminary Crystallographic Analysis of a DNA (Cytosine-5)-Methyltransferase from *Haemophilus aegyptius* Bound Covalently to DNA, **238**, 626–629.
Hypermethylation of Telomere-like Foldbacks at Codon 12 of the Human c-Ha-*ras* Gene and the Trinucleotide Repeat of the *FMR-1* Gene of Fragile X, **243**, 143–151.

DNA methyltransferase
see also Methyltransferase.
A *Caulobacter* DNA Methyltransferase that Functions only in the Predivisional Cell, **235**, 472–485.
Crystallization and Preliminary Crystallographic Analysis of a DNA (Cytosine-5)-Methyltransferase from *Haemophilus aegyptius* Bound Covalently to DNA, **238**, 626–629.
Interaction of *EcoP15I* DNA Methyltransferase with Oligonucleotides Containing the Asymmetric Sequence 5′-CAGCAG-3′, **242**, 378–388.

DNA oligomerization
DNA-Protein Cooperativity in the Assembly and Stabilization of Mu Strand Transfer Complex. Relevance of DNA Phasing and *att* Site Cleavage, **238**, 514 527.

DNA packaging
Quantification of the Effect of Excluded Volume on Double-stranded DNA, **242**, 547–558.
Purification and DNA-Binding Activity of the PacA Subunit of the Bacteriophage P1 Pacase Enzyme, **243**, 258–267.
Faithful Cleavage of the P1 Packaging Site (*pac*) Requires Two Phage Proteins, PacA and PacB, and Two *Escherichia coli* Proteins, IHF and HU, **243**, 268 282.

DNA packaging protein gpl9
Analysis of Functional Domains of the Packaging Proteins of Bacteriophage T3 by Site-directed Mutagenesis, **235**, 248–259.

DNA polymerase
Oxygen Radical Induced Mutagenesis is DNA Polymerase Specific, **235**, 33–41.
Effect of Single DNA Lesions on *in Vitro* Replication with DNA Polymerase III Holoenzyme. Comparison with other Polymerases, **236**, 151–164.
Crystallization of DNA Polymerase II from *Escherichia coli*, **238**, 120–122.
Production of UV-induced Frameshift Mutations *in Vitro* by DNA Polymerases Deficient in 3′→5′ Exonuclease Activity, **240**, 226–242.
Crystallization of Proliferating Cell Nuclear Antigen (PCNA) from *Saccharomyces cerevisiae*, **241**, 265–268.

DNA polymerase β
Crystallization of 31 kDa C-terminal Fragment of Rat DNA Polymerase β, **235**, 1342–1344.
Characterization of the Tryptophan Fluorescence and Hydrodynamic Properties of Rat DNA Polymerase β, **244**, 224–235.

DNA polymerase I
Molecular Modeling of RNA Polymerase II Mutations onto DNA Polymerase I, **244**, 13–22.

DNA protein complexes
Interrelations of Secondary Structure Stability and DNA-binding Affinity in the Bacteriophage SPO1-encoded Type II DNA-binding Protein TF1, **236**, 139–150.

DNA protein complexes *see* DNA-protein interactions

DNA rearrangement
Chromosome End Formation and Internal Sequence Elimination as Alternative Genomic Rearrangements in the Ciliate *Paramecium*, **236**, 421–426.
Intramolecular and Intermolecular DNA Ligation Mediated by Topoisomerase II, **241**, 18–25.
DNA Rearrangement of the Shufflon Determines Recipient Specificity in Liquid Mating of IncI1 Plasmid R64, **243**, 6–9.

DNA recognition
Conformational Analysis of a 139 Base-pair DNA Fragment Containing a Single-stranded Break and Its Interaction with Human Poly(ADP-ribose) Polymerase, **235**, 1062–1071.
A Parallel DNA Triplex as a Model for the Intermediate in Homologous Recombination, **239**, 181–200.

DNA recombination
A Novel Site-specific Recombinase Encoded by the *Streptococcus pyogenes* Plasmid pSM19035, **238**, 159–172.

DNA renaturation
Purification and Characterization of the *Escherichia coli* RecO Protein. Renaturation of Complementary Single-stranded DNA Molecules Catalyzed by the RecO Protein, **236**, 124–138.

DNA repair
High Resolution Mapping of UV-induced Photoproducts in the *Escherichia coli lacI* Gene. Inefficient Repair of the Non-transcribed Strand Correlates with High Mutation Frequency, **238**, 319–332.
Helicase Motifs V and VI of the *Escherichia coli* UvrB Protein of the UvrABC Endonuclease are Essential for the Formation of the Preincision Complex, **240**, 294 307.
Identification of High Affinity Binding Sites for LexA which Define New DNA Damage-inducible Genes in *Escherichia coli*, **241**, 507–523.
Hexameric Rings of *Escherichia coli* RuvB Protein: Cooperative Assembly, Processivity and ATPase Activity, **243**, 208–215.
Single Base-Pair Deletions Induced by Bleomycin at Potential Double-strand Cleavage Sites in the *aprt* Gene of Stationary Phase Chinese Hamster Ovary D422 Cells, **243**, 216–226.
Crystallization and X-ray Crystallographic Analysis of Recombinant Chicken Poly (ADP-ribose) Polymerase Catalytic Domain Produced in Sf9 Insect Cells, **244**, 114 116.

DNA repeats
see also Repetitive DNA.
Perpetuation of Cytosine Methylation in *Ascobolus immersus* Implies a Novel Type of Maintenance Methylase, **240**, 42 -51.
The Unusual Structure of the Human Centromere $(GGA)_2$ Motif. Unpaired Guanosine Residues Stacked Between Sheared G·A Pairs, **244**, 259–268.

DNA replication
see also Replication.
Kinetic Parameters of the Translocation of Bacteriophage T4 Gene 41 Protein Helicase on Single-stranded DNA, **235**, 1447–1458.
DNA Damage-inducible Replication of the *Escherichia coli* Chromosome is Initiated at Separable Sites within the Minimal *oriC*, **235**, 1459–1469.
Multiple DNA Conformational Changes Induced by an Initiator Protein Precede the Nicking Reaction in a Rolling Circle Replication Origin, **237**, 388–400.
Complete Nucleotide Sequence of Birmingham IncPα Plasmids. Compilation and Comparative Analysis, **239**, 623–663.
Crystallization of Proliferating Cell Nuclear Antigen (PCNA) from *Saccharomyces cerevisiae*, **241**, 265–268.
The Solution Structure of the r(gcg)d(TATACCC):d(GGGTATACGC) Okazaki Fragment Contains Two Distinct Duplex Morphologies Connected by a Junction, **241**, 440–455.

DNA restriction and modification
The *Escherichia coli prr* Region Encodes a Functional Type IC DNA Restriction System Closely Integrated with an Anticodon Nuclease Gene, **237**, 266–274.

DNA structure
Sequence Dependence of DNA Structure in Solution, **235**, 325–330.
The Twist, Writhe and Overall Shape of Supercoiled DNA Change During Counterion-induced Transition from a Loosely to a Tightly Interwound Superhelix. Possible Implications for DNA Structure *in Vivo*, **235**, 825–847.
Three-dimensional Solution Structure of the Thrombin-binding DNA Aptamer d(GGTTGGTGTGGTTGG), **235**, 1532–1547.
Physiological Concentration of Magnesium Ions Induces a Strong Macroscopic Curvature in GGGCCC-containing DNA, **236**, 26–32.
Structure of Four-way DNA Junctions containing a Nick in One Strand, **238**, 62–74.
Adenine·Methylthymine Base-pairs Enhance Non-uniformity in DNA Helices, **239**, 37–51.
Solution Structure of a Parallel-Stranded Tetraplex Formed by d(TG_4T) in the Presence of Sodium Ions by Nuclear Magnetic Resonance Spectroscopy, **243**, 458–471.
DNA Conformational Changes Associated with the Cooperative Binding of cI-repressor of Bacteriophage λ to O_R, **244**, 494–510.

DNA supercoiling
The Twist, Writhe and Overall Shape of Supercoiled DNA Change During Counterion-induced Transition from a Loosely to a Tightly Interwound Superhelix. Possible Implications for DNA Structure *in Vivo*, **235**, 825–847.
Crystallization of Inhibitor Complexes of an N-terminal 24 kDa Fragment of the DNA Gyrase B Protein, **241**, 128–130.
Computer Simulation of Protein-induced Structural Changes in Closed Circular DNA, **242**, 271–290.

DNA terminator
The *Bacillus subtilis* Replication Terminator System Functions in *Escherichia coli*, **240**, 275–280.
The Minimal Sequence Needed to Define a Functional DNA Terminator in *Bacillus subtilis*, **241**, 335–340.

DNA topoisomerase II ***see*** **Topoisomerase II**

DNA topology
The Loop Sequence Plays Crucial Roles for Isomerization of Intramolecular DNA Triplexes in Supercoiled Plasmids, **235**, 185–197.
Holliday Junction Crossover Topology, **236**, 91–105.
The Linkage Change of a Knotting Reaction Catalysed by Tn*3* Resolvase, **239**, 25–36.
Processive Recombination by Wild-type Gin and an Enhancer-independent Mutant. Insight into the Mechanisms of Recombination Selectivity and Strand Exchange, **243**, 437–457.

DNA transposition
DNA-Protein Cooperativity in the Assembly and Stabilization of Mu Strand Transfer Complex. Relevance of DNA Phasing and *att* Site Cleavage, **238**, 514–527.

DNA triplex
Enrichment of Human DNAs that Flank Poly(dA)·poly(dT) Tracts by Triplex DNA Formation, **237**, 193–200.
Resolution of the Three-stranded Recombination Intermediate Made by RecA Protein. An Essential Role of ATP Hydrolysis, **238**, 540–554.
A Parallel DNA Triplex as a Model for the Intermediate in Homologous Recombination, **239**, 181–200.

DNA unwinding element
DNA Helical Instability Facilitates Initiation at the SV40 Replication Origin, **235**, 496–507.

***Z*-DNA**
Structural Specificity of Peptides in *Z*-DNA Formation and Energetics of the Peptide-induced *B*–*Z* Transition of Poly(dG-m^5dC), **236**, 610–617.

DNA-invertases
A Novel Site-specific Recombinase Encoded by the *Streptococcus pyogenes* Plasmid pSM19035, **238**, 159–172.

DnaK
Different Peptide Binding Specificities of hsp70 Family Members, **241**, 133–135.
Isolation and Characterization of an *Escherichia coli* DnaK Mutant with Impaired ATPase Activity, **242**, 364–377.

DNA-protein interaction
MONTY: A Monte Carlo Approach to Protein-DNA Recognition, **235**, 318–324.
Interaction of Tn*5* Transposase with the Transposon Termini, **235**, 486–495.
Co-operative Binding of *Escherichia coli* SSB Tetramers to Single-stranded DNA in the $(SSB)_{35}$ Binding Mode, **236**, 106–123.
The Solution Structure of the Tyr41→His Mutant of the Single-stranded DNA Binding Protein Encoded by Gene V of the Filamentous Bacteriophage M13, **236**, 229–246.
Characterization of Preferred Deoxyribonuclease I Cleavage Sites, **236**, 405–411.
Requirement for an A-tract Structure at the Binding Site of Phage ϕ29 Transcriptional Activator, **237**, 175–181.
Combined Conformational Search and Finite-Difference Poisson–Boltzmann Approach for Flexible Docking Application to an Operator Mutation in the λ Repressor-Operator Complex, **238**, 455–465.
DNA-Protein Cooperativity in the Assembly and Stabilization of Mu Strand Transfer Complex Relevance of DNA Phasing and *att* Site Cleavage, **238**, 514–527.
Analysis of the DNA-binding Affinity, Sequence Specificity and Context Dependence of the Glucocorticoid Receptor Zinc Finger Region, **239**, 664 688.
A Model of the Complex between Single-stranded DNA and the Single-stranded DNA Binding Protein Encoded by Gene V of Filamentous Bacteriophage M13, **240**, 341–357.
Flow Linear Dichroism and Electron Microscope Analysis of Protein–DNA Complexes of a Mutant UvrB Protein that Binds to but cannot Kink DNA, **241**, 645–650.
Lambda *cI* Repressor Mutants Altered in Transcriptional Activation, **242**, 23–36.
DNA-binding Parameters of the HU Protein of *Escherichia coli* to Cruciform DNA, **242**, 116–129.
Reaching Out. Locating and Lengthening the Interdomain Linker in AraC Protein, **242**, 330–338.
Interaction of *EcoP15I* DNA Methyltransferase with Oligonucleotides Containing the Asymmetric Sequence 5′-CAGCAG-3′, **242**, 378–388.
A Symmetrical Model for the Domain Structure of Type I DNA Methyltransferases, **243**, 1–5.
Phosphorylation of the C-terminal Domain of Yeast Topoisomerase II by Casein Kinase II Affects DNA-Protein Interaction, **243**, 10–24.
DNA Conformational Changes Associated with the Cooperative Binding of cI-repressor of Bacteriophage λ to O_R, **244**, 494–510.

DNA/RNA binding
Crystallization and Preliminary X-ray Analysis of GAP 31. A Protein Which Inhibits the Life Cycle of HIV-1, **240**, 92–94.

DNase I
Characterization of Preferred Deoxyribonuclease I Cleavage Sites, **236**, 405–411.
DNase I Footprinting of *cis*-or *trans*-Diamminedichloroplatinum(II)-modified DNA, **236**, 969–974.

Docking
MONTY: A Monte Carlo Approach to Protein-DNA Recognition, **235**, 318–324.
PUZZLE: A New Method for Automated Protein Docking Based on Surface Shape Complementarity, **235**, 1021–1031.
The Use of Composite Crystal-field Environments in Molecular Recognition and the *de Novo* Design of Protein Ligands, **237**, 212–235.

)omain
Reaching Out. Locating and Lengthening the Interdomain Linker in AraC Protein, **242**, 330–338.

)omain 2·3/2·4
A Point Mutation at the Junction of Domain 2·3/2·4 of Transcription Factor σ^{70} Abrogates Productive Transcription and Restores its Expected Mobility on a Denaturing Gel, **242**, 9–22.

)omain interactions
Domain Interactions and Connecting Peptides in Lens Crystallins, **235**, 84–88.

)omain movement
High Resolution Structures of Holo and Apo Formate Dehydrogenase, **236**, 759–785.
Crystal Structures of *Escherichia coli* Aspartate Aminotransferase in Two Conformations. Comparison of an Unliganded Open and Two Liganded Closed Forms, **239**, 285–305.

)omain structure
Domain Structures of the MS Ring Component Protein (FliF) of the Flagellar Basal Body of *Salmonella typhimurium*, **236**, 546–555.
A Symmetrical Model for the Domain Structure of Type I DNA Methyltransferases, **243**, 1–5.
Bacterial Expression of Catalytically Active Fragments of the Multifunctional Enzyme Enniatin Synthetase, **243**, 116–122.

)omain–domain interaction
Solution Structure of an Isolated Antibody V_L Domain, **236**, 310–327.
Role of the Domain Domain Interaction in the Construction of the Antigen Combining Site. A Comparative Study by ^{1}H-^{15}N Shift Correlation NMR Spectroscopy of the Fv and Fab Fragments of Anti-dansyl Mouse Monoclonal Antibody, **243**, 494–503.

)ouble mutant cycles
Prediction of an Inter-residue Interaction in the Chaperonin GroEL from Multiple Sequence Alignment is Confirmed by Double-mutant Cycle Analysis, **238**, 133–138.
Decomposition of the Free Energy of a System in Terms of Specific Interactions. Implications for Theoretical and Experimental Studies, **240**, 167–176.

Double-stranded RNA
Fungal Virus Capsids are Cytoplasmic Compartments for the Replication of Double-stranded RNA Formed as Icosahedral Shells of Asymmetric Gag Dimers, **244**, 255–258.

Drosophila
Linker Insertion Mutagenesis of *Drosophila* Topoisomerase II. Probing The Structure of Eukaryotic Topoisomerase II, **235**, 436–447.
Identification of a Divergent Actin-related Protein in *Drosophila*, **235**, 1351–1356.
A Charge Change in an Evolutionarily-conserved Region of the Myosin Globular Head Prevents Myosin and Thick Filament Accumulation in *Drosophila*, **236**, 697–702.
The *Drosophila Broad-complex* Regulates Developmental Changes in Transcription and Chromatin Structure of the 67B Heat-shock Gene Cluster, **241**, 353–362.
Revision in Sequence of CAD Aspartate Transcarbamylase Domain of *Drosophila*, **243**, 364–366.

Drosophila kelch
Drosophila kelch Motif is Derived from a Common Enzyme Fold, **236**, 1277–1282.

Drosophila melanogaster
The Molecular Cloning and Characterization of *Drosophila melanogaster* Myosin-IA and Myosin-IB, **239**, 347–356.
Genes Encoding Actin-related Proteins of *Drosophila melanogaster*, **241**, 498–503.
Molecular Modeling of RNA Polymerase II Mutations onto DNA Polymerase I, **244**, 13–22.

Drug design
Planar Stacking Interactions of Arginine and Aromatic Side-Chains in Proteins, **235**, 709–717.
Two Crystal Forms of the Extracellular Domain of Type I Tumor Necrosis Factor Receptor, **239**, 332–335.
Rational Automatic Search Method for Stable Docking Models of Protein and Ligand, **243**, 310–326.

Drug pharmacophore
Conformational Drug Determinants of the Sequence Specificity of Drug-stimulated Topoisomerase II DNA Cleavage, **235**, 1218–1230.

Drug resistance
Locations of Anti-AIDS Drug Binding Sites and Resistance Mutations in the Three-dimensional Structure of HIV-1 Reverse Transcriptase. Implications for Mechanisms of Drug Inhibition and Resistance, **243**, 369–387.

Drug–protein interactions
Drug–Protein Interactions. Refined Structures of Three Sulfonamide Drug Complexes of Human Carbonic Anhydrase I Enzyme, **243**, 298–309.

dsDNA
see also DNA.
Hydrogen Exchange Dynamics of the P22 Virion Determined by Time-resolved Raman Spectroscopy. Effects of Chromosome Packaging on the Kinetics of Nucleotide Exchanges, **241**, 68–82.

Duck delta II crystallin
Crystallization and Preliminary X-ray Analysis of a Mutant Duck δ II Crystallin, **243**, 944–946.

Duplex melting
Multiple DNA Conformational Changes Induced by an Initiator Protein Precede the Nicking Reaction in a Rolling Circle Replication Origin, **237**, 388–400.

Dynamic structural heterogeneity
Biotin and Biotin Analogues Specifically Modify the Fluorescence Decay of Avidin, **242**, 559–565.

Dynamics
Hydrogen Exchange Dynamics of the P22 Virion Determined by Time-resolved Raman Spectroscopy. Effects of Chromosome Packaging on the Kinetics of Nucleotide Exchanges, **241**, 68–82.

Dystrophin
Conformation and Phasing of Dystrophin Structural Repeats, **235**, 1271–1277.

EC 1.1.1.29
Crystal Structure of a NAD-dependent D-Glycerate Dehydrogenase at 2·4 Å Resolution, **236**, 1123–1140.

Ecdysone
The *Drosophila Broad-complex* Regulates Developmental Changes in Transcription and Chromatin Structure of the 67B Heat-shock Gene Cluster, **241**, 353–362.

Echinoderm
Native Collagen Fibrils From Echinoderms are Molecularly Bipolar, **235**, 73–79.

***Eco*prrI**
The *Escherichia coli prr* Region Encodes a Functional Type IC DNA Restriction System Closely Integrated with an Anticodon Nuclease Gene, **237**, 266–274.

***Eco*R1241**
Deletions within the DNA Recognition Subunit of M.*Eco*R124I that Identify a Region Involved in Protein–Protein Interactions between HsdS and HsdM, **241**, 35–43.

Edestin
Crystallographic Characterization and Molecular Symmetry of Edestin, a Legumin from Hemp, **235**, 361–363.

Fe(II)-EDTA
GAAA Tetraloop and Conserved Bulge Stabilize Tertiary Structure of a Group I Intron Domain, **236**, 49–63.

^2H_2O effects
Stability against Denaturation Mechanisms in Halophilic Malate Dehydrogenase Adapt to Solvent Conditions. **244**, 436–447.

EF-hand
Hidden Markov Models in Computational Biology. Applications to Protein Modeling. **235**, 1501–1531.

EF-Tu *see* Elongation factor Tu

Elasmobranch cDNA
Carbamyl Phosphate Synthetase III, an Evolutionary Intermediate in the Transition Between Glutamine-dependent and Ammonia-dependent Carbamyl Phosphate Synthetases. **243**, 131–140.

Elastic energy
Computer Simulation of Protein-induced Structural Changes in Closed Circular DNA. **242**, 271–290.

Electric charge
Determination of Electrostatic Potential Around Specific Locations on the Surface of Actin by Diffusion-enhanced Fluorescence Resonance Energy Transfer. **241**, 714–731.

Electric dichroism
The Structure of the RNA Polymerase-Promoter Complex. DNA-bending-angle by Quantitative Electrooptics. **236**, 1–6.

Electron cryomicroscopy
Isolation, Characterization and Structure of Bacterial Flagellar Motors Containing the Switch Complex. **235**, 1261–1270.
Three-dimensional Structure of Calicivirus. **240**, 256–264.
Protein Subunit Structures in the Herpes Simplex Virus A-capsid Determined from 400 kV Spot-scan Electron Cryomicroscopy. **242**, 456–469.

Electron crystallography
See also Crystallography.
Electron Microscopy of Cytochrome *c* Oxidase Crystals. Monomer–Dimer Relationship and Cytochrome *c* Binding Site. **237**, 275–297.
Electron Cryomicroscopy of *Bacillus stearothermophilus* 50 S Ribosomal Subunits Crystallized on Phospholipid Monolayers. **239**, 689–697.

Electron diffraction
Analysis of Electron Microscope Images and Electron Diffraction Patterns of Thin Crystals of Ø29 Connectors in Ice. **240**, 281–287.

Electron microscopy
See also Dark-field electron microscopy.
Interactions of Plasminogen with Polymerizing Fibrin and its Derivatives, Monitored with a Photoaffinity Cross-linker and Electron Microscopy. **235**, 1117–1135.
Visualization of Protein–Nucleic Acid Interactions Involved in the *in Vitro* Assembly of the *Escherichia coli* 50 S Ribosomal Subunit. **235**, 1239–1250.
PA28 Activator Protein Forms Regulatory Caps on Proteasome Stacked Rings. **236**, 7–15.
Visualization of a Tertiary Structural Domain of the *Tetrahymena* Group I Intron by Electron Microscopy. **236**, 64–71.
Electron Microscopy of Cytochrome *c* Oxidase Crystals. Monomer–Dimer Relationship and Cytochrome *c* Binding Site. **237**, 275–297.
The Interhexameric Contacts in the Four-hexameric Hemocyanin from the Tarantula *Eurypelma californicum*. A Tentative Mechanism for Cooperative Behavior. **237**, 464–478.
Structural and Electrophysiological Analysis of Annexin V Mutants. Mutagenesis of Human Annexin V, an *in Vitro* Voltage-gated Calcium Channel, Provides Information about the Structural Features of the Ion Pathway, the Voltage Sensor and the Ion Selectivity Filter. **237**, 479–499.
Three-dimensional Structure of Membrane-bound Annexin V. A Correlative Electron Microscopy-X-ray Crystallography Study. **238**, 199–213.
The Structure of F-actin. Results of Global Searches Using Data from Electron Microscopy and X-ray Crystallography. **240**, 138–154.
Structure of Phosphorylase Kinase. A Three-dimensional Model Derived from Stained and Unstained Electron Micrographs. **241**, 94–102.
Filamentous Hemagglutinin of *Bordetella pertussis*. A Bacterial Adhesin Formed as a 50-nm Monomeric Rigid Rod Based on a 19-residue Repeat Motif Rich in Beta Strands and Turns. **241**, 110–124.
Flow Linear Dichroism and Electron Microscope Analysis of Protein–DNA Complexes of a Mutant UvrB Protein that Binds to but cannot Kink DNA. **241**, 645–650.
Towards Atomic Interpretation of F-Actin Filament Three-dimensional Reconstructions. **242**, 683–700.
Conformation and Fibrillogenesis of Alzheimer Aβ Peptides with Selected Substitution of Charged Residues. **244**, 64–73.
Three-dimensional Reconstruction from a Frozen-hydrated Specimen of the Chiton *Lepidochiton sp.* Hemocyanin. **244**, 640–647.

Electron transfer
Crystal Structure Analysis and Refinement at 2·15 Å Resolution of Amicyanin, a Type I Blue Copper Protein, from *Thiobacillus versutus*. **236**, 1196–1211.
The Refined Structures of a Stabilized Mutant and of Wild-type Pyruvate Oxidase from *Lactobacillus plantarum*. **237**, 315–335.
Crystallization and Preliminary Crystallographic Investigation of Electron-transfer Flavoprotein from the Bacterium *Methylophilus* W3A1. **240**, 265–266.
Solution Structure of the Type 1 Blue Copper Protein Amicyanin from *Thiobacillus versutus*. **240**, 358–371.
Refined Crystal Structure of the 2[4Fe-4S] Ferredoxin from *Clostridium acidurici* at 1·84 Å Resolution. **243**, 683–695.

Electron transport
Sequences, Organization and Analysis of the *hupZM-NOQRTV* Genes from the *Azotobacter chroococcum* Hydrogenase Gene Cluster. **243**, 549–557.

Electrophoresis, agarose gel *see* Gel electrophoresis

Electrophysiology
Structural and Electrophysiological Analysis of Annexin V Mutants. Mutagenesis of Human Annexin V, an *in Vitro* Voltage-gated Calcium Channel, Provides Information about the Structural Features of the Ion Pathway, the Voltage Sensor and the Ion Selectivity Filter. **237**, 479–499.

Electrostatic field
Electrostatic Properties of Two Porin Channels from *Escherichia coli*. **240**, 372–384.

Electrostatic modelling
Improved Continuum Electrostatic Modelling in Proteins, with Comparison to Experiment. **236**, 887–903.

Electrostatics
The Activity of Porcine Pancreatic Phospholipase A_2 in 20 % Alcohol/Aqueous Solvent, by Experiment and Electrostatics Calculations. **236**, 904–917.
Comparison of the Conformational Stability of the Molten Globule and Native States of Horse Cytochrome *c*. Effects of Acetylation, Heat, Urea and Guanidine-Hydrochloride. **237**, 336–348.
Structural Origins of pH and Ionic Strength Effects on Protein Stability. Acid Denaturation of Sperm Whale Apomyoglobin. **237**, 602–614.
Salt Effects on Ligand–DNA Binding. Minor Groove Binding Antibiotics. **238**, 245–263.
Salt Effects on Protein–DNA Interactions. The λcI Repressor and *Eco*RI Endonuclease. **238**, 264–280.
Prediction of pH-dependent Properties of Proteins. **238**, 415–436.
Determination of Electrostatic Potential Around Specific Locations on the Surface of Actin by Diffusion-enhanced Fluorescence Resonance Energy Transfer. **241**, 714–731.

Elongation
Bacteriophage Lambda N-Dependent Transcription Antitermination. Competition for an RNA Site May Regulate Antitermination, **236**, 217–228.
A DNA Minor Groove-binding Ligand Both Potentiates and Arrests Transcription by RNA Polymerase II. Elongation Factor SII Enables Readthrough at Arrest Sites, **236**, 725–737.
Stability of *Escherichia coli* Transcription Complexes Near an Intrinsic Terminator, **244**, 36–51.
RNA Chain Elongation and Termination by Mammalian RNA Polymerase III. Analysis of tRNA Gene Transcription by Imposing a Reversible Factor-mediated Block to Elongation using a Sequence-specific DNA Binding Protein, **244**, 482–493.

Elongation factor
A DNA Minor Groove-binding Ligand Both Potentiates and Arrests Transcription by RNA Polymerase II. Elongation Factor SII Enables Readthrough at Arrest Sites, **236**, 725–737.

Elongation factor 1α
Increased Longevity of EF-1α High-fidelity Mutants in *Podospora anserina*, **235**, 231–236.
Crystallization of a Hyperthermophilic Archaeal Elongation Factor 1α, **242**, 175–177.

Elongation factor Tu
Selective Perturbation of G530 of 16 S rRNA by Translational Miscoding Agents and a Streptomycin-dependence Mutation in Protein S12, **235**, 156–172.
Mutations in 23 S Ribosomal RNA Perturb Transfer RNA Selection and can Lead to Streptomycin Dependence, **235**, 813–824.

Elongation factors
Synergism between the GTPase Activities of EF-Tu·GTP and EF-G·GTP on Empty Ribosomes. Elongation Factors as Stimulators of the Ribosomal Oscillation between Two Conformations, **242**, 644–654.

Empirical energy function calculations
Analysis of Two-residue Turns in Proteins, **238**, 733–747.

Enantiomorphous relationships
Significance of Root-Mean-Square Deviation in Comparing Three-dimensional Structures of Globular Proteins, **235**, 625–634.

Encapsidation
Analytical Study of Rat Retrotransposon VL30 RNA Dimerization *in Vitro* and Packaging in Murine Leukemia Virus, **240**, 434–444.

End-joining
Single Base-Pair Deletions Induced by Bleomycin at Potential Double-strand Cleavage Sites in the *aprt* Gene of Stationary Phase Chinese Hamster Ovary D422 Cells, **243**, 216–226.

Endo-β-*N*-acetylglucosaminidase
Crystallization and Preliminary Crystallographic Analysis of Two Endo-β-*N*-acetylglucosaminidases, Endo H and Endo F_1, **237**, 157–159.

Endo F_1
Crystallization and Preliminary Crystallographic Analysis of Two Endo-β-*N*-acetylglucosaminidases, Endo H and Endo F_1, **237**, 157–159.

Endo H
Crystallization and Preliminary Crystallographic Analysis of Two Endo-β-*N*-acetylglucosaminidases, Endo H and Endo F_1, **237**, 157–159.

Endoglucanase
Crystallization and Preliminary X-ray Diffraction Studies of an Endoglucanase from *Aspergillus aculeatus*, **241**, 278–280.

Endoglycosidase
Crystallization and Preliminary Crystallographic Analysis of Two Endo-β-*N*-acetylglucosaminidases, Endo H and Endo F_1, **237**, 157–159.
Purification and Crystallization of the Endoglycosidase PNGase F, a Peptide:*N*-glycosidase from *Flavobacterium meningosepticum*, **241**, 624–626.

Endonuclease
Deletions within the DNA Recognition Subunit of M.*Eco*R124I that Identify a Region Involved in Protein–Protein Interactions between HsdS and HsdM, **241**, 35–43.
Preliminary Crystallographic Study of *Escherichia coli* RuvC Protein. An Endonuclease Specific for Holliday Junctions, **241**, 281–282.
DNA Double-strand Break *in vivo* at the 3′ Extremity of Exons Located Upstream of Group II Introns. Senescence and Circular DNA Introns in *Podospora* Mitochondria, **242**, 630–643.

Endo-polygalacturonase II
Crystallization and Preliminary Crystallographic Characterization of Endo-polygalacturonase II from *Aspergillus niger*, **243**, 351–352.

Endosymbiosis
Protein Substitution in Chloroplast Ribosome Evolution. A Eukaryotic Cytosolic Protein has Replaced its Organelle Homologue (L23) in Spinach, **240**, 28–41.

δ-endotoxin
Crystallization and Preliminary X-ray Diffraction Studies of the Lepidopteran-specific Insecticidal Crystal Protein CrylA(a), **243**, 530–532.

Energy, activating, *see* Activating energy

Energy coupling
Energy Coupling in an Ion Pump. The Reprotonation Switch of Bacteriorhodopsin, **243**, 621–638.

Energy transduction
Isolation, Characterization and Structure of Bacterial Flagellar Motors Containing the Switch Complex, **235**, 1261–1270.

Engineered disulfides
Thermal Stabilization of Thymidylate Synthase by Engineering Two Disulfide Bridges Across the Dimer Interface, **235**, 89–94.

Enoyl reductase
Crystallization of the NADH-specific Enoyl Acyl Carrier Protein Reductase from *Brassica napus*, **237**, 240–242.

Enoyl-ACP reductase
Crystallization and Preliminary X-ray Diffraction Studies of the Enoyl-ACP Reductase from *Escherichia coli*, **243**, 126–127.

Ensemble IRMA
Nuclear Magnetic Resonance Solution Structure of the Arc Repressor Using Relaxation Matrix Calculations, **236**, 328–341.

Enthalpy of oxygenation
Synergistic Modulation by Chloride and Organic Phosphates of Hemoglobin from Bear (*Ursus arctos*), **236**, 1401–1406.

Enthalpy–entropy
Solvent Rearrangement in an Antigen–Antibody Interface Introduced by Site-directed Mutagenesis of the Antibody Combining Site, **238**, 496–500.

Entropy
See also Conformational entropy.
Determination of α-Helix Propensity within the Context of a Folded Protein. Sites 44 and 131 in Bacteriophage T4 lysozyme, **235**, 600–624.
The Contribution of Vibrational Entropy to Molecular Association. The Dimerization of Insulin, **238**, 405–414.
Analysis and Classification of Disulphide Connectivity in Proteins. The Entropic Effect of Cross-linkage, **244**, 448–463.

envM
Crystallization and Preliminary X-ray Diffraction Studies of the Enoyl-ACP Reductase from *Escherichia coli*, **243**, 126–127.

Enzyme
Crystallization of D-Lactate Dehydrogenase from *Lactobacillus bulgaricus*, **235**, 370–371.
ζ-Crystallin: A Lens-specific Promoter and the Gene Recruitment of an Enzyme as a Crystallin, **236**, 669–678.
Sequence Analysis Identifies the Proline Dehydrogenase and Δ^1-Pyrroline-5-carboxylate Dehydrogenase Domains of the Multifunctional *Escherichia coli* PutA Protein, **243**, 950–956.

Enzyme activity
The Activity of Porcine Pancreatic Phospholipase A_2 in 20% Alcohol/Aqueous Solvent, by Experiment and Electrostatics Calculations, **236**, 904–917.
Toward a Mechanism for the Allosteric Transition of Pig Kidney Fructose-1,6-Bisphosphatase, **244**, 609–624.

Enzyme catalysis
Refined Crystal Structures of Glucoamylase from *Aspergillus awamori* var. *X100*, **238**, 575–591.

Enzyme engineering
Non-phosphorylating GAPDH of Higher Plants is a Member of the Aldehyde Dehydrogenase Superfamily with no Sequence Homology to Phosphorylating GAPDH, **237**, 165–171.

Enzyme evolution
Computer Analysis of Bacterial Haloacid Dehalogenases Defines a Large Superfamily of Hydrolases with Diverse Specificity. Application of an Iterative Approach to Database Search, **244**, 125–132.

Enzyme kinetics
The Role of Glu187 in the Regulation of Phosphofructokinase by Phosphoenolpyruvate, **235**, 68–72.

Enzyme mechanism
Molecular Structure at 1·8 Å of Mouse Liver Class Pi Glutathione S-transferase Complexed with *S*-(*p*-Nitrobenzyl)glutathione and Other Inhibitors, **237**, 298–314.
(His)C^{ε}-H···O=C< Hydrogen Bond in the Active Sites of Serine Hydrolases, **241**, 83–93.

Enzyme reconstitution
Asymmetric Arrangement of Two Alpha Subunits within *Escherichia coli* RNA Polymerase. Involvement of One Alpha Subunit in Contact with cAMP Receptor Protein, **236**, 1283–1288.

Enzyme regulation
Toward a Mechanism for the Allosteric Transition of Pig Kidney Fructose-1,6-Bisphosphatase, **244**, 609–624.

Enzyme specificity
X-ray Analysis at 2·0 Å Resolution of Mouse Submaxillary Renin Complexed with a Decapeptide Inhibitor CH-66, Based on the 4–16 Fragment of Rat Angiotensinogen, **236**, 342–360.

Enzyme structure
Crystalline Mitochondrial Aspartate Aminotransferase Exists in Only Two Conformations, **236**, 963–968.
Conserved Patterns in the Cu,Zn Superoxide Dismutase Family, **238**, 366–386.
Crystal Structure of the Mutant D52S Hen Egg White Lysozyme with an Oligosaccharide Product, **243**, 856–872.

Episomal group II IVS p1DNA
Transposable Group II Introns in Fission and Budding Yeast. Site-specific Genomic Instabilities and Formation of Group II IVS p1DNAs, **243**, 157–166.

Epitope mapping
Crystal Structure of a Peptide Complex of Anti-influenza Peptide Antibody Fab 26/9. Comparison of Two Different Antibodies Bound to the Same Peptide Antigen, **241**, 534–556.
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP) I. Saturation and Alanine-scanning Mutagenesis, **243**, 595–602.
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP). II. Role at Class I and Class II CAP-dependent Promoters, **243**, 603–610.

Epitopes
A Monoclonal Antibody Epitope on Keratin 8 Identified Using a Phage Peptide Library, **235**, 61–67.
Defining the Requirements for an Antibody Epitope or Influenza Virus Neuraminidase: How Tolerant are Protein Epitopes?, **235**, 747–759.

Epitope-tag
Yeast TBP can Replace its Human Homologue in the RNA Polymerase I-specific Multisubunit Factor SL1, **243**, 840–845.

Epoxide hydrolases
Computer Analysis of Bacterial Haloacid Dehalogenases Defines a Large Superfamily of Hydrolases with Diverse Specificity. Application of an Iterative Approach to Database Search, **244**, 125–132.

EPR
The Orientation of Spin-probes Attached to Cys374 on Actin in Oriented Gels, **236**, 703–709.

Equus
A Novel tRNA Species as an Origin of Short Interspersed Repetitive Elements (SINEs). Equine SINEs May Have Originated From $tRNA^{Ser}$, **239**, 731–735.

Erabutoxin b
Tertiary Structure of Erabutoxin b in Aqueous Solution as Elucidated by Two-dimensional Nuclear Magnetic Resonance, **240**, 155–166.

Error frequency
Accuracy of Replication Past the T-C (6-4) Adduct, **235**, 465–471.

Error-free UV mutagenesis
Unusual Kinetics of Uracil Formation in Single and Double-stranded DNA by Deamination of Cytosine in Cyclobutane Pyrimidine Dimers, **235**, 807–812.

***Erwinia chrysanthemi* OutD**
pIV, a Filamentous Phage Protein that Mediates Phage Export Across the Bacterial Cell Envelope, Forms a Multimer, **238**, 187–198.

Erythrina caffra
Erythrina caffra Trypsin Inhibitor Retains Its Native Structure and Function After Reducing Its Disulfide Bonds, **239**, 276–284.

Escherichia coli
Explanation for Different Types of Regulation of Arginine Biosynthesis in *Escherichia coli* B and *Escherichia coli* K12 Caused by a Difference Between Their Arginine Repressors, **235**, 221–230.
Crystallization and Preliminary X-ray Investigation of Holotryptophanases from *Escherichia coli* and *Proteus vulgaris*, **235**, 783–786.
Fur Regulon in Gram-negative Bacteria. Identification and Characterization of New Iron-regulated *Escherichia coli* Genes by a Fur Titration Assay, **236**, 531–545.
High Resolution Mapping of UV-induced Photoproducts in the *Escherichia coli lacI* Gene. Inefficient Repair of the Non-transcribed Strand Correlates with High Mutation Frequency, **238**, 319–332.
Crystallization and Preliminary X-ray Analysis of Copper Amine Oxidase from *Escherichia coli* K-12, **238**, 635–637.
Crystal Structures of *Escherichia coli* Aspartate Aminotransferase in Two Conformations. Comparison of an Unliganded Open and Two Liganded Closed Forms, **239**, 285–305.
Alterations of Receptor Specificities of Coliphages of the T2 Family, **240**, 105–110.
Helicase Motifs V and VI of the *Escherichia coli* UvrB Protein of the UvrABC Endonuclease are Essential for the Formation of the Preincision Complex, **240**, 294–307.

Crystallization and Preliminary X-ray Diffraction Studies on a Soluble *Escherichia coli* Quinone Oxidoreductase, **240**, 501–503.
Transcription Activation by the *Escherichia coli* Cyclic AMP Receptor Protein. Receptors Bound in Tandem at Promoters Can Interact Synergistically, **241**, 341–352.
Structure–Function Relationship of the Lrp-binding Region Upstream of *LysU* in *Escherichia coli*, **241**, 378–389.
Determinants of Receptor Specificity of Coliphages of the T4 Family. A Chaperone Alters the Host Range, **241**, 524–533.
The Activation of *Escherichia coli* Aspartate Transcarbamylase by ATP. Specific Involvement of Helix H2′ at the Hydrophobic Interface Between the Two Domains of the Regulatory Chains, **242**, 139–149.
Crystallization and Preliminary X-ray Analysis of the Two Domains of Glucosamine-6-phosphate Synthase from *Escherichia coli*, **242**, 703 705.
Hexameric Rings of *Escherichia coli* RuvB Protein: Cooperative Assembly, Processivity and ATPase Activity, **243**, 208–215.
Mutations in Helix 34 of *Escherichia coli* 16 S Ribosomal RNA Have Multiple Effects on Ribosome Function and Synthesis, **243**, 402–412.
Thymine Starvation-induced Structural Changes in *Escherichia coli* DNA. Detection by Pulsed Field Gel Electrophoresis and Evidence for Involvement of Homologous Recombination, **243**, 611–620.
Preliminary X-ray Diffraction Analysis of Crystals of the P_{II} Protein from *Escherichia coli*, **243**, 796–798.

Escherichia coli k12
Explanation for Different Types of Regulation of Arginine Biosynthesis in *Escherichia coli* B and *Escherichia coli* K12 Caused by a Difference Between Their Arginine Repressors, **235**, 221–230.
Nucleotide Sequence of the *Escherichia coli* K12 Histidine Operon Revisited, **239**, 433–435.

Escherichia coli polymerase
Context-dependent Effects of Upstream A-Tracts. Stimulation or Inhibition of *Escherichia coli* Promoter Function, **239**, 466–475.

Escherichia coli $tRNA^{Ser}$
Escherichia coli Seryl-tRNA Synthetase Recognizes $tRNA^{Ser}$ by Its Characteristic Tertiary Structure, **236**, 738–748.

Essential residues
Genetic Studies of the *lac* Repressor. XIV. Analysis of 4000 Altered *Escherichia coli lac* Repressors Reveals Essential and Non-essential Residues, As Well As "Spacers" Which Do Not Require a Specific Sequence, **240**, 421–433.

Esterase
Crystallization and Preliminary X-ray Analysis of a Lipase from *Bacillus subtilis*, **238**, 857–859.

Estrogen
The Human Calbindin-D_{9k} Gene. Complete Structure and Implications on Steroid Hormone Regulation, **235**, 1231–1238.

Ethylation interference
Transcription of the *xyl* Operon is Controlled in *Bacillus subtilis* by Tandem Overlapping Operators Spaced by Four Base-pairs, **243**, 413–424.

Ethylene biosynthesis
Crystallization and Preliminary X-ray Analysis of Recombinant 1-Aminocyclopropane-1-carboxylate Synthase from Apple. A Key Enzyme in the Biosynthesis of the Plant Hormone Ethylene, **243**, 947–949.

Evaluation
Redefining the Goals of Protein Secondary Structure Prediction, **235**, 13–26.

Evolution
See also Enzyme evolution; Protein evolution.
SAV, an Archaebacterial Gene with Extensive Homology to a Family of Highly Conserved Eukaryotic ATPases, **235**, 396–401.
Bona Fide Prediction of Aspects of Protein Conformation. Assigning Interior and Surface Residues from Patterns of Variation and Conservation in Homologous Protein Sequences, **235**, 926–958.
Transfer RNA Mutation and the Malleability of the Genetic Code, **235**, 1377–1380.
Crystallization of Catechol-1,2 Dioxygenase from *Pseudomonas arvilla C-1*, **236**, 377–378.
Non-phosphorylating GAPDH of Higher Plants is a Member of the Aldehyde Dehydrogenase Superfamily with no Sequence Homology to Phosphorylating GAPDH, **237**, 165–171.
The *Escherichia coli prr* Region Encodes a Functional Type IC DNA Restriction System Closely Integrated with an Anticodon Nuclease Gene, **237**, 266–274.
Evolution of Phosphagen Kinase. Primary Structure of Glycocyamine Kinase and Arginine Kinase from Invertebrates, **237**, 353 357.
Molecular Phylogeny of the Alphaherpesvirinae Subfamily and a Proposed Evolutionary Timescale, **238**, 9–22.
Conserved Patterns in the Cu,Zn Superoxide Dismutase Family, **238**, 366–386.
BmCF1, a *Bombyx mori* RXR-type Receptor Related to the *Drosophila ultraspiracle*, **238**, 479–486.
The Ribosomal RNA Gene Region in *Acanthamoeba castellanii* Mitochondrial DNA. A Case of Evolutionary Transfer of Introns between Mitochondria and Plastids?, **239**, 476–499.
A Novel tRNA Species as an Origin of Short Interspersed Repetitive Elements (SINEs). Equine SINEs May Have Originated From $tRNA^{Ser}$, **239**, 731–735.
Mutational Analysis of the C-Terminal Region of *Saccharomyces cerevisiae* Ribosomal Protein L25 *in Vitro* and *in Vivo* Demonstrates the Presence of Two Distinct Functional Elements, **240**, 243 255.
Amplification of Distinct Subfamilies of Short Interspersed Elements During Evolution of the Salmonidae, **241**, 633–644.
The Immunoglobulin Fold. Structural Classification, Sequence Patterns and Common Core, **242**, 309–320.
On the Identification of Group II Introns in Nucleotide Sequence Data, **242**, 389–396.
Generality of the tRNA Origin of Short Interspersed Repetitive Elements (SINEs). Characterization of Three Different tRNA-derived Retroposons in the Octopus, **243**, 25–37.
Collagen Fibril Structure in Lamprey, **243**, 38–47.

Evolutive conservation
OXA1, a *Saccharomyces cerevisiae* Nuclear Gene whose Sequence is Conserved from Prokaryotes to Eukaryotes Controls Cytochrome Oxidase Biogenesis, **239**, 201–212.

Excluded volume
Quantification of the Effect of Excluded Volume on Double-stranded DNA, **242**, 547–558.

Exonuclease
Production of UV-induced Frameshift Mutations *in Vitro* by DNA Polymerases Deficient in 3′→5′ Exonuclease Activity, **240**, 226–242.
The Processive Reaction Mechanism of Ribonuclease II, **243**, 930–943.

Expression
Gene expression.
Preliminary X-ray Analysis of a Truncated Form of Recombinant Fructose-2,6-bisphosphatase, **235**, 1147–1151.
Purification, Characterization and Crystallization of *Acanthamoeba* Profilin Expressed in *Escherichia coli*, **236**, 950–952.
Expression, Purification, Crystallization and Preliminary X-ray Analysis of Human Argininosuccinic Acid Lyase, **239**, 336–338.

Purification, Characterization and Crystallization of Human Platelet Profilin Expressed in *Escherichia coli*, **241**, 480–482.
Human Immunodeficiency Virus Type 1 Tat Directs Transcription Through Attenuation Sites within the Mouse *c-myc* Gene, **243**, 568–573.
Expression, Crystallization and Preliminary Crystallographic Analysis of Human Carbonyl Reductase, **244**, 659–664.

Extracellular matrix
Changes in Calcium and Collagen IV Binding Caused by Mutations in the EF Hand and Other Domains of Extracellular Matrix Protein BM40 (SPARC, Osteonectin), **238**, 563–574.
Collagen Fibril Structure in Lamprey, **243**, 38–47.

Extra-cellular secretion
pIV, a Filamentous Phage Protein that Mediates Phage Export Across the Bacterial Cell Envelope, Forms a Multimer, **238**, 187–198.

Eye lens
Eye lens *see* Lens.

f1
f1 *see* Bacteriophage f1.

Fab
Three-dimensional Structures of the Free and the Antigen-complexed Fab from Monoclonal Anti-lysozyme Antibody D44.1, **243**, 767–781.

Fab fragment
Crystallization and Preliminary X-ray Analysis of the Monoclonal Anti-tumor Antibody BR96 and its Complex with the Le^y Determinant, **235**, 372–376.
Crystallization and Preliminary X-ray Analysis of an Anti-Staphylococcal Nuclease–Staphylococcal Nuclease Complex and of a Second Anti-Staphylococcal Nuclease Antibody, **239**, 154–157.
Structure Determination of an Fab Fragment that Neutralizes Human Rhinovirus 14 and Analysis of the Fab-Virus Complex, **240**, 127–137.
Crystallization and Preliminary X-ray Analysis of the Fab Fragment of a Human Monoclonal IgM Rheumatoid Factor (2A2), **242**, 706–708.
Preparation, Characterization and Crystallization of an Antibody Fab Fragment that Recognizes RNA. Crystal Structures of Native Fab and Three Fab-mononucleotide Complexes, **243**, 283–297.
Role of the Domain–Domain Interaction in the Construction of the Antigen Combining Site. A Comparative Study by ^1H-^{15}N Shift Correlation NMR Spectroscopy of the Fv and Fab Fragments of Anti-dansyl Mouse Monoclonal Antibody, **243**, 494–503.
The Third IgG-Binding Domain from Streptococcal Protein G. An Analysis by X-ray Crystallography of the Structure Alone and in a Complex with Fab, **243**, 906–918.

FabI
Crystallization and Preliminary X-ray Diffraction Studies of the Enoyl-ACP Reductase from *Escherichia coli*, **243**, 126–127.

Fabry disease
Crystallization and Preliminary X-ray Analysis of Human α-Galactosidase A Complex, **239**, 578–580.

Fab–virus complex
Structure Determination of an Fab Fragment that Neutralizes Human Rhinovirus 14 and Analysis of the Fab-Virus Complex, **240**, 127–137.

F-actin
See also Actin.
The Structure of F-actin. Results of Global Searches Using Data from Electron Microscopy and X-ray Crystallography, **240**, 138–154.
Towards Atomic Interpretation of F-Actin Filament Three-dimensional Reconstructions, **242**, 683–700.

Factor D
Structure of Human Factor D. A Complement System Protein at 2·0 Å Resolution, **235**, 695–708.

Factor XIIa
The Corn Inhibitor of Blood Coagulation Factor XIIa. Crystallization and Preliminary Crystallographic Analysis, **236**, 385–387.

Factorial design
Quantitative Analysis of Crystal Growth of Tryptophanyl-tRNA Synthetase Crystal Polymorphism and Its Relationship to Catalysis, **238**, 346–365.

FAD
See Flavin adenine dinucleotide.

Fasciclin
Expression and Crystallization of a Soluble Form of *Drosophila* Fasciclin III, **241**, 483–487.

FASTA algorithm
On the Identification of Group II Introns in Nucleotide Sequence Data, **242**, 389–396.

Fatty acid synthase
Crystallization of the Malonyl Coenzyme A–Acyl Carrier Protein Transacylase from *Escherichia coli*, **242**, 99–102.
Crystallization and Preliminary X-ray Diffraction Studies of the Enoyl-ACP Reductase from *Escherichia coli*, **243**, 126–127.

Fatty acid synthesis
Preliminary X-ray Crystallographic Analysis of Biotin Carboxylase Isolated from *Escherichia coli*, **235**, 367–369.

fd
In Vivo Characterization of Mutants of the Bacteriophage f1 Gene V Protein Isolated by Saturation Mutagenesis, **236**, 556–571.

Ferredoxin
Refined Crystal Structure of the 2[4Fe-4S] Ferredoxin from *Clostridium acidurici* at 1·84 Å Resolution, **243**, 683–695.

Ferredoxin $NADP^+$ reductase
Diffraction Quality Crystals of Protein X from *Azotobacter vinelandii*, **241**, 620–621.

Ferrous-dependent oxygenases
Crystallization and Preliminary X-ray Diffraction Studies on a Recombinant Isopenicillin N Synthase from *Cephalosporium acremonium*, **242**, 712–714.

Fiber X-ray diffraction
Structure Determination of Cucumber Green Mottle Mosaic Virus by X-ray Fiber Diffraction. Significance for the Evolution of Tobamoviruses, **239**, 371–384.
Collagen Fibril Structure in Lamprey, **243**, 38–47.

Fibre diffraction
Molecular Models and Structural Comparisons of Native and Mutant Class I Filamentous Bacteriophages. Ff(fd, f1, M13), If1 and IKe, **235**, 260–286.

Fibril
Fibril, *see* Collagen.

Fibrin
Interactions of Plasminogen with Polymerizing Fibrin and its Derivatives, Monitored with a Photoaffinity Cross-linker and Electron Microscopy, **235**, 1117–1135.
Solution Structure of a Pair of Fibronectin Type 1 Modules with Fibrin Binding Activity, **235**, 1302–1311.

Fibrinolysis
Interactions of Plasminogen with Polymerizing Fibrin and its Derivatives, Monitored with a Photoaffinity Cross-linker and Electron Microscopy, **235**, 1117–1135.

Fibritin
Fibritin Encoded by Bacteriophage T4 Gene *wac* has a Parallel Triple-stranded α-Helical Coiled-coil Structure, **242**, 470–486.

Fibroblast
Delayed Triple Helix Formation of Mutant Collagen from Patients with Osteogenesis Imperfecta, **236**, 940–949.

Fibronectin
Solution Structure of a Pair of Fibronectin Type 1 Modules with Fibrin Binding Activity, **235**, 1302–1311.
Crystal Structure of the Tenth Type III Cell Adhesion Module of Human Fibronectin, **236**, 1079–1092.
Crystals of the Cell-binding Module of Fibronectin Obtained from a Series of Recombinant Fragments Differing in Length, **238**, 123–127.
Domain Structure of the Fib-1 and Fib-2 Regions of Human Fibronectin. Thermodynamic Properties of the Type I Finger Module, **238**, 833–844.

Filament
The Orientation of Spin-probes Attached to Cys374 on Actin in Oriented Gels, **236**, 703–709.

Filamentation
The *parDE* Operon of the Broad-host-range Plasmid RK2 Specifies Growth Inhibition Associated with Plasmid Loss, **237**, 35–51.
Host-inhibitory Functions Encoded by Promiscuous Plasmids. Transient Arrest of *Escherichia coli* Segregants that Fail to Inherit Plasmid RK2, **237**, 52–64.

Filamentous bacteriophage
Molecular Models and Structural Comparisons of Native and Mutant Class I Filamentous Bacteriophages. Ff(fd, f1, M13), If1 and IKe, **235**, 260–286.
Multiple DNA Conformational Changes Induced by an Initiator Protein Precede the Nicking Reaction in a Rolling Circle Replication Origin, **237**, 388–400.
Selection of β-Lactamase on Filamentous Bacteriophage by Catalytic Activity, **237**, 415–422.
pIV, a Filamentous Phage Protein that Mediates Phage Export Across the Bacterial Cell Envelope, Forms a Multimer, **238**, 187–198.
Structural Mimicry and Enhanced Immunogenicity of Peptide Epitopes Displayed on Filamentous Bacteriophage. The V3 Loop of HIV-1 gp120, **243**, 167–172.

Filamentous fungus
Perpetuation of Cytosine Methylation in *Ascobolus immersus* Implies a Novel Type of Maintenance Methylase, **240**, 42–51.

Filamentous hemagglutinin
Filamentous Hemagglutinin of *Bordetella pertussis*. A Bacterial Adhesin Formed as a 50-nm Monomeric Rigid Rod Based on a 19-residue Repeat Motif Rich in Beta Strands and Turns, **241**, 110–124.

Finite difference electrostatic modelling
Improved Continuum Electrostatic Modelling in Proteins, with Comparison to Experiment, **236**, 887–903.

Finite-difference Poisson–Boltzmann approach
Combined Conformational Search and Finite-Difference Poisson–Boltzmann Approach for Flexible Docking. Application to an Operator Mutation in the λ Repressor-Operator Complex, **238**, 455–465.

Fis protein
Factor Independent Activation of *rrnB* P1. An "Extended" Promoter with an Upstream Element that Dramatically Increases Promoter Strength, **235**, 1421–1435.

FIS protein
The Major Dimerization Determinants of the Nitrogen Regulatory Protein NTRC from Enteric Bacteria Lie in Its Carboxy-terminal Domain, **241**, 233–245.

FK506
Structural Characterization of the FK506 Binding Protein Unfolded in Urea and Guanidine Hydrochloride, **236**, 637–648.

Flagellar function
Caulobacter Flagellar Function, but not Assembly, Requires FliL, a Non-polarly Localized Membrane Protein Present in all Cell Types, **243**, 227–244.

Flagellar motors
Isolation, Characterization and Structure of Bacterial Flagellar Motors Containing the Switch Complex, **235**, 1261–1270.

Flagellum
Domain Structures of the MS Ring Component Protein (FliF) of the Flagellar Basal Body of *Salmonella typhimurium*, **236**, 546–555.

Flap conformation
Alternative Native Flap Conformation Revealed by 2·3 Å Resolution Structure of SIV Proteinase, **239**, 97–103.

Flavin adenine dinucleotide
The Refined Structures of a Stabilized Mutant and of Wild-type Pyruvate Oxidase from *Lactobacillus plantarum*, **237**, 315–335.
Crystallization and Preliminary Crystallographic Investigation of Electron-transfer Flavoprotein from the Bacterium *Methylophilus* W3A1, **240**, 265–266.

Flavin disulfide oxidoreductase
Crystal Structure of *Escherichia coli* Thioredoxin Reductase Refined at 2 Å Resolution. Implications for a Large Conformational Change during Catalysis, **236**, 800–816.

Flavin reductase
Crystallization and Preliminary Crystallographic Analysis of NADPH : FMN Oxidoreductase from *Vibrio harveyi*, **241**, 283–287.

Flavoprotein
Crystallization and Preliminary X-ray Analysis of Phenol Hydroxylase from *Trichosporon cutaneum*, **238**, 128–130.
Crystallization and Preliminary Crystallographic Data for an FMN-dependent Nitroreductase Enzyme from *Escherichia coli* B, **238**, 852–853.
Crystallization and Preliminary Crystallographic Investigation of Electron-transfer Flavoprotein from the Bacterium *Methylophilus* W3A1, **240**, 265–266.

FliL
Caulobacter Flagellar Function, but not Assembly, Requires FliL, a Non-polarly Localized Membrane Protein Present in all Cell Types, **243**, 227–244.

FLP
Resolution of Immobile χ Structures by the FLP Recombinase of 2 μm Plasmid, **243**, 199–207.

Fluorescence
Formation of Two-dimensional Arrays of Annexin V on Phosphatidylserine-containing Liposomes, **236**, 199–208.
Studies on Primer Binding of HIV-1 Reverse Transcriptase Using a Fluorescent Probe, **236**, 469–479.
Engineered Tyrosine Residues Serve as the Local Probes to Detect a Kinetic Intermediate in the Folding of Ribose-binding Protein, **240**, 385–395.
Biotin and Biotin Analogues Specifically Modify the Fluorescence Decay of Avidin, **242**, 559–565.
Characterization of the Tryptophan Fluorescence and Hydrodynamic Properties of Rat DNA Polymerase β, **244**, 224–235.

Fluorescence energy transfer
Determination of Electrostatic Potential Around Specific Locations on the Surface of Actin by Diffusion-enhanced Fluorescence Resonance Energy Transfer, **241**, 714–731.

Fluorescence lifetime distributions
Biotin and Biotin Analogues Specifically Modify the Fluorescence Decay of Avidin, **242**, 559–565.

Fluorescence spectroscopy
Complex Formation between Phage ϕ29 Single-stranded DNA Binding Protein and DNA, **239**, 213–226.

Fold classification of folds
Principles Determining the Structure of β-Sheet Barrels in Proteins. I. A Theoretical Analysis, **236**, 1369–1381.

Foldback
Hypermethylation of Telomere-like Foldbacks at Codon 12 of the Human c-Ha-*ras* Gene and the Trinucleotide Repeat of the *FMR-1* Gene of Fragile X, **243**, 143–151.

Folding
Lattice Model Simulations of Polypeptide Chain Folding, **235**, 1032–1043.
Formation of α-Helix 88–98 is Essential in the Establishment of Higher-order Structure from Reduced Lysozyme, **235**, 1312–1317.
Delayed Triple Helix Formation of Mutant Collagen from Patients with Osteogenesis Imperfecta, **236**, 940–949.
Intact Disulfide Bonds Decelerate the Folding of Ribonuclease T1, **239**, 713–725.

Folding intermediate
^{1}H NMR Analysis of the Partly-folded Non-native Two-disulphide Intermediates (30-51,5-14) and (30-51,5-38) in the Folding Pathway of Bovine Pancreatic Trypsin Inhibitor, **235**, 1044–1061.
Folding Intermediate Binds to the Bottom of Bullet-shaped Holo-chaperonin and is Readily Accessible to Antibody, **236**, 691–696.
Unfolding-refolding Kinetics of the Tryptophan Synthase α Subunit by CD and Fluorescence Measurements, **236**, 1227–1240.
Unfolding Pathway of Apomyoglobin. Simultaneous Characterization of Acidic Conformational States by Frequency Domain Fluorometry, **241**, 103–109.
Structure Based Prediction of Protein Folding Intermediates, **242**, 62–80.
Helicity, Circular Dichroism and Molecular Dynamics of Proteins, **243**, 173–178.

Folding pathway
Prediction of the Folding Pathways and Structure of the GCN4 Leucine Zipper, **237**, 361–367.
Structure Based Prediction of Protein Folding Intermediates, **242**, 62–80.

Footprinting
Regulation of the Transcription of a Cluster of *Bacillus subtilis* Spore Coat Genes, **240**, 405–415.
Transcription of the *xyl* Operon is Controlled in *Bacillus subtilis* by Tandem Overlapping Operators Spaced by Four Base-pairs, **243**, 413–424.

Foreign pentapeptide
Structure of a Foreign Peptide Displayed on the Surface of Bacteriophage M13, **241**, 208–213.

Fork arrest
The Minimal Sequence Needed to Define a Functional DNA Terminator in *Bacillus subtilis*, **241**, 335–340.

Formate dehydrogenase
High Resolution Structures of Holo and Apo Formate Dehydrogenase, **236**, 759–785.

Four helix bundle
Four Helix Bundle Diversity in Globular Proteins, **236**, 1356–1368.
Linking an Easily Detectable Phenotype to the Folding of a Common Structural Motif. Selection of Rare Turn Mutations that Prevent the Folding of Rop, **237**, 378–387.
Analysis of the Solution Structure of Human Interleukin-4 Determined by Heteronuclear Three-dimensional Nuclear Magnetic Resonance Techniques, **238**, 23–41.

Fourier analysis
Analysis of Repeated Motifs in the Talin Rod, **235**, 1278–1290.

Fragile X
Hypermethylation of Telomere-like Foldbacks at Codon 12 of the Human c-Ha-*ras* Gene and the Trinucleotide Repeat of the *FMR-1* Gene of Fragile X, **243**, 143–151.

Frameshift/frameshifting
Evidence that GHN Phase Bias does not Constitute a Framing Code, **235**, 389–395.
A Functional Mutant of $tRNA^{Arg}_{2}$ with Ten Extra Nucleotides in Its TFC Arm, **235**, 1369–1376.
Genetic Evidence for IS*1* Transposition Regulated by InsA and the ΔInsA-B′-InsB Species, which is Generated by Translation from Two Alternative Internal Initiation Sites and Frameshifting, **240**, 52–65.
Production of UV-induced Frameshift Mutations *in Vitro* by DNA Polymerases Deficient in 3′→5′ Exonuclease Activity, **240**, 226–242.

Frameshifting
Translational Control in Production of Transposase and in Transposition of Insertion Sequence IS*3*, **235**, 1406–1420.

Free energy
Decomposition of the Free Energy of a System in Terms of Specific Interactions. Implications for Theoretical and Experimental Studies, **240**, 167–176.

Free radical
Crystal Structure of a Free Radical Enzyme, Galactose Oxidase, **238**, 794–814.

Free-energy simulations
Molecular Recognition in Proteins. Simulation Analysis of Substrate Binding by a Tyrosyl-tRNA Synthetase Mutant, **236**, 1049–1066.

Freezing
An Ultrastructural, Time-resolved Study of Freezing in the Corneal Stroma, **236**, 749–758.

Frequency domain fluorometry
Unfolding Pathway of Apomyoglobin. Simultaneous Characterization of Acidic Conformational States by Frequency Domain Fluorometry, **241**, 103–109.

Fructose 1,6-bisphosphate
Allosteric Activation in *Bacillus stearothermophilus* Lactate Dehydrogenase Investigated by an X-ray Crystallographic Analysis of a Mutant Designed to Prevent Tetramerization of the Enzyme, **238**, 615–625.

Fructose-2,6-bisphosphatase
Preliminary X-ray Analysis of a Truncated Form of Recombinant Fructose-2,6-bisphosphatase, **235**, 1147–1151.

FT-IR spectroscopy
The Secondary Structure of the von Willebrand Factor Type A Domain in Factor B of Human Complement by Fourier Transform Infrared Spectroscopy. Its Occurrence in Collagen Types VI, VII, XII and XIV, the Integrins and Other Proteins by Averaged Structure Predictions, **238**, 104–119.

Functional analysis
A Functional Analysis of the Tn*5* Transposase. Identification of Domains Required for DNA Binding and Multimerization, **241**, 166–177.

Functional domains
Analysis of Functional Domains of the Packaging Proteins of Bacteriophage T3 by Site-directed Mutagenesis, **235**, 248–259.
The Domain Structure of Sigma 54 as Determined by Analysis of a Set of Deletion Mutants, **236**, 81–90.

Fungus
Perpetuation of Cytosine Methylation in *Ascobolus immersus* Implies a Novel Type of Maintenance Methylase, **240**, 42–51.
The Characterization and Crystallization of a Virally Encoded *Ustilago maydis* KP4 Toxin, **243**, 792–795.

Fur repressor
Fur Regulon in Gram-negative Bacteria. Identification and Characterization of New Iron-regulated *Escherichia coli* Genes by a Fur Titration Assay, **236**, 531–545.

Fur-box
Fur Regulon in Gram-negative Bacteria. Identification and Characterization of New Iron-regulated *Escherichia coli* Genes by a Fur Titration Assay, **236**, 531–545.

Fusarium oxysporum
Crystallization and Preliminary X-ray Diffraction Studies of Nitric Oxide Reductase Cytochrome P450nor from *Fusarium oxysporum*, **239**, 158–159.

fushi tarazu homeodomain
Nuclear Magnetic Resonance Solution Structure of the *fushi tarazu* Homeodomain from *Drosophila* and Comparison with the *Antennapedia* Homeodomain, **238**, 333–345.

Fusion
Crystals of a Fragment of Influenza Haemagglutinin in the Low pH Induced Conformation, **236**, 1262–1265.

Fv fragment
Crystallization and Preliminary X-ray Diffraction Study of an Idiotope-Anti-Idiotope Fv-Fv Complex, **241**, 739–743.
Role of the Domain–Domain Interaction in the Construction of the Antigen Combining Site. A Comparative Study by ^{1}H-^{15}N Shift Correlation NMR Spectroscopy of the Fv and Fab Fragments of Anti-dansyl Mouse Monoclonal Antibody, **243**, 494–503.

G protein
Crystallization and Preliminary Crystallographic Studies of Giα1 and Mutants of Giα1 in the GTP and GDP-bound States, **238**, 630–634.
Crystallization and Preliminary X-ray Diffraction Studies on ADP-ribosylation Factor 1, **244**, 651–653.

G protein coupled receptor
New Alignment Strategy for Transmembrane Proteins, **243**, 388 396.

G·A mismatch
DNA Sequence GCGAATGAGC Containing the Human Centromere Core Sequence GAAT Forms a Self-complementary Duplex with Sheared G·A Pairs in Solution, **241**, 467–479.
A Major Family of Motifs Involving G·A Mismatches in Ribosomal RNA, **242**, 1–8.

GABA/Noradrenaline transporter family
A Creatine Transporter cDNA from *Torpedo* Illustrates Structure/Function Relationships in the GABA/Noradrenaline Transporter Family, **241**, 317–324.

Galactose
Dependence of Lactose Metabolism upon Mutarotase Encoded in the *gal* Operon in *Escherichia coli*, **244**, 269–278.

Galactose oxidase
Drosophila kelch Motif is Derived from a Common Enzyme Fold, **236**, 1277–1282.
Crystal Structure of a Free Radical Enzyme, Galactose Oxidase, **238**, 794–814.

α-galactosidase A
Crystallization and Preliminary X-ray Analysis of Human α-Galactosidase A Complex, **239**, 578–580.

D-galactoside
Dependence of Lactose Metabolism upon Mutarotase Encoded in the *gal* Operon in *Escherichia coli*, **244**, 269–278.

galM
Dependence of Lactose Metabolism upon Mutarotase Encoded in the *gal* Operon in *Escherichia coli*, **244**, 269–278.

Gamma delta
The Linkage Change of a Knotting Reaction Catalysed by Tn*3* Resolvase, **239**, 25–36.

Gap penalties
Sequence Alignment and Penalty Choice. Review of Concepts, Case Studies and Implications, **235**, 1–12.

GCN4 leucine zipper
Prediction of the Folding Pathways and Structure of the GCN4 Leucine Zipper, **237**, 361–367.

G-DNA
Three-dimensional Solution Structure of the Thrombin-binding DNA Aptamer d(GGTTGGTGTGGTTGG), **235**, 1532–1547.

GDP
Solution Structure of GDP-tubulin Double Rings to 3 nm Resolution and Comparison with Microtubules, **238**, 214–225.

Gel electrophoresis
Structure of Four-way DNA Junctions containing a Nick in One Strand, **238**, 62–74.
Quantification of the Effect of Excluded Volume on Double-stranded DNA, **242**, 547–558.

Gel mobility anomaly
Physiological Concentration of Magnesium Ions Induces a Strong Macroscopic Curvature in GGGCCC-containing DNA, **236**, 26–32.

2-D gel protein database
Identification, Molecular Cloning, Expression and Chromosome Mapping of a Family of Transformation Upregulated hnRNP-K Proteins Derived by Alternative Splicing, **236**, 33–48.

Gene
The Human Calbindin-D_{9k} Gene. Complete Structure and Implications on Steroid Hormone Regulation, **235**, 1231–1238.

Gene V protein
The Solution Structure of the Tyr41→His Mutant of the Single-stranded DNA Binding Protein Encoded by Gene V of the Filamentous Bacteriophage M13, **236**, 229–246.
In Vivo Characterization of Mutants of the Bacteriophage f1 Gene V Protein Isolated by Saturation Mutagenesis, **236**, 556–571.
A Model of the Complex between Single-stranded DNA and the Single-stranded DNA Binding Protein Encoded by Gene V of Filamentous Bacteriophage M13, **240**, 341–357.

Gene activation
Gene Activation by the *Escherichia coli* Positive Regulator, OmpR. Phosphorylation-independent Mechanism of Activation by an OmpR Mutant, **242**, 607–613.

Gene activator
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP) I. Saturation and Alanine-scanning Mutagenesis, **243**, 595–602.
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP). II. Role at Class I and Class II CAP-dependent Promoters, **243**, 603–610.

Gene complementation
Linker Insertion Mutagenesis of *Drosophila* Topoisomerase II. Probing The Structure of Eukaryotic Topoisomerase II, **235**, 436–447.

Gene expression
See also Expression.
Features in the 5′ Non-coding Sequences of Rabbit α and β-Globin mRNAs that Affect Translational Efficiency, **235**, 95–110.
Translational Initiation on Structured Messengers. Another Role for the Shine-Dalgarno Interaction, **235**, 173–184.
A *Cis*-acting Region Required for the Regulated Expression of *grg-1*, a Neurospora Glucose-repressible Gene. Two Regulatory Sites (CRE and NRS) are Required to Repress *grg-1* Expression, **237**, 65–74.
The Influence of Adenine-rich Motifs in the 3′ Portion of the Ribosome Binding Site on Human IFN-γ Gene Expression in *Escherichia coli*, **240**, 20–27.

Gene flow
The Dynamics of Murine LINE-1 Subfamily Amplification, **241**, 390–397.

Gene fusion
Linking an Easily Detectable Phenotype to the Folding of a Common Structural Motif. Selection of Rare Turn Mutations that Prevent the Folding of Rop, **237**, 378–387.

Gene inactivation
Premature Stop Codons Inactivate the RT6 Genes of the Human and Chimpanzee Species, **243**, 537–546.

***recA*-gene**
recA-independent and *recA*-dependent Intramolecular Plasmid Recombination. Differential Homology Requirement and Distance Effect, **235**, 414–423.

Gene recruitment
ζ-Crystallin: A Lens-specific Promoter and the Gene Recruitment of an Enzyme as a Crystallin, **236**, 669–678.

Gene regulation
Conservation of a Transcription Antitermination Mechanism in Aminoacyl-tRNA Synthetase and Amino Acid Biosynthesis Genes in Gram-positive Bacteria, **235**, 798–804.
The *Drosophila Broad-complex* Regulates Developmental Changes in Transcription and Chromatin Structure of the 67B Heat-shock Gene Cluster, **241**, 353–362.
Lambda *cI* Repressor Mutants Altered in Transcriptional Activation, **242**, 23–36.
Reaching Out. Locating and Lengthening the Interdomain Linker in AraC Protein, **242**, 330–338.
Sporulation Regulatory Protein SpoIIID from *Bacillus subtilis* Activates and Represses Transcription by Both Mother-cell-specific Forms of RNA Polymerase, **243**, 425–436.

Gene silencing
Perpetuation of Cytosine Methylation in *Ascobolus immersus* Implies a Novel Type of Maintenance Methylase, **240**, 42–51.

Gene structure
Isolation and Characterization of α-Type HC3 abd β-Type HC5 Subunit Genes of Human Proteasomes, **244**, 117–124.

Gene substitution
Protein Substitution in Chloroplast Ribosome Evolution. A Eukaryotic Cytosolic Protein has Replaced its Organelle Homologue (L23) in Spinach, **240**, 28–41.

Genetic algorithm
Folding the Main Chain of Small Proteins with the Genetic Algorithm, **236**, 844–861.

Genetic code
Transfer RNA Mutation and the Malleability of the Genetic Code, **235**, 1377–1380.
Neural Network Model of the Genetic Code is Strongly Correlated to the GES Scale of Amino Acid Transfer Free Energies, **243**, 816–820.

Genetic map
Complete Sequence of the Mitochondrial DNA of the Chlorophyte Alga *Prototheca wickerhamii*. Gene Content and Genome Organization, **237**, 75–86.

Genetic recombination
DNA Damage-inducible Replication of the *Escherichia coli* Chromosome is Initiated at Separable Sites within the Minimal *oriC*, **235**, 1459–1469.
Functional Characterization of Residues in the P-loop Motif of the RecA Protein ATP Binding Site, **237**, 20–34.
Resolution of the Three-stranded Recombination Intermediate Made by RecA Protein. An Essential Role of ATP Hydrolysis, **238**, 540–554.
Symmetric Holliday Junction Crossover Isomers, **238**, 658–668.

Genome
Interstitial Telomeric Repeats within the *Arabidopsis thaliana* Genome, **239**, 163–169.
Complete Nucleotide Sequence of Birmingham IncPα Plasmids. Compilation and Comparative Analysis, **239**, 623–663.
Perpetuation of Cytosine Methylation in *Ascobolus immersus* Implies a Novel Type of Maintenance Methylase, **240**, 42–51.

GGGCCC sequence elements
Physiological Concentration of Magnesium Ions Induces a Strong Macroscopic Curvature in GGGCCC-containing DNA, **236**, 26–32.

Gin
Processive Recombination by Wild-type Gin and an Enhancer-independent Mutant. Insight into the Mechanisms of Recombination Selectivity and Strand Exchange, **243**, 437–457.

GlcNAc oligosaccharides
^{1}H Nuclear Magnetic Resonance Studies of Hen Lysozyme-*N*-Acetylglucosamine Oligosaccharide Complexes in Solution. Application of Chemical Shifts for the Comparison of Conformational Changes in Solution and in the Crystal, **235**, 1072–1087.

Global conformational change
Molecular Recognition of the Identity-determinant Set of Isoleucine Transfer RNA from *Escherichia coli*, **236**, 710–724.

Global energy minimization
Biased Probability Monte Carlo Conformational Searches and Electrostatic Calculations for Peptides and Proteins, **235**, 983–1002.

Global searches
The Structure of F-actin. Results of Global Searches Using Data from Electron Microscopy and X-ray Crystallography, **240**, 138–154.

Globin
Hidden Markov Models in Computational Biology. Applications to Protein Modeling, **235**, 1501–1531.
Volume Changes in Protein Evolution, **236**, 1067–1078.

Globin genes
Nucleosome Positioning on Chicken and Human Globin Gene Promoters *in Vitro*. Novel Mapping Techniques, **237**, 401–414.

Globin mRNA
Features in the 5′ Non-coding Sequences of Rabbit α and β-Globin mRNAs that Affect Translational Efficiency, **235**, 95–110.

Globular proteins
Significance of Root-Mean-Square Deviation in Comparing Three-dimensional Structures of Globular Proteins, **235**, 625–634.

Glucoamylase
Refined Crystal Structures of Glucoamylase from *Aspergillus awamori* var. *X100*, **238**, 575–591.

Glucocortical receptor
Analysis of the DNA-binding Affinity, Sequence Specificity and Context Dependence of the Glucocorticoid Receptor Zinc Finger Region, **239**, 664–688.

Glucocorticoid response element
Analysis of the DNA-binding Affinity, Sequence Specificity and Context Dependence of the Glucocorticoid Receptor Zinc Finger Region, **239**, 664–688.

Glucose
Molecular Cloning and Expression of a Novel Hydroxymethylcytosine-specific Restriction Enzyme (*Pvu*Rts1I) Modulated by Glucosylation of DNA, **242**, 45–61.
Dependence of Lactose Metabolism upon Mutarotase Encoded in the *gal* Operon in *Escherichia coli*, **244**, 269–278.
Calcium Ion-induced Structural Changes in Bacteriophage φX174, **244**, 291–300.

Glucosamine-6-phosphate synthase
Crystallization and Preliminary X-ray Analysis of the Two Domains of Glucosamine-6-phosphate Synthase from *Escherichia coli*, **242**, 703–705.

Glucose-repression
A *Cis*-acting Region Required for the Regulated Expression of *grg-1*, a Neurospora Glucose-repressible Gene. Two Regulatory Sites (CRE and NRS) are Required to Repress *grg-1* Expression, **237**, 65–74.

β-Glucosidase
Crystallization and Preliminary X-ray Diffraction Analysis of a Type I β-glucosidase Encoded by the *bgl A* Gene of *Bacillus polymyxa*, **240**, 267–270.

Glutamate
Conformational Analysis of Carboxylate and Carboxamide Side-chains Bound to Cations, **239**, 306–314.

Glutamate 1-semialdehyde aminotransferase
Crystallization and Preliminary X-ray Analysis of Wild-type and K272A Mutant Glutamate 1-Semialdehyde Aminotransferase from *Synechococcus*, **242**, 591–594.

Glutamine-binding protein
Crystals of Glutamine-binding Protein in Various Conformational States, **240**, 87–91.

Glutaredoxin
The Nuclear Magnetic Resonance Solution Structure of the Mixed Disulfide between *Escherichia coli* Glutaredoxin(C14S) and Glutathione, **235**, 1585–1597.

Glutathione
The Nuclear Magnetic Resonance Solution Structure of the Mixed Disulfide between *Escherichia coli* Glutaredoxin(C14S) and Glutathione, **235**, 1585–1597.

Glutathione reductase
Crystal Structure of *Escherichia coli* Thioredoxin Reductase Refined at 2 Å Resolution. Implications for a Large Conformational Change during Catalysis, **236**, 800–816.

Glutathione S-transferase
Crystallization and Preliminary X-ray Diffraction Studies of a Glutathione S-Transferase from the Australian Sheep Blowfly, *Lucilia cuprina*, **236**, 1407–1409.
Molecular Structure at 1·8 Å of Mouse Liver Class Pi Glutathione S-transferase Complexed with *S*-(*p*-Nitrobenzyl)glutathione and Other Inhibitors, **237**, 298–314.
Crystal Structure of Human Class mu Glutathione Transferase GSTM2-2. Effects of Lattice Packing on Conformational Heterogeneity, **238**, 815–832.
Refined Crystal Structure of Porcine Class Pi Glutathione S-Transferase (pGST P1-1) at 2·1 Å Resolution, **243**, 72–92.

Glutathione-binding domain
Refined Crystal Structure of Porcine Class Pi Glutathione S-Transferase (pGST P1-1) at 2·1 Å Resolution, **243**, 72–92.

Glycera dibranchiata
Glycera dibranchiata Hemoglobin. X-ray Structure of Carbonmonoxide Hemoglobin at 1·5 Å Resolution, **238**, 42–53.

Glycerate dehydrogenase
Crystal Structure of a NAD-dependent D-Glycerate Dehydrogenase at 2·4 Å Resolution, **236**, 1123–1140.

Glycerol
Arc Repressor will not Denature Under Pressure in the Absence of Water, **240**, 184–187.

Glycocyamine kinase
Evolution of Phosphagen Kinase. Primary Structure of Glycocyamine Kinase and Arginine Kinase from Invertebrates, **237**, 353–357.

Glycogen phosphorylase *b*
On the Photochemical Release of Phosphate from 3,5-Dinitrophenyl Phosphate in a Protein Crystal, **236**, 995–1000.

Glycolysis
The Role of Glu187 in the Regulation of Phosphofructokinase by Phosphoenolpyruvate, **235**, 68–72.

Glycoprotein
Crystallization and Preliminary Crystallographic Study of β-Momorcharin, **238**, 284–285.
Refined Crystal Structures of Glucoamylase from *Aspergillus awamori* var. *X100*, **238**, 575–591.

***N*-glycosidase mechanism**
X-ray Structure of Recombinant Ricin A-Chain at 1·8 Å Resolution, **244**, 410–422.

Glycoside hydrolysis
Structural Changes of Active Site Cleft and Different Saccharide Binding Modes in Human Lysozyme Co-crystallized with Hexa-*N*-acetyl-chitohexaose at pH 4·0, **244**, 522–540.

Glycosylation
Purification, Crystallization and Preliminary X-ray Analysis of Murine Interleukin-5, **241**, 269–272.

Glycyl-tRNA synthetase
Crystallisation of the Glycyl-tRNA Synthetase from *Thermus thermophilus* and Initial Crystallographic Data, **241**, 732–735.

GNRA tetraloop
Involvement of a GNRA Tetraloop in Long-range RNA Tertiary Interactions, **236**, 1271–1276.

G-quartet
Three-dimensional Solution Structure of the Thrombin-binding DNA Aptamer d(GGTTGGTGTGGTTGG), **235**, 1532–1547.
Solution Structure of a Parallel-Stranded Tetraplex Formed by d(TG_4T) in the Presence of Sodium Ions by Nuclear Magnetic Resonance Spectroscopy, **243**, 458–471.

Gramicidin A
Polypeptide Conformational Space. Dynamics by Solution NMR Disorder by X-ray Crystallography, **241**, 431–439.

Gram-positive bacteria
Conservation of a Transcription Antitermination Mechanism in Aminoacyl-tRNA Synthetase and Amino Acid Biosynthesis Genes in Gram-positive Bacteria, **235**, 798–804.
A Novel Site-specific Recombinase Encoded by the *Streptococcus pyogenes* Plasmid pSM19035, **238**, 159–172.

Graph theory
A Graph-theoretic Approach to the Identification of Three-dimensional Patterns of Amino Acid Side-chains in Protein Structures, **243**, 327–344.

Green alga
Complete Sequence of the Mitochondrial DNA of the Chlorophyte Alga *Prototheca wickerhamii*. Gene Content and Genome Organization, **237**, 75–86.

GroEL
The Symmetry of *Escherichia coli* cpn60 (GroEL) Determined by X-ray Crystallography, **235**, 47–52.
Prediction of an Inter-residue Interaction in the Chaperonin GroEL from Multiple Sequence Alignment is Confirmed by Double-mutant Cycle Analysis, **238**, 133–138.
Two Lines of Allosteric Communication in the Oligomeric Chaperonin GroEL are Revealed by the Single Mutation Arg196→Ala, **243**, 397–401.

Group I introns
Automatic Identification of Group I Intron Cores in Genomic DNA Sequences, **235**, 1206–1217.
A Chloroplast Group I Intron Undergoes the First Step of Reverse Splicing into Host Cytoplasmic 5·8 S rRNA. Implications for Intron-mediated RNA Recombination, Intron Transposition and 5·8 S rRNA Structure, **236**, 455–468.
Peptide Antibiotics of the Tuberactinomycin Family as Inhibitors of Group I Intron RNA Splicing, **236**, 1001–1010.
Involvement of a GNRA Tetraloop in Long-range RNA Tertiary Interactions, **236**, 1271–1276.

Comparative Structure and Genomic Organization of the Discontinuous Mitochondrial Ribosomal RNA Genes of *Chlamydomonas eugametos* and *Chlamydomonas reinhardtii*, **241**, 298–311.

Group II introns
On the Identification of Group II Introns in Nucleotide Sequence Data, **242**, 389–396.
DNA Double-strand Break *in vivo* at the 3′ Extremity of Exons Located Upstream of Group II Introns. Senescence and Circular DNA Introns in *Podospora* Mitochondria, **242**, 630–643.
Transposable Group II Introns in Fission and Budding Yeast. Site-specific Genomic Instabilities and Formation of Group II IVS plDNAs, **243**, 157–166.

Growth physiology
High Concentrations of ppGpp Decrease the RNA Chain Growth Rate. Implications for Protein Synthesis and Translational Fidelity During Amino Acid Starvation in *Escherichia coli*, **236**, 441–454.

Growth rate
The Concentration of Polypeptide Chain Release Factors 1 and 2 at Different Growth Rates of *Escherichia coli*, **238**, 302–308.

***grpE* gene**
Identification of a *grpE* Heat-shock Gene Homolog in the Archaeon *Methanosarcina mazei*, **240**, 95–101.

GST *See* **Glutathione S-transferase**

GTP
Solution Structure of GDP-tubulin Double Rings to 3 nm Resolution and Comparison with Microtubules, **238**, 214–225.
Synergism between the GTPase Activities of EF-Tu·GTP and EF-G·GTP on Empty Ribosomes. Elongation Factors as Stimulators of the Ribosomal Oscillation between Two Conformations, **242**, 644–654.

GTP binding
Suppression of Yeast RNA Polymerase III Mutations by the *URP2* Gene Encoding a Protein Homologous to the Mammalian Ribosomal Protein S20, **240**, 1–7.

GTP binding proteins
Crystallization and Preliminary Crystallographic Studies of Giα1 and Mutants of Giα1 in the GTP and GDP-bound States, **238**, 630–634.
Crystallization of a Hyperthermophilic Archaeal Elongation Factor 1α, **242**, 175–177.

Guanidine-resistance and dependence
Genetic Studies on the Poliovirus 2C Protein, an NTPase, **236**, 1310–1323.

Guanosine 5′-diphosphate-3′-diphosphate
Isolated P2 rRNA Promoters of *Escherichia coli* are Strong Promoters that are Subject to Stringent Control, **243**, 152–156.

Gyrase
The Complex of DNA Gyrase and Quinolone Drugs with DNA Forms a Barrier to Transcription by RNA Polymerase, **242**, 351–363.

Gyrate atrophy
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Human Ornithine Aminotransferase, **243**, 128–130.

H-*ras*
Hypermethylation of Telomere-like Foldbacks at Codon 12 of the Human c-Ha-*ras* Gene and the Trinucleotide Repeat of the *FMR-1* Gene of Fragile X, **243**, 143–151.

H1°
H1° *See* Histone H1.

Haemoglobin
Adaptation to Extreme Environments: Structure–Function Relationships in Emperor Penguin Haemoglobin, **237**, 615–621.
The Chloride Effect in Human Haemoglobin. A New Kind of Allosteric Mechanism, **239**, 555–560.

Hageman factor
The Corn Inhibitor of Blood Coagulation Factor XIIa: Crystallization and Preliminary Crystallographic Analysis, **236**, 385–387.

Haloacid dehalogenases
Computer Analysis of Bacterial Haloacid Dehalogenases Defines a Large Superfamily of Hydrolases with Diverse Specificity. Application of an Iterative Approach to Database Search, **244**, 125–132.

Halobacterium halobium
The Proton Transfers in the Cytoplasmic Domain of Bacteriorhodopsin are Facilitated by a Cluster of Interacting Residues, **239**, 401–414.
Cross-hypersensitivity Effects of Mutations in 23 S rRNA Yield Insight into Aminoacyl-tRNA Binding, **244**, 151–157.

Halobacterium salinarium
Energy Coupling in an Ion Pump. The Reprotonation Switch of Bacteriorhodopsin, **243**, 621–638.

Halophile
Stability against Denaturation Mechanisms in Halophilic Malate Dehydrogenase Adapt to Solvent Conditions, **244**, 436–447.

Hammerhead ribozyme domain
Multiple Folded Conformations of a Hammerhead Ribozyme Domain under Cleavage Conditions, **239**, 366–370.

Heat capacity
A Thermodynamic Study of the *trp* Repressor–Operator Interaction, **238**, 669–681.

Heat shock
Correctly Folded T-cell Receptor Fragments in the Periplasm of *Escherichia coli*. Influence of Folding Catalysts, **242**, 655–669.
Crystallization and Preliminary Diffraction Studies of *Escherichia coli* Lysyl-tRNA Synthetase, **243**, 123–125.

Heat shock genes
Identification of a *grpE* Heat-shock Gene Homolog in the Archaeon *Methanosarcina mazei*, **240**, 95–101.
The *Drosophila Broad-complex* Regulates Developmental Changes in Transcription and Chromatin Structure of the 67B Heat-shock Gene Cluster, **241**, 353–362.

Heat shock proteins
See also hsp70.
Specificity of DnaK–peptide Binding, **235**, 848–854.
Prediction of an Inter-residue Interaction in the Chaperonin GroEL from Multiple Sequence Alignment is Confirmed by Double-mutant Cycle Analysis, **238**, 133–138.
Different Peptide Binding Specificities of hsp70 Family Members, **241**, 133–135.
Isolation and Characterization of an *Escherichia coli* DnaK Mutant with Impaired ATPase Activity, **242**, 364–377.

Helical diffraction
The Structure of F-actin. Results of Global Searches Using Data from Electron Microscopy and X-ray Crystallography, **240**, 138–154.

Helical motif
Analysis of Repeated Motifs in the Talin Rod, **235**, 1278–1290.

Helical phasing
DNA-Protein Cooperativity in the Assembly and Stabilization of Mu Strand Transfer Complex. Relevance of DNA Phasing and *att* Site Cleavage, **238**, 514–527.

Helical stability
DNA Helical Instability Facilitates Initiation at the SV40 Replication Origin, **235**, 496–507.

Helicase
Helicase *See* DNA helicase.

α-helices
The Role of Interhelical Ionic Interactions in Controlling Protein Folding and Stability. *De Novo* Designed Synthetic Two-stranded αHelical Coiled-Coils, **237**, 500–512.

Helicity
Helicity, Circular Dichroism and Molecular Dynamics of Proteins, **243**, 173–178.

Helix
Molecular Models and Structural Comparisons of Native and Mutant Class I Filamentous Bacteriophages. Ff(fd, f1, M13), If1 and IKe, **235**, 260–286.
Determination of α-Helix Propensity within the Context of a Folded Protein. Sites 44 and 131 in Bacteriophage T4 lysozyme, **235**, 600–624.
Solution Structure of a *de Novo* Helical Protein by 2D-NMR Spectroscopy, **236**, 862–868.
Prediction of the Positioning of the Seven Transmembrane α-helices of Bacteriorhodopsin. A Molecular Simulation Study, **236**, 1105–1122.
Helix-stabilizing Interaction Between Tyrosine and Leucine or Valine when the Spacing is $i,i+4$, **241**, 706–713.
Helix Stop and Start Signals in Peptides and Proteins. The Capping Box does not Necessarily Prevent Helix Elongation, **242**, 487–496.
The Motile Major Sperm Protein (MSP) of *Ascaris suum* Forms Filaments Constructed from Two Helical Subfilaments, **243**, 60–71.

Helix capping
Magnesium Binding to the Bacterial Chemotaxis Protein CheY Results in Large Conformational Changes Involving its Functional Surface, **238**, 489–495.
Helix Stop and Start Signals in Peptides and Proteins. The Capping Box does not Necessarily Prevent Helix Elongation, **242**, 487–496.

Helix dipole
Cytidine Deaminase. The 2·3 Å Crystal Structure of an Enzyme:Transition-state Analog Complex, **235**, 635–656.
Formation of α-Helix 88–98 is Essential in the Establishment of Higher-order Structure from Reduced Lysozyme, **235**, 1312–1317.

Hemagglutinin
Crystals of a Fragment of Influenza Haemagglutinin in the Low pH Induced Conformation, **236**, 1262–1265.
Filamentous Hemagglutinin of *Bordetella pertussis*. A Bacterial Adhesin Formed as a 50-nm Monomeric Rigid Rod Based on a 19-residue Repeat Motif Rich in Beta Strands and Turns, **241**, 110–124.

Heme
Mutation of Tyrosine-67 to Phenylalanine in Cytochrome *c* Significantly Alters the Local Heme Environment, **235**, 1326–1341.
The Role of a Conserved Internal Water Molecule and Its Associated Hydrogen Bond Network in Cytochrome *c*, **236**, 786–799.

Heme axial ligands
Crystal Structure of Cytochrome c_3 from *Desulfovibrio desulfuricans* Norway at 1·7 Å Resolution, **243**, 653–667.

Heme enzyme
Crystal Structure of the Fungal Peroxidase from *Arthromyces ramosus* at 1·9 Å Resolution. Structural Comparisons with the Lignin and Cytochrome *c* Peroxidases, **235**, 331–344.

Heme protein
Structure of the Sulfide-reactive Hemoglobin from the Clam *Lucina pectinata*. Crystallographic Analysis at 1·5 Å Resolution, **244**, 86–99.

Hemocyanin
The Interhexameric Contacts in the Four-hexameric Hemocyanin from the Tarantula *Eurypelma californicum*. A Tentative Mechanism for Cooperative Behavior, **237**, 464–478.
Quaternary Structure of *Octopus vulgaris* Hemocyanin. Three-dimensional Reconstruction from Frozen-hydrated Specimens and Intramolecular Location of Functional Units $O_u e$ and $O_u b$, **238**, 75–87.
Three-dimensional Reconstruction from a Frozen-hydrated Specimen of the Chiton *Lepidochiton sp.* Hemocyanin, **244**, 640–647.

Hemoglobin
Haemoglobin *See* Hemoglobin.
High-Resolution Crystallographic Analysis of a Co-operative Dimeric Hemoglobin, **235**, 657–681.
The 1·8 Å Structure of Carbonmonoxy-β_4 Hemoglobin. Analysis of Homotetramer with the R Quaternary Structure of Liganded $\alpha_2\beta_2$ Hemoglobin, **236**, 817–830.
The 1·9 Å Structure of Deoxyβ_4 Hemoglobin. Analysis of the Partitioning of Quaternary-associated and Ligand-induced Changes in Tertiary Structure, **236**, 831–843.
Synergistic Modulation by Chloride and Organic Phosphates of Hemoglobin from Bear (*Ursus arctos*), **236**, 1401–1406.
Glycera dibranchiata Hemoglobin. X-ray Structure of Carbonmonoxide Hemoglobin at 1·5 Å Resolution, **238**, 42–53.
Chloride Masks Effects of Opposing Positive Charges in Hb A and Hb Hinsdale (β139 Asn→Lys) that can Modulate Cooperativity as well as Oxygen Affinity, **239**, 561–568.
Characterization of a *Plasmodium vivax* Cysteine Proteinase Gene Identifies Uniquely Conserved Amino Acids that May Mediate the Substrate Specificity of Malarial Hemoglobinases, **241**, 312–316.
Structure of the Sulfide-reactive Hemoglobin from the Clam *Lucina pectinata*. Crystallographic Analysis at 1·5 Å Resolution, **244**, 86–99.

Hemoglobin S
Measurement of the Hemoglobin Concentration in Deoxhemoglobin S Polymers and Characterization of the Polymer Water Compartment, **244**, 100–109.

Hemoprotein
Crystal Structure and Refinement of Cytochrome $P450_{terp}$ at 2·3 Å Resolution, **236**, 1169–1185.
Crystallization and Preliminary X-ray Analysis of a New Crystal form of Nitrite Reductase from *Pseudomonas aeruginosa*, **243**, 347–350.

Hen egg-white lysozyme
See also Lysozyme.
Thermal Expansion of Hen Egg-white Lysozyme. Comparison of the 1·9 Å Resolution Structures of the Tetragonal Form of the Enzyme at 100 K and 298 K, **235**, 302–317.

Hen's eggs
Crystallization and Preliminary Crystallographic Data of Vitelline Membrane Outer Layer Protein 1 VMO1, **235**, 793–794.

Heparin
^{1}H-NMR Assignment and Solution Structure of Human Acidic Fibroblast Growth Factor Activated by Inositol Hexasulfate, **242**, 81–98.

Herbicide
Crystallization and Preliminary Crystallographic Data for Acetohydroxy Acid Isomeroreductase from *Spinacia oleracea*, **242**, 578–581.

Herpes simplex virus capsid
Protein Subunit Structures in the Herpes Simplex Virus A-capsid Determined from 400 kV Spot-scan Electron Cryomicroscopy, **242**, 456–469.

Herpesviruses
Molecular Phylogeny of the Alphaherpesvirinae Subfamily and a Proposed Evolutionary Timescale, **238**, 9–22.

Heterocyst
Heterocyst-forming Filamentous Cyanobacteria Encode Proteins that Resemble Eukaryotic RNA-binding Proteins of the RNP Family, **235**, 1162–1170.

Heteronuclear multi-dimensional NMR
Structural Characterization of the FK506 Binding Protein Unfolded in Urea and Guanidine Hydrochloride, **236**, 637–648.
Three-dimensional Structure of the Human Immunodeficiency Virus Type 1 Matrix Protein, **244**, 198–223.

Heterotropic effects
Synergistic Modulation by Chloride and Organic Phosphates of Hemoglobin from Bear (*Ursus arctos*), **236**, 1401–1406.

Hexameric repressor
Ligand-induced Self-association of the *Escherichia coli* Regulatory Protein TyrR, **238**, 309–318.

Hexamers
Hexameric Rings of *Escherichia coli* RuvB Protein: Cooperative Assembly, Processivity and ATPase Activity, **243**, 208–215.

Hexon
The Refined Crystal Structure of Hexon, the Major Coat Protein of Adenovirus Type 2, at 2·9 Å Resolution, **242**, 430–455.

Hidden Markov models
Hidden Markov Models in Computational Biology. Applications to Protein Modeling, **235**, 1501–1531.

High pressure
Pressure Effects on Protein Flexibility: Monomeric Proteins, **242**, 291–301.

High resolution
Crystal Structure of Toxin II from the Scorpion *Androctonus australis* Hector Refined at 1·3 Å Resolution, **238**, 88–103.

Higher order structure
On the Location of Linker DNA in the Chromatin Fiber. Studies with Immobilized and Soluble Micrococcal Nuclease, **235**, 871–880.

Hinge region
Dynamical Structure of the Hinge Region of Immunoglobulin G as Studied by ^{13}C Nuclear Magnetic Resonance Spectroscopy, **236**, 300–309.

Hirudin
Molecular Recognition by Thrombin. Role of the Slow→Fast Transition, Site-specific Ion Binding Energetics and Thermodynamic Mapping of Structural Components, **235**, 733–746.

Histidine kinase
Transmembrane Signaling. Mutational Analysis of the Cytoplasmic Linker Region of Taz1-1, a Tar-EnvZ Chimeric Receptor in *Escherichia coli*, **244**, 477–481.

Histidine operon
Nucleotide Sequence of the *Escherichia coli* K12 Histidine Operon Revisited, **239**, 433–435.

Histidine phosphorylation
Refined X-ray Structure of *Dictyostelium discoideum* Nucleoside Diphosphate Kinase at 1·8 Å Resolution, **243**, 873–890.

Histidyl-tRNA synthetase
Crystallization of Histidyl-tRNA Synthetase from *Escherichia coli*, **241**, 275–277.

Histone acetylation
Nucleosome Structural Changes Due to Acetylation, **236**, 685–690.

Histone H1
The Footprint of Chromosomal Proteins HMG-14 and HMG-17 on Chromatin Subunits, **236**, 189–198.
The Promoter of the H1° Histone Gene contains a DNA Element bound by Retinoic Acid Receptors, **242**, 37–44.

Histone H5
DNA Sequence Organization in Chromatosomes, **235**, 855–870.

Histone N termini
Evidence Indicating Proximity in the Nucleosome Between the Histone H4 N Termini and the Globular Domain of Histone H1, **243**, 48–59.

Histone-DNA interaction
Periodicity of Dinucleotides in Nucleosomes Derived from Simian Virus 40 Chromatin, **235**, 198–208.
Evidence Indicating Proximity in the Nucleosome Between the Histone H4 N Termini and the Globular Domain of Histone H1, **243**, 48–59.

Histones
The Octameric Histone Core of the Nucleosome: Structural Issues Resolved, **236**, 179–188.
Nucleosome Positioning on Chicken and Human Globin Gene Promoters *in Vitro*. Novel Mapping Techniques, **237**, 401–414.
The Promoter of the H1° Histone Gene contains a DNA Element bound by Retinoic Acid Receptors, **242**, 37–44.

HIV
Studies on Primer Binding of HIV-1 Reverse Transcriptase Using a Fluorescent Probe, **236**, 469–479.
A Molecular Rheostat. Co-operative Rev Binding to Stem I of the Rev-response Element Modulates Human Immunodeficiency Virus Type-1 Late Gene Expression, **241**, 193–207.
HIV-1 Reverse Transcription. A Termination Step at the Center of the Genome, **241**, 651–662.
Crystals of HIV-1 Reverse Transcriptase Diffracting to 2·2 Å Resolution, **242**, 586–588.
Kinetic Analysis of the Catalysis of Strand Transfer From Internal Regions of Heteropolymeric RNA Templates by Human Immunodeficiency Virus Reverse Transcriptase, **243**, 558–567.
Human Immunodeficiency Virus Type 1 Tat Directs Transcription Through Attenuation Sites within the Mouse *c-myc* Gene, **243**, 568–573.
Three-dimensional Structure of the Human Immunodeficiency Virus Type 1 Matrix Protein, **244**, 198–223.

HIV gp120
Structural Mimicry and Enhanced Immunogenicity of Peptide Epitopes Displayed on Filamentous Bacteriophage. The V3 Loop of HIV-1 gp120, **243**, 167–172.

HIV-1
Conformational Behaviour of the Active and Inactive Forms of the Nucleocapsid NCp7 of HIV-1 Studied by ^{1}H NMR, **235**, 287–301.
The Human Immunodeficiency Virus Type 1 Encoded Vpu Protein is Phosphorylated by Casein Kinase-2 (CK-2) at Positions Ser52 and Ser56 within a Predicted α-Helix-Turn-α-Helix-Motif, **236**, 16–25.
Myristoylation-dependent Binding of HIV-1 Nef to CD4, **241**, 136–142.
Mutational Analysis of the Fingers and Palm Subdomains of Human Immunodeficiency Virus Type-1 (HIV-1) Reverse Transcriptase, **243**, 472–483.

HIV-1 matrix protein
Three-dimensional Structure of the Human Immunodeficiency Virus Type 1 Matrix Protein, **244**, 198–223.

HLA-A2
Five Viral Peptide–HLA-A2 Co-crystals. Simultaneous Space Group Determination and X-ray Data Collection, **239**, 581–587.

HLA-DRA
Control of Nucleo-cytoplasmic *HLA-DRA* mRNA Partitioning by Interaction of a Retention Signal with Compartmentalized Proteins, **240**, 193–204.

HMG
The Footprint of Chromosomal Proteins HMG-14 and HMG-17 on Chromatin Subunits, **236**, 189–198.

hnRNPs
Identification, Molecular Cloning, Expression and Chromosome Mapping of a Family of Transformation Upregulated hnRNP-K Proteins Derived by Alternative Splicing, **236**, 33–48.

hok
The *parDE* Operon of the Broad-host-range Plasmid RK2 Specifies Growth Inhibition Associated with Plasmid Loss, **237**, 35–51.
Host-inhibitory Functions Encoded by Promiscuous Plasmids. Transient Arrest of *Escherichia coli* Segregants that Fail to Inherit Plasmid RK2, **237**, 52–64.

Holliday junction
Mapping the Functional Domains of Bacteriophage Lambda Integrase Protein, **235**, 908–925.
Holliday Junction Crossover Topology, **236**, 91–105.
Structure of Four-way DNA Junctions containing a Nick in One Strand, **238**, 62–74.
Symmetric Holliday Junction Crossover Isomers, **238**, 658–668.
Preliminary Crystallographic Study of *Escherichia coli* RuvC Protein. An Endonuclease Specific for Holliday Junctions, **241**, 281–282.

Holotryptophanases
Crystallization and Preliminary X-ray Investigation of Holotryptophanases from *Escherichia coli* and *Proteus vulgaris*, **235**, 783–786.

Homing endonuclease
Structural Characteristics of the Stable RNA Introns of Archaeal Hyperthermophiles and their Splicing Junctions, **243**, 846–855.

Homo base mismatches
Solution Structure of the d(T-C-G-A) Duplex at Acidic pH. A Parallel-Stranded Helix Containing $C^+ \cdot C$, $G \cdot G$ and $A \cdot A$ Pairs, **242**, 508–526.

Homologous proteins
Redefining the Goals of Protein Secondary Structure Prediction, **235**, 13–26.

Homologous recombination
See also Recombination.
Preliminary Crystallographic Study of *Escherichia coli* RuvC Protein. An Endonuclease Specific for Holliday Junctions, **241**, 281–282.
Thymine Starvation-induced Structural Changes in *Escherichia coli* DNA. Detection by Pulsed Field Gel Electrophoresis and Evidence for Involvement of Homologous Recombination, **243**, 611–620.

Homologous sequences
Use of Amino Acid Environment-dependent Substitution Tables and Conformational Propensities in Structure Prediction from Aligned Sequences of Homologous Proteins. I. Solvent Accessibility Classes, **238**, 682–692.
Use of Amino Acid Environment-dependent Substitution Tables and Conformational Propensities in Structure Prediction from Aligned Sequences of Homologous Proteins. II. Secondary Structures, **238**, 693–708.
The Immunoglobulin Fold. Structural Classification, Sequence Patterns and Common Core, **242**, 309–320.

Homology
recA-independent and *recA*-dependent Intramolecular Plasmid Recombination. Differential Homology Requirement and Distance Effect, **235**, 414–423.
Drosophila kelch Motif is Derived from a Common Enzyme Fold, **236**, 1277–1282.

Homology modeling
Prediction of Protein Side-chain Conformations from Local Three-dimensional Homology Relationships, **235**, 1088–1097.
Application of a Self-consistent Mean Field Theory to Predict Protein Side-chains Conformation and Estimate Their Conformational Entropy, **239**, 249–275.
Homology Modeling of Divergent Proteins, **241**, 143–149.
New Alignment Strategy for Transmembrane Proteins, **243**, 388–396.

Homology sequence
The Genes for Transcription Factor Nuclear Factor I Give Rise to Corresponding Splice Variants between Vertebrate Species, **238**, 860–865.

Homophilic binding
Expression and Crystallization of a Soluble Form of *Drosophila* Fasciclin III, **241**, 483–487.

Hook-associated protein
A Mutant Hook-associated Protein (HAP3) Facilitates Torsionally Induced Transformations of the Flagellar Filament of *Escherichia coli*, **238**, 173–186.

Hormone receptors
See also Receptors.
BmCF1, a *Bombyx mori* RXR-type Receptor Related to the *Drosophila ultraspiracle*, **238**, 479–486.

Horse
A Novel tRNA Species as an Origin of Short Interspersed Repetitive Elements (SINEs). Equine SINEs May Have Originated From $tRNA^{Ser}$, **239**, 731–735.

Horse gram
Crystallization and Preliminary X-ray Diffraction Studies on a Trypsin/Chymotripsin Double-headed Inhibitor from Horse Gram, **235**, 364–366.

Host-lethal genes
Host-inhibitory Functions Encoded by Promiscuous Plasmids. Transient Arrest of *Escherichia coli* Segregants that Fail to Inherit Plasmid RK2, **237**, 52–64.

***hox* genes**
The *hypE* Gene Completes the Gene Cluster for H_2-oxidation in *Azotobacter vinelandii*, **236**, 390–396.

HPr
The 1·6 Å Structure of Histidine-containing Phosphotransfer Protein HPr from *Streptococcus faecalis*, **236**, 1341–1355.
The High-resolution Structure of the Histidine-containing Phosphocarrier Protein HPr from *Escherichia coli* Determined by Restrained Molecular Dynamics from Nuclear Magnetic Resonance Overhauser Effect Data, **237**, 544–559.

hsc70
Different Peptide Binding Specificities of hsp70 Family Members, **241**, 133–135.

hsp70
Specificity of DnaK–peptide Binding, **235**, 848–854.
Isolation and Characterization of an *Escherichia coli* DnaK Mutant with Impaired ATPase Activity, **242**, 364–377.

H-type 2 determinant
Crystallization of *Ulex europaeus* Lectin I, **243**, 345–346.

HU protein
Interrelations of Secondary Structure Stability and DNA-binding Affinity in the Bacteriophage SPO1-encoded Type II DNA-binding Protein TF1, **236**, 139–150.
DNA-binding Parameters of the HU Protein of *Escherichia coli* to Cruciform DNA, **242**, 116–129.
Faithful Cleavage of the P1 Packaging Site (*pac*) Requires Two Phage Proteins, PacA and PacB, and Two *Escherichia coli* Proteins, IHF and HU, **243**, 268–282.

Human apolipoprotein C-I
Crystallization and Preliminary X-ray Analysis of Human Plasma Apolipoprotein C-I, **236**, 382–384.

Human argininosuccinic acid lyase ***See*** **Argininosuccinic acid lyase**

Human carbonic anhydrase I ***See*** **Carbonic anhydrase structure**

Human carbonyl reductase
Expression, Crystallization and Preliminary Crystallographic Analysis of Human Carbonyl Reductase, **244**, 659–664.

Human cells
Proximal and Distal Effects of Sequence Context on Ultraviolet Mutational Hotspots in a Shuttle Vector Replicated in Xeroderma Cells, **236**, 491–502.

Human DNA
Enrichment of Human DNAs that Flank Poly(dA)·poly(dT) Tracts by Triplex DNA Formation, **237**, 193–200.

Human growth hormone
The Crystal Structure of Affinity-matured Human Growth Hormone at 2 Å Resolution, **236**, 286–299.

Human immunodeficiency virus type 1 (HIV-1) ***See*** **HIV-1**

Human interleukin-4, ***See*** **Interleukin-4**

Human lysozyme, ***see*** **Lysozyme**

Human myoglobin, ***see*** **Myoglobin**

Human rhinovirus, ***see*** **Rhinovirus**

Human RT6 gene
Premature Stop Codons Inactivate the RT6 Genes of the Human and Chimpanzee Species, **243**, 537–546.

Humanization
Comparison of Surface Accessible Residues in Human and Murine Immunoglobulin Fv Domains. Implication for Humanization of Murine Antibodies, **235**, 959–973.

Humanized antibody
Idiotope Determining Regions of a Mouse Monoclonal Antibody and Its Humanized Versions. Identification of Framework Residues that Affect Idiotype Expression, **235**, 53–60.

***hup* genes**
Sequences, Organization and Analysis of the *hupZM-NOQRTV* Genes from the *Azotobacter chroococcum* Hydrogenase Gene Cluster, **243**, 549–557.

Hydrodynamic properties
Characterization of the Tryptophan Fluorescence and Hydrodynamic Properties of Rat DNA Polymerase β, **244**, 224–235.

Hydrogen bonds
Comparative Studies of High Resolution *Z*-DNA Crystal Structures. Part 1: Common Hydration Patterns of Alternating dC-dG, **236**, 1154–1168.
The Use of Composite Crystal-field Environments in Molecular Recognition and the *de Novo* Design of Protein Ligands, **237**, 212–235.
Satisfying Hydrogen Bonding Potential in Proteins, **238**, 777–793.
Amino/Aromatic Interactions in Proteins: Is the Evidence Stacked Against Hydrogen Bonding?, **239**, 315–331.
(His)C^{ε}-H···O=C< Hydrogen Bond in the Active Sites of Serine Hydrolases, **241**, 83–93.
The Origins of Protein Secondary Structure. Effects of Packing Density and Hydrogen Bonding Studied by a Fast Conformational Search, **241**, 214–225.
The Role of Side-chain Hydrogen Bonds in the Formation and Stabilization of Secondary Structure in Soluble Proteins, **243**, 504–519.

Hydrogen exchange
Amide Hydrogen Exchange in a Highly Denatured State. Hen Egg-white Lysozyme in Urea, **237**, 247–254.

Hydrogen uptake
Sequences, Organization and Analysis of the *hupZM-NOQRTV* Genes from the *Azotobacter chroococcum* Hydrogenase Gene Cluster, **243**, 549–557.

Hydrogenase
The *hypE* Gene Completes the Gene Cluster for H_2-oxidation in *Azotobacter vinelandii*, **236**, 390–396.
Sequences, Organization and Analysis of the *hupZM-NOQRTV* Genes from the *Azotobacter chroococcum* Hydrogenase Gene Cluster, **243**, 549–557.

Hydrogen–deuterium exchange
Role of the Domain–Domain Interaction in the Construction of the Antigen Combining Site. A Comparative Study by ^{1}H-^{15}N Shift Correlation NMR Spectroscopy of the Fv and Fab Fragments of Anti-dansyl Mouse Monoclonal Antibody, **243**, 494–503.

Hydrolase
Crystal and Molecular Structure of Barley α-Amylase, **239**, 104–121.
Crystallization and Preliminary X-ray Diffraction Studies of an Endoglucanase from *Aspergillus aculeatus*, **241**, 278–280.
Computer Analysis of Bacterial Haloacid Dehalogenases Defines a Large Superfamily of Hydrolases with Diverse Specificity. Application of an Iterative Approach to Database Search, **244**, 125–132.

Hydrophobic effect
Solvent Rearrangement in an Antigen–Antibody Interface Introduced by Site-directed Mutagenesis of the Antibody Combining Site, **238**, 496–500.
Thermodynamics of Substrates and Reversible Inhibitors Binding to the Active Site Cleft of Human α-thrombin, **239**, 569–577.

Hydrophobic heptad repeats
Analysis of the N-Terminal Leucine Heptad and Hexad Repeats of Sigma 54, **239**, 15–24.

Hydrophobic interface
The Activation of *Escherichia coli* Aspartate Transcarbamylase by ATP. Specific Involvement of Helix H2′ at the Hydrophobic Interface Between the Two Domains of the Regulatory Chains, **242**, 139–149.

Hydrophobicity
Determination of α-Helix Propensity within the Context of a Folded Protein. Sites 44 and 131 in Bacteriophage T4 lysozyme, **235**, 600–624.
Neural Network Model of the Genetic Code is Strongly Correlated to the GES Scale of Amino Acid Transfer Free Energies, **243**, 816–820.

Hydroxyapatite
A Unique Protonated Phosphate Group in Bone Mineral Not Present in Synthetic Calcium Phosphates. Identification by Phosphorous-31 Solid State NMR Spectroscopy, **244**, 423–435.

Hydroxyisocaproate dehydrogenase
Crystallization and Preliminary Characterization of Crystals of D-2-hydroxyisocaproate Dehydrogenase from *Lactobacillus casei*, **240**, 400–402.

Hydroxyl group binding
Molecular Recognition in Proteins. Simulation Analysis of Substrate Binding by a Tyrosyl-tRNA Synthetase Mutant, **236**, 1049–1066.

Hydroxyl radical footprinting
Transcription of the *xyl* Operon is Controlled in *Bacillus subtilis* by Tandem Overlapping Operators Spaced by Four Base-pairs, **243**, 413–424.

Hydroxylases
Preliminary Crystallographic Analysis of Methane Mono-oxygenase Hydroxylase from *Methylosinus trichosporium* OB3b, **236**, 379–381.

Hydroxymethylcytosine
Molecular Cloning and Expression of a Novel Hydroxymethylcytosine-specific Restriction Enzyme (*Pvu*RtsII) Modulated by Glucosylation of DNA, **242**, 45–61.

Hydroxypyruvate reductase
Crystal Structure of a NAD-dependent D-Glycerate Dehydrogenase at 2·4 Å Resolution, **236**, 1123–1140.

***hyp* genes**
The *hypE* Gene Completes the Gene Cluster for H_2-oxidation in *Azotobacter vinelandii*, **236**, 390–396.

Hyperaccuracy
Increased Longevity of EF-1α High-fidelity Mutants in *Podospora anserina*, **235**, 231–236.

Hypersensitive response
Structure-function Relationship Between Tobacco Mosaic Virus Coat Protein and Hypersensitivity in *Nicotiana sylvestris*, **242**, 130–138.

Hyphomicrobium methylovorum
Crystal Structure of a NAD-dependent D-Glycerate Dehydrogenase at 2·4 Å Resolution, **236**, 1123–1140.

Ice
Single Crystals of a Type III Antifreeze Polypeptide from Ocean Pout, **237**, 351–352.

Idiotope
Crystallization and Preliminary X-ray Diffraction Study of an Idiotope-Anti-Idiotope Fv-Fv Complex, **241**, 739–743.

Idiotope–anti-idiotope-Fab-complex
Exploring the Mimicry of Polysaccharide Antigens by Anti-idiotypic Antibodies. The Crystallization, Molecular Replacement, and Refinement to 2·8 Å Resolution of an Idiotope–Anti-idiotope-Fab Complex and of the Unliganded-Anti-idiotope Fab, **241**, 691–705.

Idiotype
Idiotope Determining Regions of a Mouse Monoclonal Antibody and Its Humanized Versions. Identification of Framework Residues that Affect Idiotype Expression, **235**, 53–60.
Exploring the Mimicry of Polysaccharide Antigens by Anti-idiotypic Antibodies. The Crystallization, Molecular Replacement, and Refinement to 2·8 Å Resolution of an Idiotope–Anti-idiotope-Fab Complex and of the Unliganded-Anti-idiotope Fab, **241**, 691–705.

IFN-γ, *see* Interferon

IHF
Topological Scanning of the P1 Plasmid Partition Site, **243**, 190–198.
Faithful Cleavage of the P1 Packaging Site (*pac*) Requires Two Phage Proteins, PacA and PacB, and Two *Escherichia coli* Proteins, IHF and HU, **243**, 268–282.

Illegitimate recombination
Single Base-Pair Deletions Induced by Bleomycin at Potential Double-strand Cleavage Sites in the *aprt* Gene of Stationary Phase Chinese Hamster Ovary D422 Cells, **243**, 216–226.

Image analysis
Isolation, Characterization and Structure of Bacterial Flagellar Motors Containing the Switch Complex, **235**, 1261–1270.

Image processing
The Interhexameric Contacts in the Four-hexameric Hemocyanin from the Tarantula *Eurypelma californicum*. A Tentative Mechanism for Cooperative Behavior, **237**, 464–478.
Quaternary Structure of *Octopus vulgaris* Hemocyanin. Three-dimensional Reconstruction from Frozen-hydrated Specimens and Intramolecular Location of Functional Units $O_e e$ and $O_v b$, **238**, 75–87.
Analysis of Electron Microscope Images and Electron Diffraction Patterns of Thin Crystals of Ø29 Connectors in Ice, **240**, 281–287.
Three-dimensional Reconstruction from a Frozen-hydrated Specimen of the Chiton *Lepidochiton sp.* Hemocyanin, **244**, 640–647.

Image simulation
The Interhexameric Contacts in the Four-hexameric Hemocyanin from the Tarantula *Eurypelma californicum*. A Tentative Mechanism for Cooperative Behavior, **237**, 464–478.

Imaging plate
X-ray Diffraction Study of the Live Squid Retina, **238**, 139–144.

Immobilized micrococcal nuclease
On the Location of Linker DNA in the Chromatin Fiber. Studies with Immobilized and Soluble Micrococcal Nuclease, **235**, 871–880.

Immuno EM
Gold/Fab Immuno Electron Microscopy Localization of Troponin H and Troponin T in *Lethocerus* Flight Muscle, **239**, 52–67.

Immunoelectron microscopy
An Epitope Proximal to the Carboxyl Terminus of the α-Subunit is Located near the Lobe Tips of the Phosphorylase Kinase Hexadecamer, **235**, 974–982.
Folding Intermediate Binds to the Bottom of Bullet-shaped Holo-chaperonin and is Readily Accessible to Antibody, **236**, 691–696.
Quaternary Structure of *Octopus vulgaris* Hemocyanin. Three-dimensional Reconstruction from Frozen-hydrated Specimens and Intramolecular Location of Functional Units $O_e e$ and $O_v b$, **238**, 75–87.

Immunoglobulin
Comparison of Surface Accessible Residues in Human and Murine Immunoglobulin Fv Domains. Implication for Humanization of Murine Antibodies, **235**, 959–973.
Dynamical Structure of the Hinge Region of Immunoglobulin G as Studied by ^{13}C Nuclear Magnetic Resonance Spectroscopy, **236**, 300–309.
The *de Novo* Design of an Antibody Combining Site. Crystallographic Analysis of the V_L Domain Confirms the Structural Model, **238**, 226–244.
Structure Determination of an Fab Fragment that Neutralizes Human Rhinovirus 14 and Analysis of the Fab-Virus Complex, **240**, 127–137.
Sequence Statistics Reliably Predict Stabilizing Mutations in a Protein Domain, **240**, 188–192.
Preparation, Characterization and Crystallization of an Antibody Fab Fragment that Recognizes RNA. Crystal Structures of Native Fab and Three Fab-mononucleotide Complexes, **243**, 283–297.

Immunoglobulin G (Ig6)
Dynamical Structure of the Hinge Region of Immunoglobulin G as Studied by ^{13}C Nuclear Magnetic Resonance Spectroscopy, **236**, 300–309.

Immunoglobulin superfamily
Expression and Crystallization of a Soluble Form of *Drosophila* Fasciclin III, **241**, 483–487.

Immunolocalization
Caulobacter Flagellar Function, but not Assembly, Requires FliL, a Non-polarly Localized Membrane Protein Present in all Cell Types, **243**, 227–244.

Immunosuppression
Preliminary Analysis of Multiple Crystal Forms of the Bovine Cyclophilin–Cyclosporin A Complex, **235**, 1136–1140.
The Molecular Replacement Solution and X-ray Refinement to 2·8 Å of a Decameric Complex of Human Cyclophilin A with the Immunosuppressive Drug Cyclosporin A, **244**, 385–409.

***In vitro* assembly**
In Vitro Assembly of Repertoires of Antibody Chains on the Surface of Phage by Renaturation, **239**, 68–78.

***In vitro* selection**
In Vitro Genetic Analysis of the Hinge Region Between Helical Elements P5-P4-P6 and P7-P3-P8 in the *sun Y* Group I Self-splicing Intron, **235**, 140–155.
In Vitro Selection of Small RNAs that Bind to *Escherichia coli* Phenylalanyl-tRNA Synthetase, **242**, 186–192.

***in vitro* transcription**
Regulation of the Transcription of a Cluster of *Bacillus subtilis* Spore Coat Genes, **240**, 405–415.

Incompatibility
Partitioning of Plasmid R1. Ten Direct Repeats Flanking the *parA* Promoter Constitute a Centromere-like Partition Site *parC*, that Expresses Incompatibility, **236**, 1289–1298.

Incompatibility group P
Host-inhibitory Functions Encoded by Promiscuous Plasmids. Transient Arrest of *Escherichia coli* Segregants that Fail to Inherit Plasmid RK2, **237**, 52–64.

IncW plasmid R388
Genetic Organization of the Conjugal DNA Processing Region of the IncW Plasmid R388, **235**, 448–464.

Induced-fit
The Structure of Uridylate Kinase with its Substrates, Showing the Transition State Geometry, **236**, 361–367.

Influenza virus
Defining the Requirements for an Antibody Epitope on Influenza Virus Neuraminidase: How Tolerant are Protein Epitopes?, **235**, 747–759.
Crystals of a Fragment of Influenza Haemagglutinin in the Low pH Induced Conformation, **236**, 1262–1265.

Infrared spectroscopy
Conformation and Fibrillogenesis of Alzheimer Aβ Peptides with Selected Substitution of Charged Residues, **244**, 64–73.

Inhibition
Crystallographic Study of Azide-inhibited Bovine Cu,Zn Superoxide Dismutase, **240**, 179–183.

Inhibitor
Crystallization and Preliminary X-ray Diffraction Studies on a Trypsin/Chymotripsin Double-headed Inhibitor from Horse Gram, **235**, 364–366.

Inhibitor complex
Preliminary X-ray Diffraction Studies of Recombinant 19 kDa Human Fibroblast Collagenase, **236**, 1410–1412.
Crystal Structures of *Escherichia coli* Aspartate Aminotransferase in Two Conformations. Comparison of an Unliganded Open and Two Liganded Closed Forms, **239**, 285–305.

Initiation
An *Escherichia coli* RNA Polymerase Defective in Transcription due to its Overproduction of Abortive Initiation Products, **236**, 72–80.

Inositol hexasulfate
^{1}H-NMR Assignment and Solution Structure of Human Acidic Fibroblast Growth Factor Activated by Inositol Hexasulfate, **242**, 81–98.

Inositol phosphate
Crystallization and Initial X-ray Crystallographic Characterization of Recombinant Bovine Inositol Polyphosphate 1-Phosphatase Produced in *Spodoptera frugiperda* Cells, **236**, 584–589.

Inovirus
Molecular Models and Structural Comparisons of Native and Mutant Class I Filamentous Bacteriophages. Ff(fd, f1, M13), If1 and IKe, **235**, 260–286.

InsA and ΔInsA-B′-InsB proteins
Genetic Evidence for IS*1* Transposition Regulated by InsA and the ΔInsA-B′-InsB Species, which is Generated by Translation from Two Alternative Internal Initiation Sites and Frameshifting, **240**, 52 65.

InsA binding sequence
Functional Analysis of the 14 kDa Protein of Insertion Sequence *2*, **236**, 503–513.

Insect yolk protein
Analysis of Mosquito Vitellogenin cDNA. Similarity with Vertebrate Phosvitins and Arthropod Serum Proteins, **237**, 641–647.

Insecticidal crystal protein
Crystallization and Preliminary X-ray Diffraction Studies of the Lepidopteran-specific Insecticidal Crystal Protein CrylA(a), **243**, 530–532.

Insecticides
Crystallization and Preliminary X-ray Diffraction Studies of a Glutathione S-Transferase from the Australian Sheep Blowfly, *Lucilia cuprina*, **236**, 1407–1409.

Insertion sequence
Mutagenesis of the Paracrystalline Surface Protein Array of *Aeromonas salmonicida* by Endogenous Insertion Elements, **237**, 452–463.
Induction of the SOS Response by IS*1* Transposase, **242**, 339–350.

Insertions
Accommodation of Amino Acid Insertions in an α-Helix of T4 Lysozyme. Structural and Thermodynamic Analysis, **236**, 869–886.

Insulin dimerization
The Contribution of Vibrational Entropy to Molecular Association. The Dimerization of Insulin, **238**, 405–414.

Integral membrane protein
Refined Structure of the Porin from *Rhodopseudomonas blastica*. Comparison with the Porin from *Rhodobacter capsulatus*, **243**, 891–905.

Integrase
Mapping the Functional Domains of Bacteriophage Lambda Integrase Protein, **235**, 908–925.

Integrin
Analysis of Repeated Motifs in the Talin Rod, **235**, 1278–1290.
The Secondary Structure of the von Willebrand Factor Type A Domain in Factor B of Human Complement by Fourier Transform Infrared Spectroscopy. Its Occurrence in Collagen Types VI, VII, XII and XIV, the Integrins and Other Proteins by Averaged Structure Predictions, **238**, 104–119.
Crystallization and Preliminary X-ray Diffraction Characterisation of both a Native and Selenomethionyl VLA-4 Binding Fragment of VCAM-1, **244**, 464–468.

Interaction
Myristoylation-dependent Binding of HIV-1 Nef to CD4, **241**, 136–142.
The Characterization of p53 Binding Phage Isolated from Phage Peptide Display Libraries, **243**, 639–652.

Interduplex interaction
Analysis of Action of Wobble Nucleoside Modifications on Codon-Anticodon Pairing within the Ribosome, **240**, 8–19.

Interferon
The Influence of Adenine-rich Motifs in the 3′ Portion of the Ribosome Binding Site on Human IFN-γ Gene Expression in *Escherichia coli*, **240**, 20–27.
Domains of Interaction between Alpha Interferon and its Receptor Components, **243**, 245–257.

Interhelical ionic interactions
The Role of Interhelical Ionic Interactions in Controlling Protein Folding and Stability. *De Novo* Designed Synthetic Two-stranded αHelical Coiled-Coils, **237**, 500–512.

Interleukin-4
Aspects of Receptor Binding and Signalling of Interleukin-4 Investigated by Site-Directed Mutagenesis and NMR Spectroscopy, **237**, 423–436.
Analysis of the Solution Structure of Human Interleukin-4 Determined by Heteronuclear Three-dimensional Nuclear Magnetic Resonance Techniques, **238**, 23–41.

Interleukin-5
Purification, Crystallization and Preliminary X-ray Analysis of Murine Interleukin-5, **241**, 269–272.

Intermediate filament protein
Characterization of Multiple Oligometric Vimentin Intermediate Filament Units by Transient Electric Birefringence Measurements, **236**, 1241–1249.

χ intermediate
Resolution of Immobile χ Structures by the FLP Recombinase of 2 μm Plasmid, **243**, 199–207.

Inter-microvillus material
X-ray Diffraction Study of the Live Squid Retina, **238**, 139–144.

Intermolecular ligation
Intramolecular and Intermolecular DNA Ligation Mediated by Topoisomerase II, **241**, 18–25.

Internal initiation
Requirement of 3′-Terminal Guanosine in (−)-Stranded RNA for *in vitro* Replication of Cucumber Mosaic Virus Satellite RNA by Viral RNA-dependent RNA Polymerase, **238**, 655–657.
Starting Window, a Distinct Element in the Cap-independent Internal Initiation of Translation on Picornaviral RNA, **241**, 398–414.

Internal motions
Nuclear Magnetic Resonance Solution Structure of the Arc Repressor Using Relaxation Matrix Calculations, **236**, 328–341.

Internal sequence elimination
Chromosome End Formation and Internal Sequence Elimination as Alternative Genomic Rearrangements in the Ciliate *Paramecium*, **236**, 421–426.

Inter-strand water bridging
Comparative Studies of High Resolution *Z*-DNA Crystal Structures. Part 1: Common Hydration Patterns of Alternating dC-dG, **236**, 1154–1168.

Intervening sequence
recA-independent and *recA*-dependent Intramolecular Plasmid Recombination. Differential Homology Requirement and Distance Effect, **235**, 414–423.

Intra-allelic complementation
Genetic Studies on the Poliovirus 2C Protein, an NTPase, **236**, 1310–1323.

Intracellular and extracellular proteins
Discrimination of Intracellular and Extracellular Proteins Using Amino Acid Composition and Residue-pair Frequencies, **238**, 54–61.

Intracellular vesicular traffic
Crystallization and Preliminary Crystallographic Data for Rab Guanine Nucleotide Dissociation Inhibitor (RabGDI) from Bovine Brain, **244**, 469–473.

Intragenic complementation
Expression, Purification, Crystallization and Preliminary X-ray Analysis of Human Argininosuccinic Acid Lyase, **239**, 336–338.

Intramolecular DNA triplex
The Loop Sequence Plays Crucial Roles for Isomerization of Intramolecular DNA Triplexes in Supercoiled Plasmids, **235**, 185–197.

Intramolecular ligation
Intramolecular and Intermolecular DNA Ligation Mediated by Topoisomerase II, **241**, 18–25.

Intramolecular plasmid recombination
recA-independent and *recA*-dependent Intramolecular Plasmid Recombination. Differential Homology Requirement and Distance Effect, **235**, 414–423.

Intronless gene
A β-Tubulin Gene of *Naegleria* Encodes a Carboxy-terminal Tyrosine. Aromatic Amino Acids Are Conserved at Carboxy Termini, **235**, 377–388.

Introns
See also Group I introns; Group II introns.
A Chloroplast Group I Intron Undergoes the First Step of Reverse Splicing into Host Cytoplasmic 5·8 S rRNA. Implications for Intron-mediated RNA Recombination, Intron Transposition and 5·8 S rRNA Structure, **236**, 455–468.
The Ribosomal RNA Gene Region in *Acanthamoeba castellanii* Mitochondrial DNA. A Case of Evolutionary Transfer of Introns between Mitochondria and Plastids?, **239**, 476–499.

Invertase
Processive Recombination by Wild-type Gin and an Enhancer-independent Mutant. Insight into the Mechanisms of Recombination Selectivity and Strand Exchange, **243**, 437–457.

Invertebrate
Generality of the tRNA Origin of Short Interspersed Repetitive Elements (SINEs). Characterization of Three Different tRNA-derived Retroposons in the Octopus, **243**, 25–37.

Invertebrate hemoglobin
Structural Analysis of *Urechis caupo* Hemoglobin, **237**, 87–97.

Inverted repeats
Tc1 Transposon-like Sequences are Widely Distributed in Salmonids, **241**, 26–34.

Ion binding
Molecular Recognition by Thrombin. Role of the Slow→Fast Transition, Site-specific Ion Binding Energetics and Thermodynamic Mapping of Structural Components, **235**, 733–746.
Improved Continuum Electrostatic Modelling in Proteins, with Comparison to Experiment, **236**, 887–903.

Ion channels
Structure and Orientation of the Pore-forming Peptide, Melittin, in Lipid Bilayers, **241**, 456–466.

IQ motif
A Myosin from a Higher Plant has Structural Similarities to Class V Myosins, **239**, 591–597.

Iron mineralization
The Role of the L-Chain in Ferritin Iron Incorporation. Studies of Homo and Heteropolymers, **238**, 649–654.

Iron regulation
Fur Regulon in Gram-negative Bacteria. Identification and Characterization of New Iron-regulated *Escherichia coli* Genes by a Fur Titration Assay, **236**, 531–545.

Iron-sulfur enzyme
Crystal Structures of Aconitase with *Trans*-aconitate and Nitrocitrate Bound, **237**, 437 451.

IS*1*
Genetic Evidence for IS*1* Transposition Regulated by InsA and the ΔInsA-B′-InsB Species, which is Generated by Translation from Two Alternative Internal Initiation Sites and Frameshifting, **240**, 52–65.
Induction of the SOS Response by IS*1* Transposase, **242**, 339–350.

IS*2*
Functional Analysis of the 14 kDa Protein of Insertion Sequence *2*, **236**, 503–513.

IS50 transposase gene
Control of Translation by mRNA Secondary Structure in *Escherichia coli*. A Quantitative Analysis of Literature Data, **244**, 144–150.

Isoferritins
The Role of the L-Chain in Ferritin Iron Incorporation. Studies of Homo and Heteropolymers, **238**, 649–654.

Isoleucine tRNA
Molecular Recognition of the Identity-determinant Set of Isoleucine Transfer RNA from *Escherichia coli*, **236**, 710–724.

Isomerase
Crystallization and Preliminary X-ray Analysis of *Candida albicans* Phosphomannose Isomerase, **237**, 349–350.

Isomerization of triplex
The Loop Sequence Plays Crucial Roles for Isomerization of Intramolecular DNA Triplexes in Supercoiled Plasmids, **235**, 185–197.

Isopenicillin N synthase
Crystallization and Preliminary X-ray Diffraction Studies on a Recombinant Isopenicillin N Synthase from *Cephalosporium acremonium*, **242**, 712–714.

Jeffamine
Crystallization and Preliminary X-ray Diffraction Studies of Xylose Isomerase from *Thermoanaerobacterium thermosulfurigenes* Strain 4B, **240**, 504–506.

Junction
Sequence Elements Responsible for DNA Curvature, **244**, 135–143.

***kelch* motif**
Drosophila kelch Motif is Derived from a Common Enzyme Fold, **236**, 1277–1282.

Keratin 8
A Monoclonal Antibody Epitope on Keratin 8 Identified Using a Phage Peptide Library, **235**, 61–67.

***Killer of prune* mutation**
Refined X-ray Structure of *Dictyostelium discoideum* Nucleoside Diphosphate Kinase at 1·8 Å Resolution, **243**, 873–890.

Kinase
Hidden Markov Models in Computational Biology. Applications to Protein Modeling, **235**, 1501–1531.

Kinetic analysis
Studies of the Interactions Between *Escherichia coli* Ribonuclease HI and Its Substrate, **243**, 782–791.

Kinetic coupling
A Quaternary Transcription Termination Complex. Reciprocal Stabilization by Rho Factor and NusG Protein, **243**, 830–839.

Kinetic intermediate
Engineered Tyrosine Residues Serve as the Local Probes to Detect a Kinetic Intermediate in the Folding of Ribose-binding Protein, **240**, 385–395.

Kinetic parameters
Kinetic Theory of ATP-driven Translocases on One-dimensional Polymer Lattices, **235**, 1436–1446.

Kinetics
The Role of Glu187 in the Regulation of Phosphofructokinase by Phosphoenolpyruvate, **235**, 68–72.
Ultrafast Measurements of Geminate Recombination of NO with Site-specific Mutants of Human Myoglobin, **238**, 437–444.
Changes in Calcium and Collagen IV Binding Caused by Mutations in the EF Hand and Other Domains of Extracellular Matrix Protein BM40 (SPARC, Osteonectin), **238**, 563–574.
Direct and Indirect Effects of Mutations in λ P_{RM} on Open Complex Formation at the Divergent P_R Promoter, **240**, 119–126.
TEM β-Lactamase Mutants Hydrolysing Third-generation Cephalosporins. A Kinetic and Molecular Modelling Analysis, **244**, 625–639.

Ki-ras
Amino Acid Requirements of the Nucleocapsid Protein of HIV-1 for Increasing Catalytic Activity of a Ki-ras Ribozyme *in Vitro*, **242**, 422–429.

Kirromycin
Synergism between the GTPase Activities of EF-Tu·GTP and EF-G·GTP on Empty Ribosomes. Elongation Factors as Stimulators of the Ribosomal Oscillation between Two Conformations, **242**, 644–654.

KMSKS sequence
Methionyl-tRNA Synthetase Needs an Intact and Mobile $_{332}$KMSKS$_{336}$ Motif in Catalysis of Methionyl Adenylate Formation, **242**, 566–577.

Kringle
Solution Structure of the Kringle Domain from Urokinase-type Plasminogen Activator, **235**, 1548–1559.

L11-L1-L10-L12 operon
Structure and Transcription of the L11-L1-L10-L12 Ribosomal Protein Gene Operon from the Extreme Thermophilic Archaeon *Sulfolobus acidocaldarius*, **244**, 242–249.

L23 operon
Protein Substitution in Chloroplast Ribosome Evolution. A Eukaryotic Cytosolic Protein has Replaced its Organelle Homologue (L23) in Spinach, **240**, 28–41.

***lac* promoter**
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP) I. Saturation and Alanine-scanning Mutagenesis, **243**, 595–602.
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP). II. Role at Class I and Class II CAP-dependent Promoters, **243**, 603–610.

***lac* repressor**
Genetic Studies of the *lac* Repressor. XIV. Analysis of 4000 Altered *Escherichia coli lac* Repressors Reveals Essential and Non-essential Residues, As Well As "Spacers" Which Do Not Require a Specific Sequence, **240**, 421–433.
RNA Chain Elongation and Termination by Mammalian RNA Polymerase III. Analysis of tRNA Gene Transcription by Imposing a Reversible Factor-mediated Block to Elongation using a Sequence-specific DNA Binding Protein, **244**, 482–493.

lacI
High Resolution Mapping of UV-induced Photoproducts in the *Escherichia coli lacI* Gene. Inefficient Repair of the Non-transcribed Strand Correlates with High Mutation Frequency, **238**, 319–332.

lacI family
Crystallization and Preliminary X-ray Analysis of an *Escherichia coli* Purine Repressor-Hypoxanthine-DNA Complex, **242**, 302–305.

α-lactalbumin
Characterization of a Trifluoroethanol-induced Partially Folded State of α-Lactalbumin, **235**, 587–599.

***w*-lactamase**
TEM β-Lactamase Mutants Hydrolysing Third-generation Cephalosporins. A Kinetic and Molecular Modelling Analysis, **244**, 625–639.

Lactate dehydrogenase
Crystallization of D-Lactate Dehydrogenase from *Lactobacillus bulgaricus*, **235**, 370–371.
A Regular 1 : 1 Complex of Two Allosteric States in the Single Crystal of L-Lactate Dehydrogenase from *Bifidobacterium longum*, **236**, 958–959.
Allosteric Activation in *Bacillus stearothermophilus* Lactate Dehydrogenase Investigated by an X-ray Crystallographic Analysis of a Mutant Designed to Prevent Tetramerization of the Enzyme, **238**, 615–625.

Lactobacillus bulgaricus
Crystallization of D-Lactate Dehydrogenase from *Lactobacillus bulgaricus*, **235**, 370–371.

Lactobacillus casei
Crystallization and Preliminary Characterization of Crystals of D-2-hydroxyisocaproate Dehydrogenase from *Lactobacillus casei*, **240**, 400–402.

Lactococcus lactis
Crystallization and Preliminary X-ray Analysis of PepC, a Thiol Aminopeptidase from *Lactococcus lactis* Homologous to Bleomycin Hydrolase, **237**, 160–162.

Lactose
Dependence of Lactose Metabolism upon Mutarotase Encoded in the *gal* Operon in *Escherichia coli*, **244**, 269–278.

lacZ
Correlation of Translation Efficiency with the Decay of *lacZ* mRNA in *Escherichia coli*, **239**, 608–622.
Bacterial Expression of Catalytically Active Fragments of the Multifunctional Enzyme Enniatin Synthetase, **243**, 116–122.

LamB
Export and Trimerization Pathways of Maltoporin Overlap in the Inner Membrane of *Escherichia coli*, **238**, 555–562.

amB gene
Control of Translation by mRNA Secondary Structure in *Escherichia coli*. A Quantitative Analysis of Literature Data, **244**, 144–150.

Laticauda semifasciata
Tertiary Structure of Erabutoxin b in Aqueous Solution as Elucidated by Two-dimensional Nuclear Magnetic Resonance, **240**, 155–166.

Lattice model
Lattice Model Simulations of Polypeptide Chain Folding, **235**, 1032–1043.
Kinetics of Protein Folding. A Lattice Model Study of the Requirements for Folding to the Native State, **235**, 1614–1636.
Exploring Conformational Space with a Simple Lattice Model for Protein Structure, **243**, 668–682.

Lectin
Crystallization and Preliminary X-ray Diffraction Studies of the Soluble 14 kDa β-Galactoside-binding Lectin from Bovine Heart, **235**, 787–789.
Crystallization of *Ulex europaeus* Lectin I, **243**, 345–346.

Legumin
Crystallographic Characterization and Molecular Symmetry of Edestin, a Legumin from Hemp, **235**, 361–363.
Structure of Phaseolin at 2·2 Å Resolution. Implications for a Common Vicilin/Legumin Structure and the Genetic Engineering of Seed Storage Proteins, **238**, 748–776.

Lens
See also Crystallin.
Domain Interactions and Connecting Peptides in Lens Crystallins, **235**, 84–88.
ζ-Crystallin: A Lens-specific Promoter and the Gene Recruitment of an Enzyme as a Crystallin, **236**, 669 678.
Close Packing of an Oligomeric Eye Lens β-Crystallin Induces Loss of Symmetry and Ordering of Sequence Extensions, **236**, 1250–1258.

Lesion bypass
Effect of Single DNA Lesions on *in Vitro* Replication with DNA Polymerase III Holoenzyme. Comparison with other Polymerases, **236**, 151–164.

Lesion structure
Pyrimidine Ring Fragmentation Products. Effects of Lesion Structure and Sequence Context on Mutagenesis, **236**, 514–530.

Leucine dehydrogenase
Crystallization and Quaternary Structure Analysis of the NAD^+-dependent Leucine Dehydrogenase from *Bacillus sphaericus*, **236**, 663–665.

Leucine zipper
Prediction of the Folding Pathways and Structure of the GCN4 Leucine Zipper, **237**, 361–367.
The Role of Interhelical Ionic Interactions in Controlling Protein Folding and Stability. *De Novo* Designed Synthetic Two-stranded αHelical Coiled-Coils, **237**, 500–512.

Leucine-responsive regulatory protein
Structure–Function Relationship of the Lrp-binding Region Upstream of *LysU* in *Escherichia coli*, **241**, 378–389.

Leucine-rich repeats
Filamentous Hemagglutinin of *Bordetella pertussis*. A Bacterial Adhesin Formed as a 50-nm Monomeric Rigid Rod Based on a 19-residue Repeat Motif Rich in Beta Strands and Turns, **241**, 110–124.
Complex between Bovine Ribonuclease A and Porcine Ribonuclease Inhibitor Crystallizes in a Similar Unit Cell as Free Ribonuclease Inhibitor, **241**, 288–291.

Leukotriene A_4 hydrolase
Crystallization and Preliminary X-ray Crystallographic Studies of Recombinant Human Leukotriene A_4 Hydrolase Complexed with Bestatin, **238**, 854–856.

Lewis y
Crystallization and Preliminary X-ray Analysis of the Monoclonal Anti-tumor Antibody BR96 and its Complex with the Le^y Determinant, **235**, 372–376.

lexA
Identification of High Affinity Binding Sites for LexA which Define New DNA Damage-inducible Genes in *Escherichia coli*, **241**, 507–523.

Ligand affinity
High-Resolution Crystallographic Analysis of a Co-operative Dimeric Hemoglobin, **235**, 657–681.

Ligand binding
Principles Determining the Structure of β-Sheet Barrels in Proteins. II The Observed Structures, **236**, 1382–1400.
Crystals of Glutamine-binding Protein in Various Conformational States, **240**, 87–91.
Biotin and Biotin Analogues Specifically Modify the Fluorescence Decay of Avidin, **242**, 559–565.

Ligand conformation
Rational Automatic Search Method for Stable Docking Models of Protein and Ligand, **243**, 310–326.

Ligation intermediate
The 1·9 Å Structure of Deoxyβ_4 Hemoglobin. Analysis of the Partitioning of Quaternary-associated and Ligand-induced Changes in Tertiary Structure, **236**, 831–843.

Lignin
Crystal Structure of the Fungal Peroxidase from *Arthromyces ramosus* at 1·9 Å Resolution. Structural Comparisons with the Lignin and Cytochrome *c* Peroxidases, **235**, 331–344.

Limited proteolysis
See also Proteolysis.
The Domains of a Type I DNA Methyltransferase. Interactions and Role in Recognition of DNA Methylation, **236**, 1011–1021.
Solution Structure of Reactive-site Hydrolyzed Turkey Ovomucoid Third Domain by Nuclear Magnetic Resonance and Distance Geometry Methods, **242**, 215–230.

LINE-1 amplification
The Dynamics of Murine LINE-1 Subfamily Amplification, **241**, 390–397.

Linear dichroism
Flow Linear Dichroism and Electron Microscope Analysis of Protein–DNA Complexes of a Mutant UvrB Protein that Binds to but cannot Kink DNA, **241**, 645–650.

Linker DNA
On the Location of Linker DNA in the Chromatin Fiber. Studies with Immobilized and Soluble Micrococcal Nuclease, **235**, 871–880.

Linker insertion mutagenesis
Linker Insertion Mutagenesis of *Drosophila* Topoisomerase II. Probing The Structure of Eukaryotic Topoisomerase II, **235**, 436–447.

Lipase
Crystallization and Preliminary X-ray Studies of Lipase B from *Candida antarctica*, **235**, 790–792.
Crystallization and Preliminary X-ray Analysis of a Lipase from *Bacillus subtilis*, **238**, 857–859.

Lipid
Structure Characterization of Membrane Bound and Surface Adsorbed Protein, **237**, 1–4.

Lipid binding site
Refined Structure of the Porin from *Rhodopseudomonas blastica*. Comparison with the Porin from *Rhodobacter capsulatus*, **243**, 891–905.

Lipid membrane
Structure and Orientation of the Pore-forming Peptide, Melittin, in Lipid Bilayers, **241**, 456–466.

Lipid synthesis
Crystallization of the NADH-specific Enoyl Acyl Carrier Protein Reductase from *Brassica napus*, **237**, 240–242.

Lipopolysaccharide receptor
Calcium Ion-induced Structural Changes in Bacteriophage ϕX174, **244**, 291–300.

Lipoprotein
Three Highly Homologous Membrane-bound Lipoproteins Participate in Oligopeptide Transport by the Ami System of the Gram-positive *Streptococcus pneumoniae*, **241**, 44–58.

Liposome
Formation of Two-dimensional Arrays of Annexin V on Phosphatidylserine-containing Liposomes, **236**, 199–208.

Lipoyl domain
Structural Dependence of Post-translational Modification and Reductive Acetylation of the Lipoyl Domain of the Pyruvate Dehydrogenase Multienzyme Complex, **236**, 209–216.

Lithium
Crystallization and Initial X-ray Crystallographic Characterization of Recombinant Bovine Inositol Polyphosphate 1-Phosphatase Produced in *Spodoptera frugiperda* Cells, **236**, 584–589.

Live squid retina
X-ray Diffraction Study of the Live Squid Retina, **238**, 139–144.

Local probe
Engineered Tyrosine Residues Serve as the Local Probes to Detect a Kinetic Intermediate in the Folding of Ribose-binding Protein, **240**, 385–395.

Long-range interaction
Structural Study of the 5′ End of a Synthetic Premessenger RNA from Adenovirus. Evidence for a Long-range Exon-Intron Interaction, **240**, 205–225.

Low-temperature
Crystallization and Low Temperature Diffraction Studies of the DNA Binding Domain of the Single-stranded DNA Binding Protein from *Escherichia coli*, **240**, 396–399.

Lrp-binding region
Structure–Function Relationship of the Lrp-binding Region Upstream of *LysU* in *Escherichia coli*, **241**, 378–389.

Luciferase
Domains of Interaction between Alpha Interferon and its Receptor Components, **243**, 245–257.

Lysosomal enzyme
Crystallization and Preliminary X-ray Analysis of Human α-Galactosidase A Complex, **239**, 578–580.

Lysozyme
See also Hen egg-white lysozyme.
Thermal Expansion of Hen Egg-white Lysozyme. Comparison of the 1·9 Å Resolution Structures of the Tetragonal Form of the Enzyme at 100 K and 298 K, **235**, 302–317.
Determination of α-Helix Propensity within the Context of a Folded Protein. Sites 44 and 131 in Bacteriophage T4 lysozyme, **235**, 600–624.
^{1}H Nuclear Magnetic Resonance Studies of Hen Lysozyme-*N*-Acetylglucosamine Oligosaccharide Complexes in Solution. Application of Chemical Shifts for the Comparison of Conformational Changes in Solution and in the Crystal, **235**, 1072–1087.
Formation of α-Helix 88–98 is Essential in the Establishment of Higher-order Structure from Reduced Lysozyme, **235**, 1312–1317.
Translational and Rotational Diffusion of Proteins, **236**, 629–636.
Accommodation of Amino Acid Insertions in an α-Helix of T4 Lysozyme. Structural and Thermodynamic Analysis, **236**, 869–886.
Amide Hydrogen Exchange in a Highly Denatured State. Hen Egg-white Lysozyme in Urea, **237**, 247–254.
Crystal Structure of the Mutant D52S Hen Egg White Lysozyme with an Oligosaccharide Product, **243**, 856–872.
Structural Changes of Active Site Cleft and Different Saccharide Binding Modes in Human Lysozyme Co-crystallized with Hexa-*N*-acetyl-chitohexaose at pH 4·0, **244**, 522–540.

LysR family
Crystallization of a DNA and *N*-acetylserine Binding Fragment (Residues 1 to 233) of *Klebsiella aerogenes* CysB Protein, a Member of the LysR Family, **235**, 1159–1161.

LysU gene
Structure–Function Relationship of the Lrp-binding Region Upstream of *LysU* in *Escherichia coli*, **241**, 378–389.
Crystallization and Preliminary Diffraction Studies of *Escherichia coli* Lysyl-tRNA Synthetase, **243**, 123–125.

M.*Hae* III
Crystallization and Preliminary Crystallographic Analysis of a DNA (Cytosine-5)-Methyltransferase from *Haemophilus aegyptius* Bound Covalently to DNA, **238**, 626–629.

M.*Hga*I
Ligand-induced Conformational States of the Cytosine-specific DNA methyltransferase M.*Hga*I-2, **235**, 545–553.

M1 RNA mutants
Characterization of the *Borrelia burgdorferi* RNase P RNA Gene Reveals a Novel Tertiary Interaction, **241**, 1–6.
Cleavage Site Selection by M1 RNA, the Catalytic Subunit of *Escherichia coli* RNase P, is influenced by pH, **244**, 511–521.

M13, *see Bacteriophage M13*

M13mp18 *lacz′* mutational spectrum
Effects of DNA Adduct Structure and Distribution on the Mutagenicity and Genotoxicity of Two Platinum Anticancer Drugs, **236**, 1034–1048.

Macromolecular assembly
Molecular Models and Structural Comparisons of Native and Mutant Class I Filamentous Bacteriophages. Ff(fd, f1, M13), If1 and IKe, **235**, 260–286.

Macromolecular cryo-crystallography
Thermal Expansion of Hen Egg-white Lysozyme. Comparison of the 1·9 Å Resolution Structures of the Tetragonal Form of the Enzyme at 100 K and 298 K, **235**, 302–317.

Macrophage migration inhibitory factor
Crystallization and a Preliminary X-ray Diffraction Study of Macrophage Migration Inhibitory Factor from Human Lymphocytes, **235**, 1141–1143.

Macroseeding
Crystallization and Preliminary X-ray Analysis of Recombinant 1-Aminocyclopropane-1-carboxylate Synthase from Apple. A Key Enzyme in the Biosynthesis of the Plant Hormone Ethylene, **243**, 947–949.

Magnesium
Physiological Concentration of Magnesium Ions Induces a Strong Macroscopic Curvature in GGGCCC-containing DNA, **236**, 26–32.
Magnesium Binding to the Bacterial Chemotaxis Protein CheY Results in Large Conformational Changes Involving its Functional Surface, **238**, 489–495.
Crystallization and Preliminary Crystallographic Data for Acetohydroxy Acid Isomeroreductase from *Spinacia oleracea*, **242**, 578–581.

Major sperm protein (MSP)
The Motile Major Sperm Protein (MSP) of *Ascaris suum* Forms Filaments Constructed from Two Helical Subfilaments, **243**, 60–71.

Malaria
Characterization of a *Plasmodium vivax* Cysteine Proteinase Gene Identifies Uniquely Conserved Amino Acids that May Mediate the Substrate Specificity of Malarial Hemoglobinases, **241**, 312–316.

Malate dehydrogenase
Stability against Denaturation Mechanisms in Halophilic Malate Dehydrogenase Adapt to Solvent Conditions, **244**, 436–447.

Maltose binding protein
In Vitro Interaction of Nitrate-responsive Regulatory Protein NarL with DNA Target Sequences in the *fdnG*, *narG*, *narK* and *frdA* Operon Control Regions of *Escherichia coli* K-12, **241**, 150–165.

Maltose system
Which Nucleotides in the "−10" Region are Crucial to Obtain a Fully Active MalT-dependent Promoter?, **238**, 643–648.

Mammal ion cells
An Alternative Splicing Modifies the C-Terminal End of Tryptophanyl-tRNA Synthetase in Murine Embryonic Stem Cells, **242**, 599–603.

Mammalian cells
Coding Properties of a Unique Apurinic/Apyrimidinic Site Replicated in Mammalian Cells, **240**, 416–420.

Mammalian hemoglobins
See also Hemoglobin.
Synergistic Modulation by Chloride and Organic Phosphates of Hemoglobin from Bear (*Ursus arctos*), **236**, 1401–1406.

Mammalian RNA polymerase III, *see* RNA polymerase III

Manganese
Preliminary Crystallographic Analysis of Manganese Peroxidase from *Phanerochaete chrysosporium*, **238**, 845–848.

Mannose binding protein
Crystallization and Preliminary X-ray Analysis of a Trimeric Form of Human Mannose Binding Protein, **241**, 125–127.

Markov models
Hidden Markov Models in Computational Biology. Applications to Protein Modeling, **235**, 1501–1531.

Mass spectrometry
Crystallization and X-ray Diffraction Study of the *Streptomyces* K15 Penicillin-binding DD-Transpeptidase, **241**, 295–297.

Mathematics for nucleic acid structure parameters
Nucleic Acid Structure Analysis. Mathematics for Local Cartesian and Helical Structure Parameters That Are Truly Comparable Between Structures, **237**, 125–156.

Matrix metalloproteases
Preliminary X-ray Diffraction Studies of Recombinant 19 kDa Human Fibroblast Collagenase, **236**, 1410–1412.

MDR transmembrane segments
See also Multi drug resistance.
Transmembrane Aromatic Amino Acid Distribution in P-glycoprotein. A Functional Role in Broad Substrate Specificity, **235**, 554–564.

Mean field approximation
Application of a Self-consistent Mean Field Theory to Predict Protein Side-chains Conformation and Estimate Their Conformational Entropy, **239**, 249–275.

Melanoma
The Solution Structure of Melanoma Growth Stimulating Activity, **242**, 252–270.

Melittin
Structure and Orientation of the Pore-forming Peptide, Melittin, in Lipid Bilayers, **241**, 456–466.

Membrane channel
Electrostatic Properties of Two Porin Channels from *Escherichia coli*, **240**, 372–384.
Refined Structure of the Porin from *Rhodopseudomonas blastica*. Comparison with the Porin from *Rhodobacter capsulatus*, **243**, 891–905.

Membrane protein
Crystallization and Preliminary X-ray Investigation of a Recombinant Outer Membrane Protein from *Neisseria meningitis*, **235**, 1154–1155.

Membrane proteins
See also Outer membrane.
Rotational Orientation of Transmembrane α-helices in Bacteriorhodopsin. A Neutron Diffraction Study, **236**, 1093–1104.
Prediction of the Positioning of the Seven Transmembrane α-helices of Bacteriorhodopsin. A Molecular Simulation Study, **236**, 1105–1122.
Prediction of Transmembrane Segments in Proteins Utilising Multiple Sequence Alignments, **237**, 182–192.
Electron Microscopy of Cytochrome *c* Oxidase Crystals. Monomer–Dimer Relationship and Cytochrome *c* Binding Site, **237**, 275–297.
Crystallization of Mitochondrial Cytochrome b-c_1 Complex from Gel With or Without Reduced Pressure, **243**, 802–805.
New Crystal Forms and Preliminary X-ray Diffraction Studies of Mitochondrial Cytochrome bc_1 Complex from Bovine Heart, **244**, 238–241.

Membrane topology
Structure Characterization of Membrane Bound and Surface Adsorbed Protein, **237**, 1–4.

Membrane-associated protein
Crystallographic Characterization of Pertactin, a Membrane-associated Protein from *Bordetella pertussis*, **235**, 772–773.

Membrane-binding domain
Membrane-bound Form of the Pore-forming Domain of Colicin A. A Neutron Scattering Study, **235**, 898–907.
Three-dimensional Structure of the Human Immunodeficiency Virus Type 1 Matrix Protein, **244**, 198–223.

Membranes
X-ray Structure at 1·55 Å of Toxin γ, a Cardiotoxin from *Naja nigricollis* Venom. Crystal Packing Reveals a Model for Insertion into Membranes, **239**, 122–136.

meta
Preliminary Crystallographic Analysis of 4-Oxalocrotonate Tautomerase Reveals the Oligomeric Structure of the Enzyme, **243**, 799–801.

Metal ion coordination
Stabilization of RNA Structure by Mg Ions. Specific and Non-specific Effects, **237**, 577–587.

Metalloenzyme
Crystallization and Preliminary X-ray Analysis of Protocatechuate 3,4-Dioxygenase from *Acinetobacter calcoaceticus*, **236**, 372–373.
Crystallization and Preliminary X-ray Analysis of *Candida albicans* Phosphomannose Isomerase, **237**, 349–350.

Metalloprotein
Conserved Patterns in the Cu,Zn Superoxide Dismutase Family, **238**, 366–386.
Structure of Protocatechuate 3,4-Dioxygenase from *Pseudomonas aeruginosa* at 2·15 Å Resolution, **244**, 586–608.

Metalloproteinase
Crystal Structure of the 50 kDa Metallo Protease from *Serratia marcescens*, **242**, 244–251.

Metals
Characterization of the Tryptophan Fluorescence and Hydrodynamic Properties of Rat DNA Polymerase β, **244**, 224–235.

Methane mono-oxygenase hydroxylase
Preliminary Crystallographic Analysis of Methane Mono-oxygenase Hydroxylase from *Methylosinus trichosporium* OB3b, **236**, 379–381.

Methanosarcina mazei
Identification of a *grpE* Heat-shock Gene Homolog in the Archaeon *Methanosarcina mazei*, **240**, 95–101.

Methionine-rich regions
Two-dimensional NMR Studies of Selenomethionyl Calmodulin, **239**, 545–554.

Methionyl-tRNA synthetase
Methionyl-tRNA Synthetase Needs an Intact and Mobile $_{332}$KMSKS$_{336}$ Motif in Catalysis of Methionyl Adenylate Formation, **242**, 566–577.

Methylase
Perpetuation of Cytosine Methylation in *Ascobolus immersus* Implies a Novel Type of Maintenance Methylase, **240**, 42–51.
The *DIM1* Gene Responsible for the Conserved $m^6{}_2Am^6{}_2A$ Dimethylation in the 3′-Terminal Loop of 18 S rRNA is Essential in Yeast, **241**, 492–497.

Methylation protection
Transcription of the *xyl* Operon is Controlled in *Bacillus subtilis* by Tandem Overlapping Operators Spaced by Four Base-pairs, **243**, 413–424.

***Methylosinus trichosporium* OB3b**
Preliminary Crystallographic Analysis of Methane Mono-oxygenase Hydroxylase from *Methylosinus trichosporium* OB3b, **236**, 379–381.

O^4-Methylthymine
Adenine·Methylthymine Base-pairs Enhance Non-uniformity in DNA Helices, **239**, 37–51.

Methyltransferase
See also DNA methyltransferase.
Ligand-induced Conformational States of the Cytosine-specific DNA methyltransferase M.*Hga*I-2, **235**, 545–553.
The Domains of a Type I DNA Methyltransferase. Interactions and Role in Recognition of DNA Methylation, **236**, 1011–1021.
A Symmetrical Model for the Domain Structure of Type I DNA Methyltransferases, **243**, 1–5.
Bacterial Expression of Catalytically Active Fragments of the Multifunctional Enzyme Enniatin Synthetase, **243**, 116–122.

Metzincins
Refined 2·0 Å X-ray Crystal Structure of the Snake Venom Zinc-endopeptidase Adamalysin II. Primary and Tertiary Structure Determination, Refinement, Molecular Structure and Comparison with Astacin, Collagenase and Thermolysin, **239**, 513–544.

MGSA/GRO
The Solution Structure of Melanoma Growth Stimulating Activity, **242**, 252–270.

Mg-tetrapyrrole
Directed Mutational Analysis of Bacteriochlorophyll *a* Biosynthesis in *Rhodobacter capsulatus*, **237**, 622–640.

MHC class I
Five Viral Peptide–HLA-A2 Co-crystals. Simultaneous Space Group Determination and X-ray Data Collection, **239**, 581–587.

Microsatellite
Enrichment of Human DNAs that Flank Poly(dA)·poly(dT) Tracts by Triplex DNA Formation, **237**, 193–200.

Microtubule-associated protein (MAP) tau
Complete Sequence of 3′-Untranslated Region of Tau from Rat Central Nervous System. Implications for mRNA Heterogeneity, **241**, 325–331.

Microtubules
Solution Structure of GDP-tubulin Double Rings to 3 nm Resolution and Comparison with Microtubules, **238**, 214–225.
Kinesin Light Chain Isoforms in *Caenorhabditis elegans*, **240**, 507–512.

Microvilli
X-ray Diffraction Study of the Live Squid Retina, **238**, 139–144.

Mimicry
Structural Mimicry and Enhanced Immunogenicity of Peptide Epitopes Displayed on Filamentous Bacteriophage. The V3 Loop of HIV-1 gp120, **243**, 167–172.

Minicircles
Translational Control in Production of Transposase and in Transposition of Insertion Sequence IS*3*, **235**, 1406–1420.

Miniplasmids
Translational Control in Production of Transposase and in Transposition of Insertion Sequence IS*3*, **235**, 1406–1420.

Minor groove
A DNA Minor Groove-binding Ligand Both Potentiates and Arrests Transcription by RNA Polymerase II. Elongation Factor SII Enables Readthrough at Arrest Sites, **236**, 725–737.
Studies of the Interactions Between *Escherichia coli* Ribonuclease HI and Its Substrate, **243**, 782–791.

Minus strand RNA
Identification of Recognition Elements on Bacteriophage Qβ Minus Strand RNA that are Essential for Template Activity with Qβ Replicase, **243**, 811–815.

Mistranslation
High Concentrations of ppGpp Decrease the RNA Chain Growth Rate. Implications for Protein Synthesis and Translational Fidelity During Amino Acid Starvation in *Escherichia coli*, **236**, 441–454.

Mitochondria
Expression of Mitochondrial Genes in the Germinating Conidia of *Neurospora crassa*, **235**, 881–897.
ATP Synthase from Bovine Heart Mitochondria. *In Vitro* Assembly of a Stalk Complex in the Presence of F_1-ATPase and in its Absence, **242**, 408–421.

Mitochondrial DNA
Complete Sequence of the Mitochondrial DNA of the Chlorophyte Alga *Prototheca wickerhamii*. Gene Content and Genome Organization, **237**, 75–86.
The Ribosomal RNA Gene Region in *Acanthamoeba castellanii* Mitochondrial DNA. A Case of Evolutionary Transfer of Introns between Mitochondria and Plastids?, **239**, 476–499.
Comparative Structure and Genomic Organization of the Discontinuous Mitochondrial Ribosomal RNA Genes of *Chlamydomonas eugametos* and *Chlamydomonas reinhardtii*, **241**, 298–311.
Transposable Group II Introns in Fission and Budding Yeast. Site-specific Genomic Instabilities and Formation of Group II IVS plDNAs, **243**, 157–166.

Mitochondrial respiratory chain
New Crystal Forms and Preliminary X-ray Diffraction Studies of Mitochondrial Cytochrome bc_1 Complex from Bovine Heart, **244**, 238–241.

Mitochondrial tRNA
Fitting the Structurally Diverse Animal Mitochondrial tRNAs^{Ser} to Common Three-dimensional Constraints, **236**, 982–989.

Mixed solvent
The Activity of Porcine Pancreatic Phospholipase A_2 in 20 % Alcohol/Aqueous Solvent, by Experiment and Electrostatics Calculations, **236**, 904–917.

Mobility
A Point Mutation at the Junction of Domain 2·3/2·4 of Transcription Factor σ^{70} Abrogates Productive Transcription and Restores its Expected Mobility on a Denaturing Gel, **242**, 9–22.

Model
A Quantitative Model of the *Escherichia coli* 16 S RNA in the 30 S Ribosomal Subunit, **240**, 308–340.

Modeling
Planar Stacking Interactions of Arginine and Aromatic Side-Chains in Proteins, **235**, 709–717.
Conformational Drug Determinants of the Sequence Specificity of Drug-stimulated Topoisomerase II DNA Cleavage, **235**, 1218–1230.
Refined 1·7 Å X-ray Crystallographic Structure of P-30 Protein, an Amphibian Ribonuclease with Anti-tumor Activity, **236**, 1141–1153.
Amino/Aromatic Interactions in Proteins: Is the Evidence Stacked Against Hydrogen Bonding?, **239**, 315–331.
Towards Atomic Interpretation of F-Actin Filament Three-dimensional Reconstructions, **242**, 683–700.
Molecular Modeling of RNA Polymerase II Mutations onto DNA Polymerase I, **244**, 13–22.
Investigating the High Affinity and Low Sequence Specificity of Calmodulin Binding to its Targets, **244**, 554–571.
TEM β-Lactamase Mutants Hydrolysing Third-generation Cephalosporins. A Kinetic and Molecular Modelling Analysis, **244**, 625–639.

Modified oligonucleotide
Studies of the Interactions Between *Escherichia coli* Ribonuclease HI and Its Substrate, **243**, 782–791.

Molecular assembly
Asymmetric Arrangement of Two Alpha Subunits within *Escherichia coli* RNA Polymerase. Involvement of One Alpha Subunit in Contact with cAMP Receptor Protein, **236**, 1283–1288.
Functional Map of the Alpha Subunit of *Escherichia coli* RNA Polymerase. Deletion Analysis of the Amino-terminal Assembly Domain, **242**, 107–115.

Molecular chaperones
See also Chaperones.
The Symmetry of *Escherichia coli* cpn60 (GroEL) Determined by X-ray Crystallography, **235**, 47–52.
Specificity of DnaK–peptide Binding, **235**, 848–854.
Thermodynamic Partitioning Model for Hydrophobic Binding of Polypeptides by GroEL. I. GroEL Recognizes the Signal Sequences of β-lactamase Precursor, **242**, 150–164.
Thermodynamic Partitioning Model for Hydrophobic Binding of Polypeptides by GroEL. II. GroEL Recognizes Thermally Unfolded Mature β-lactamase, **242**, 165–174.
Correctly Folded T-cell Receptor Fragments in the Periplasm of *Escherichia coli*. Influence of Folding Catalysts, **242**, 655–669.

Molecular clock
Molecular Phylogeny of the Alphaherpesvirinae Subfamily and a Proposed Evolutionary Timescale, **238**, 9–22.

Molecular cloning, *See* Cloning

Molecular dynamics
Backbone Flexibility and Stability of Reverse Turn Conformation in a Model System, **235**, 682–694.
Translational and Rotational Diffusion of Proteins, **236**, 629–636.
Investigation of Shape Variations in the Antibody Binding Site by Molecular Dynamics Computer Simulation, **236**, 1186–1195.
The High-resolution Structure of the Histidine-containing Phosphocarrier Protein HPr from *Escherichia coli* Determined by Restrained Molecular Dynamics from Nuclear Magnetic Resonance Overhauser Effect Data, **237**, 544–559.
Adenine·Methylthymine Base-pairs Enhance Non-uniformity in DNA Helices, **239**, 37–51.
Decomposition of the Free Energy of a System in Terms of Specific Interactions. Implications for Theoretical and Experimental Studies, **240**, 167–176.
Simultaneous Refinement of the Structure of BPTI Against NMR Data Measured in Solution and X-ray Diffraction Data Measured in Single Crystals, **241**, 588–599.
Solution Structure and Hydration Patterns of a Pyrimidine·Purine·Pyrimidine DNA Triplex Containing a Novel T·CG Base-triple, **241**, 600–619.
Liquid-like Side-chain Dynamics in Myoglobin, **242**, 181–185.
Solution Structure of the d(T-C-G-A) Duplex at Acidic pH. A Parallel-Stranded Helix Containing $C^+ \cdot C$, $G \cdot G$ and $A \cdot A$ Pairs, **242**, 508–526.
Helicity, Circular Dichroism and Molecular Dynamics of Proteins, **243**, 173–178.
Investigating the High Affinity and Low Sequence Specificity of Calmodulin Binding to its Targets, **244**, 554–571.

Molecular evolution, *see* Evolution

Molecular graphics
Fitting the Structurally Diverse Animal Mitochondrial $tRNAs^{Ser}$ to Common Three-dimensional Constraints, **236**, 982–989.

Molecular immunoelectron microscopy, *see* Immunoelectron microscopy

Molecular mechanics
Analysis of Two-residue Turns in Proteins, **238**, 733–747.
A Quantitative Model of the *Escherichia coli* 16 S RNA in the 30 S Ribosomal Subunit, **240**, 308–340.

Molecular modeling, *see* Modeling

Molecular motors
Isolation, Characterization and Structure of Bacterial Flagellar Motors Containing the Switch Complex, **235**, 1261–1270.

Molecular packing
Crystallization and Molecular Packing Analysis of Barstar Crystals, **243**, 533–536.

Molecular recognition
Molecular Recognition by Thrombin. Role of the Slow→Fast Transition, Site-specific Ion Binding Energetics and Thermodynamic Mapping of Structural Components, **235**, 733–746.
PUZZLE: A New Method for Automated Protein Docking Based on Surface Shape Complementarity, **235**, 1021–1031.
Structural Dependence of Post-translational Modification and Reductive Acetylation of the Lipoyl Domain of the Pyruvate Dehydrogenase Multienzyme Complex, **236**, 209–216.
Molecular Recognition in Proteins. Simulation Analysis of Substrate Binding by a Tyrosyl-tRNA Synthetase Mutant, **236**, 1049–1066.
The Use of Composite Crystal-field Environments in Molecular Recognition and the *de Novo* Design of Protein Ligands, **237**, 212–235.
A Thermodynamic Study of the *trp* Repressor–Operator Interaction, **238**, 669–681.
Rational Automatic Search Method for Stable Docking Models of Protein and Ligand, **243**, 310–326.
Structure-mapping of the Hairpin Ribozyme. Magnesium-dependent Folding and Evidence for Tertiary Interactions within the Ribozyme-Substrate Complex, **244**, 52–63.

Molecular replacement
Refined Crystal Structure of Rat Parvalbumin, a Mammalian α-lineage Parvalbumin, at 2·0 Å Resolution, **235**, 718–732.
Crystal Structure and Refinement of Cytochrome $P450_{terp}$ at 2·3 Å Resolution, **236**, 1169–1185.
Horse Pancreatic Lipase. The Crystal Structure Refined at 2·3 Å Resolution, **238**, 709–732.
Preliminary Crystallographic Analysis of Manganese Peroxidase from *Phanerochaete chrysosporium*, **238**, 845–848.
Crystallization and Structure Determination of Bovine Profilin at 2·0 Å Resolution, **240**, 459–475.
The Thumb's Knuckle. Flexibility in the Thumb Subdomain of T7 RNA Polymerase is Revealed by the Structure of a Chimeric T7/T3 RNA Polymerase, **244**, 6–12.

The Molecular Replacement Solution and X-ray Refinement to 2·8 Å of a Decameric Complex of Human Cyclophilin A with the Immunosuppressive Drug Cyclosporin A, **244**, 385–409.

Molecular signalling
Local and Transmitted Conformational Changes on Complexation of an Anti-sweetener Fab, **236**, 247–274.

Molecular surface complementarity
MONTY: A Monte Carlo Approach to Protein-DNA Recognition, **235**, 318–324.

Molten globule
Characterization of a Trifluoroethanol-induced Partially Folded State of α-Lactalbumin, **235**, 587–599.
Thermodynamic Puzzle of Apomyoglobin Unfolding, **235**, 1318–1325.
Unfolding-refolding Kinetics of the Tryptophan Synthase α Subunit by CD and Fluorescence Measurements, **236**, 1227–1240.
Comparison of the Conformational Stability of the Molten Globule and Native States of Horse Cytochrome *c*. Effects of Acetylation, Heat, Urea and Guanidine-Hydrochloride, **237**, 336–348.
Molecular Mechanisms of Acid Denaturation. The Role of Histidine Residues in the Partial Unfolding of Apomyoglobin, **237**, 588–601.
Structural Origins of pH and Ionic Strength Effects on Protein Stability. Acid Denaturation of Sperm Whale Apomyoglobin, **237**, 602–614.
Arc Repressor will not Denature Under Pressure in the Absence of Water, **240**, 184–187.
Unfolding Pathway of Apomyoglobin. Simultaneous Characterization of Acidic Conformational States by Frequency Domain Fluorometry, **241**, 103–109.
Thermodynamic Partitioning Model for Hydrophobic Binding of Polypeptides by GroEL. I. GroEL Recognizes the Signal Sequences of β-lactamase Precursor, **242**, 150–164.
Thermodynamic Partitioning Model for Hydrophobic Binding of Polypeptides by GroEL. II. GroEL Recognizes Thermally Unfolded Mature β-lactamase, **242**, 165–174.
Residual Structure in a Staphylococcal Nuclease Fragment. Is It a Molten Globule and is Its Unfolding a First-order Phase Transition?, **243**, 93–99.

***mom* gene**
Control of Translation by mRNA Secondary Structure in *Escherichia coli*. A Quantitative Analysis of Literature Data, **244**, 144–150.

Δ-Momorcharin
Crystallization and Preliminary Crystallographic Study of β-Momorcharin, **238**, 284–285.

Monoamine oxidase
Crystallization and Preliminary X-ray Analysis of Copper Amine Oxidase from *Escherichia coli* K-12, **238**, 635–637.

Monoclonal antibodies
Selection of Phage-displayed Antibodies Specific for a Cytoskeletal Antigen by Competitive Elution with a Monoclonal Antibody, **244**, 353–360.

Monoclonal antibody
Idiotope Determining Regions of a Mouse Monoclonal Antibody and Its Humanized Versions. Identification of Framework Residues that Affect Idiotype Expression, **235**, 53–60.
A Monoclonal Antibody Epitope on Keratin 8 Identified Using a Phage Peptide Library, **235**, 61–67.
Crystallization and Preliminary X-ray Analysis of the Monoclonal Anti-tumor Antibody BR96 and its Complex with the Le^y Determinant, **235**, 372–376.
An Epitope Proximal to the Carboxyl Terminus of the α-Subunit is Located near the Lobe Tips of the Phosphorylase Kinase Hexadecamer, **235**, 974–982.
Identification, Molecular Cloning, Expression and Chromosome Mapping of a Family of Transformation Upregulated hnRNP-K Proteins Derived by Alternative Splicing, **236**, 33–48.
Crystallization and Preliminary X-ray Analysis of the Fab Fragment of a Human Monoclonal IgM Rheumatoid Factor (2A2), **242**, 706–708.
Three-dimensional Structures of the Free and the Antigen-complexed Fab from Monoclonal Anti-lysozyme Antibody D44.1, **243**, 767–781.

Monomeric mollusc hemoglobin
Structure of the Sulfide-reactive Hemoglobin from the Clam *Lucina pectinata*. Crystallographic Analysis at 1·5 Å Resolution, **244**, 86–99.

Monte Carlo methods
MONTY: A Monte Carlo Approach to Protein-DNA Recognition, **235**, 318–324.
The Twist, Writhe and Overall Shape of Supercoiled DNA Change During Counterion-induced Transition from a Loosely to a Tightly Interwound Superhelix. Possible Implications for DNA Structure *in Vivo*, **235**, 825–847.
Biased Probability Monte Carlo Conformational Searches and Electrostatic Calculations for Peptides and Proteins, **235**, 983–1002.
Prediction of Protein Side-chain Conformations from Local Three-dimensional Homology Relationships, **235**, 1088–1097.
The Origins of Protein Secondary Structure. Effects of Packing Density and Hydrogen Bonding Studied by a Fast Conformational Search, **241**, 214–225.
Computer Simulation of Protein-induced Structural Changes in Closed Circular DNA, **242**, 271–290.

Morphogenesis
To Build a Virus Capsid. An Equilibrium Model of the Self Assembly of Polyhedral Protein Complexes, **241**, 59–67.

Motility
A Mutant Hook-associated Protein (HAP3) Facilitates Torsionally Induced Transformations of the Flagellar Filament of *Escherichia coli*, **238**, 173–186.

Mouse population genetics
The Dynamics of Murine LINE-1 Subfamily Amplification, **241**, 390–397.

mRNA binding proteins
Control of Nucleo-cytoplasmic *HLA-DRA* mRNA Partitioning by Interaction of a Retention Signal with Compartmentalized Proteins, **240**, 193–204.

mRNA degradation
Nucleolytic Inactivation and Degradation of the RNase III Processed *pnp* Message Encoding Polynucleotide Phosphorylase of *Escherichia coli*, **239**, 439–454.

mRNA expression
The OZF Gene Encodes a Protein Consisting Essentially of Zinc Finger Motifs, **236**, 399–404.

mRNA processing
Nucleolytic Inactivation and Degradation of the RNase III Processed *pnp* Message Encoding Polynucleotide Phosphorylase of *Escherichia coli*, **239**, 439–454.

mRNA secondary structure
Control of Translation by mRNA Secondary Structure in *Escherichia coli*. A Quantitative Analysis of Literature Data, **244**, 144–150.

mRNA stability
Correlation of Translation Efficiency with the Decay of *lacZ* mRNA in *Escherichia coli*, **239**, 608–622.

mRNA structure
Features in the 5′ Non-coding Sequences of Rabbit α and β-Globin mRNAs that Affect Translational Efficiency, **235**, 95–110.
Post-transcriptional Regulation of the *str* Operon in *Escherichia coli*. Structural and Mutational Analysis of the Target Site for Translational Repressor S7, **235**, 125–139.
Thermodynamics of Folding a Pseudoknotted mRNA Fragment, **241**, 246–262.

mRNA transport
Control of Nucleo-cytoplasmic *HLA-DRA* mRNA Partitioning by Interaction of a Retention Signal with Compartmentalized Proteins, **240**, 193–204.

mrs
Host-inhibitory Functions Encoded by Promiscuous Plasmids. Transient Arrest of *Escherichia coli* Segregants that Fail to Inherit Plasmid RK2, **237**, 52–64.

Mu A tetramerization
DNA-Protein Cooperativity in the Assembly and Stabilization of Mu Strand Transfer Complex. Relevance of DNA Phasing and *att* Site Cleavage, **238**, 514–527.

Multi drug resistance
Transmembrane Aromatic Amino Acid Distribution in P-glycoprotein. A Functional Role in Broad Substrate Specificity, **235**, 554–564.

Multicatalytic proteinase
20 S Proteasomes are Assembled *via* Distinct Precursor Complexes. Processing of LMP2 and LMP7 Proproteins Takes Place in 13–16 S Preproteasome Complexes, **236**, 975–981.
Isolation and Characterization of α-Type HC3 abd β-Type HC5 Subunit Genes of Human Proteasomes, **244**, 117–124.

Multidrug resistance
Preliminary Crystallographic Analysis of a Fab Specific for P-glycoprotein With and Without Bound Peptide, **241**, 736–738.

Multinuclear NMR
Backbone Dynamics of a Highly Disordered 131 Residue Fragment of Staphylococcal Nuclease, **242**, 527–546.

Multiple initiation sites
Complete Sequence of 3′-Untranslated Region of Tau from Rat Central Nervous System. Implications for mRNA Heterogeneity, **241**, 325–331.

Multiple isomorphous replacement
The Monofunctional Chorismate Mutase from *Bacillus subtilis*. Structure Determination of Chorismate Mutase and Its Complexes with a Transition State Analog and Prephenate, and Implications for the Mechanism of the Enzymatic Reaction, **240**, 476–500.

Multiple polyadenylation sites
Complete Sequence of 3′-Untranslated Region of Tau from Rat Central Nervous System. Implications for mRNA Heterogeneity, **241**, 325–331.

Multiple sequence alignment
Hidden Markov Models in Computational Biology. Applications to Protein Modeling, **235**, 1501–1531.
Prediction of Transmembrane Segments in Proteins Utilising Multiple Sequence Alignments, **237**, 182–192.
Position-based Sequence Weights, **243**, 574–578.

Murine Leukemia Virus
Analytical Study of Rat Retrotransposon VL30 RNA Dimerization *in Vitro* and Packaging in Murine Leukemia Virus, **240**, 434–444.

Muscle
The Orientation of Spin-probes Attached to Cys374 on Actin in Oriented Gels, **236**, 703–709.
Gold/Fab Immuno Electron Microscopy Localization of Troponin H and Troponin T in *Lethocerus* Flight Muscle, **239**, 52–67.

Muscle contraction
Equatorial A-band and I-band X-ray Diffraction from Relaxed and Active Fish Muscle. Further Details of Myosin Crossbridge Behaviour, **239**, 500–512.
Tropomyosin Length and Two-stranded F-actin Flexibility in the Thin Filament, **243**, 520–529.

Muscle mutant
A Charge Change in an Evolutionarily-conserved Region of the Myosin Globular Head Prevents Myosin and Thick Filament Accumulation in *Drosophila*, **236**, 697–702.

Mutagenesis
See also Mutagenesis.
Evidence for Strained Interactions between Side-chains and the Polypeptide Backbone, **235**, 27–32.
The Role of Glu187 in the Regulation of Phosphofructokinase by Phosphoenolpyruvate, **235**, 68–72.
Dominant Negative Allele of the *Escherichia coli uvrD* Gene Encoding DNA Helicase II. A Biochemical and Genetic Characterization, **235**, 424–435.
Linker Insertion Mutagenesis of *Drosophila* Topoisomerase II. Probing The Structure of Eukaryotic Topoisomerase II, **235**, 436–447.
Effect of Single DNA Lesions on *in Vitro* Replication with DNA Polymerase III Holoenzyme. Comparison with other Polymerases, **236**, 151–164.
Proximal and Distal Effects of Sequence Context on Ultraviolet Mutational Hotspots in a Shuttle Vector Replicated in Xeroderma Cells, **236**, 491–502.
Pyrimidine Ring Fragmentation Products. Effects of Lesion Structure and Sequence Context on Mutagenesis, **236**, 514–530.
Specialized Ribosomes Allow for the Study of Mutations in Functionally Important Regions in 16 S rRNA, without Affecting Cell Growth. The Identification of Functional Regions in the Central Domain of 16 S rRNA, **237**, 368–377.
Linking an Easily Detectable Phenotype to the Folding of a Common Structural Motif. Selection of Rare Turn Mutations that Prevent the Folding of Rop, **237**, 378–387.
Structural and Electrophysiological Analysis of Annexin V Mutants. Mutagenesis of Human Annexin V, an *in Vitro* Voltage-gated Calcium Channel, Provides Information about the Structural Features of the Ion Pathway, the Voltage Sensor and the Ion Selectivity Filter, **237**, 479–499.
High Resolution Mapping of UV-induced Photoproducts in the *Escherichia coli lacI* Gene. Inefficient Repair of the Non-transcribed Strand Correlates with High Mutation Frequency, **238**, 319–332.
Ultrafast Measurements of Geminate Recombination of NO with Site-specific Mutants of Human Myoglobin, **238**, 437–444.
Coding Properties of a Unique Apurinic/Apyrimidinic Site Replicated in Mammalian Cells, **240**, 416–420.
Single Base-Pair Deletions Induced by Bleomycin at Potential Double-strand Cleavage Sites in the *aprt* Gene of Stationary Phase Chinese Hamster Ovary D422 Cells, **243**, 216–226.
Domains of Interaction between Alpha Interferon and its Receptor Components, **243**, 245–257.
Two Lines of Allosteric Communication in the Oligomeric Chaperonin GroEL are Revealed by the Single Mutation Arg196→Ala, **243**, 397–401.
Site-Directed Mutagenesis and ^{1}H Nuclear Magnetic Resonance of an Anti-Dinitrophenyl Spin Label Antibody, **244**, 301–318.

Mutants
Cavity Mutants of Savinase™. Crystal Structures and Differential Scanning Calorimetry Experiments Give Hints of the Function of the Buried Water Molecules in Subtilisins, **242**, 193–202.

Mutarotase
Dependence of Lactose Metabolism upon Mutarotase Encoded in the *gal* Operon in *Escherichia coli*, **244**, 269–278.

Mutation
Correlated mutations.
Oxygen Radical Induced Mutagenesis is DNA Polymerase Specific, **235**, 33–41.
Delayed Triple Helix Formation of Mutant Collagen from Patients with Osteogenesis Imperfecta, **236**, 940–949.
Genetic Studies on the Poliovirus 2C Protein, an NTPase, **236**, 1310–1323.
Mutagenesis of the Paracrystalline Surface Protein Array of *Aeromonas salmonicida* by Endogenous Insertion Elements, **237**, 452–463.
Adenine·Methylthymine Base-pairs Enhance Non-uniformity in DNA Helices, **239**, 37–51.

Connecting Anticodon Recognition with the Active Site of *Escherichia coli* Glutaminyl-tRNA Synthetase, **240**, 111–118.
Production of UV-induced Frameshift Mutations *in Vitro* by DNA Polymerases Deficient in 3′→5′ Exonuclease Activity, **240**, 226–242.
Gene Activation by the *Escherichia coli* Positive Regulator, OmpR. Phosphorylation-independent Mechanism of Activation by an OmpR Mutant, **242**, 607–613.
Electrophoretic Characterization of the Denatured States of Staphylococcal Nuclease, **242**, 670–682.
Cross-hypersensitivity Effects of Mutations in 23 S rRNA Yield Insight into Aminoacyl-tRNA Binding, **244**, 151–157.

Mutation pressure
Transfer RNA Mutation and the Malleability of the Genetic Code, **235**, 1377–1380.

Mutational analyses
Molecular Recognition in Proteins. Simulation Analysis of Substrate Binding by a Tyrosyl-tRNA Synthetase Mutant, **236**, 1049–1066.
Mutational Analysis of the Fingers and Palm Subdomains of Human Immunodeficiency Virus Type-1 (HIV-1) Reverse Transcriptase, **243**, 472–483.

Mutations
Direct and Indirect Effects of Mutations in λ P_{RM} on Open Complex Formation at the Divergent P_R Promoter, **240**, 119–126.

c-myc
Human Immunodeficiency Virus Type 1 Tat Directs Transcription Through Attenuation Sites within the Mouse c-myc Gene, **243**, 568–573.

Mycobacterium tuberculosis
Crystallization and Preliminary X-ray Analysis of the Superoxide Dismutase from *Mycobacterium tuberculosis*, **235**, 1156–1158.

Myoglobin
Structural Origins of pH and Ionic Strength Effects on Protein Stability. Acid Denaturation of Sperm Whale Apomyoglobin, **237**, 602–614.
Ultrafast Measurements of Geminate Recombination of NO with Site-specific Mutants of Human Myoglobin, **238**, 437–444.
Liquid-like Side-chain Dynamics in Myoglobin, **242**, 181–185.

Myosin
A Charge Change in an Evolutionarily-conserved Region of the Myosin Globular Head Prevents Myosin and Thick Filament Accumulation in *Drosophila*, **236**, 697–702.
Equatorial A-band and I-band X-ray Diffraction from Relaxed and Active Fish Muscle. Further Details of Myosin Crossbridge Behaviour, **239**, 500–512.
A Myosin from a Higher Plant has Structural Similarities to Class V Myosins, **239**, 591–597.
Cloning and mRNA Expression of Human Unconventional Myosin-IC. A Homologue of Amoeboid Myosins-I With a Single IQ Motif and an SH3 Domain, **243**, 356–363.

Myosin-IA
The Molecular Cloning and Characterization of *Drosophila melanogaster* Myosin-IA and Myosin-IB, **239**, 347–356.

Myosin-IB
The Molecular Cloning and Characterization of *Drosophila melanogaster* Myosin-IA and Myosin-IB, **239**, 347–356.

Myosin-IC
Cloning and mRNA Expression of Human Unconventional Myosin-IC. A Homologue of Amoeboid Myosins-I With a Single IQ Motif and an SH3 Domain, **243**, 356–363.

Myristoylation
Myristoylation-dependent Binding of HIV-1 Nef to CD4, **241**, 136–142.

NAD metabolism
Crystallization and X-ray Crystallographic Analysis of Recombinant Chicken Poly (ADP-ribose) Polymerase Catalytic Domain Produced in Sf9 Insect Cells, **244**, 114–116.

NAD-dependent dehydrogenases
High Resolution Structures of Holo and Apo Formate Dehydrogenase, **236**, 759–785.

NADPH : FMN oxidoreductase
Crystallization and Preliminary Crystallographic Analysis of NADPH : FMN Oxidoreductase from *Vibrio harveyi*, **241**, 283–287.

NAD(P)H-quinone reductase
Crystallization and Preliminary Crystallographic Data for an FMN-dependent Nitroreductase Enzyme from *Escherichia coli* B, **238**, 852–853.

Nef
Myristoylation-dependent Binding of HIV-1 Nef to CD4, **241**, 136–142.

Negative staining
Towards Atomic Interpretation of F-Actin Filament Three-dimensional Reconstructions, **242**, 683–700.

Negative superhelicity
Multiple DNA Conformational Changes Induced by an Initiator Protein Precede the Nicking Reaction in a Rolling Circle Replication Origin, **237**, 388–400.

Neighbor-dependent substitutions
Wide Variations in Neighbor-dependent Substitution Rates, **236**, 1022–1033.

Neisseria meningitidis
Crystallization and Preliminary X-ray Investigation of a Recombinant Outer Membrane Protein from *Neisseria meningitis*, **235**, 1154–1155.

Nematode
Tc1 Transposon-like Sequences are Widely Distributed in Salmonids, **241**, 26–34.

Nerve growth factor
Nerve Growth Factor in Different Crystal Forms Displays Structural Flexibility and Reveals Zinc Binding Sites, **239**, 385–400.

Neural networks
Protein Secondary Structure from Circular Dichroism Spectroscopy. Combining Variable Selection Principle and Cluster Analysis with Neural Network, Ridge Regression and Self-consistent Methods, **242**, 497–507.
Neural Network Model of the Genetic Code is Strongly Correlated to the GES Scale of Amino Acid Transfer Free Energies, **243**, 816–820.

Neuraminidase
Defining the Requirements for an Antibody Epitope on Influenza Virus Neuraminidase: How Tolerant are Protein Epitopes?, **235**, 747–759.
Protein Hydration Observed by X-ray Diffraction. Solvation Properties of Penicillopepsin and Neuraminidase Crystal Structures, **243**, 100–115.

Neurospora
Expression of Mitochondrial Genes in the Germinating Conidia of *Neurospora crassa*, **235**, 881–897.

Neurospora
A *Cis*-acting Region Required for the Regulated Expression of *grg-1*, a Neurospora Glucose-repressible Gene. Two Regulatory Sites (CRE and NRS) are Required to Repress *grg-1* Expression, **237**, 65–74.

Neurotoxin
Cardiotoxin III from the Taiwan Cobra (*Naja naja atra*). Determination of Structure in Solution and Comparison with Short Neurotoxins, **235**, 1291–1301.

Neurotransmitter transporter
A Creatine Transporter cDNA from *Torpedo* Illustrates Structure/Function Relationships in the GABA/Noradrenaline Transporter Family, **241**, 317–324.

Neutral mutation
Bona Fide Prediction of Aspects of Protein Conformation. Assigning Interior and Surface Residues from Patterns of Variation and Conservation in Homologous Protein Sequences, **235**, 926–958.

Neutralization
Structure Determination of an Fab Fragment that Neutralizes Human Rhinovirus 14 and Analysis of the Fab-Virus Complex, **240**, 127–137.

Neutron crystallography
Rotational Orientation of Transmembrane α-helices in Bacteriorhodopsin. A Neutron Diffraction Study, **236**, 1093–1104.

Neutron scattering
Membrane-bound Form of the Pore-forming Domain of Colicin A. A Neutron Scattering Study, **235**, 898–907.
Structural Model of the 50 S Subunit of *Escherichia coli* Ribosomes from Solution Scattering. II. Neutron Scattering Study, **240**, 78–86.
Liquid-like Side-chain Dynamics in Myoglobin, **242**, 181–185.
Stability against Denaturation Mechanisms in Halophilic Malate Dehydrogenase Adapt to Solvent Conditions, **244**, 436–447.

Neutrophins
Nerve Growth Factor in Different Crystal Forms Displays Structural Flexibility and Reveals Zinc Binding Sites, **239**, 385–400.

Neutrotrophic factor
Crystallization and Preliminary X-ray Analysis of apo-S100β and S100β with Ca^{2+}, **236**, 953–957.

Nickel chemotaxis
Crystallization and Preliminary X-ray Diffraction Study of the Nickel-binding Protein NikA of *Escherichia coli*, **243**, 353–355.

Nickel-DNA conformation
Conformational Analysis of a 139 Base-pair DNA Fragment Containing a Single-stranded Break and Its Interaction with Human Poly(ADP-ribose) Polymerase, **235**, 1062–1071.

[NiFe]hydrogenase
The *hypE* Gene Completes the Gene Cluster for H_2-oxidation in *Azotobacter vinelandii*, **236**, 390–396.

Nitrate
In Vitro Interaction of Nitrate-responsive Regulatory Protein NarL with DNA Target Sequences in the *fdnG*, *narG*, *narK* and *frdA* Operon Control Regions of *Escherichia coli* K-12, **241**, 150–165.

Nitric oxide reductase
Crystallization and Preliminary X-ray Diffraction Studies of Nitric Oxide Reductase Cytochrome P450nor from *Fusarium oxysporum*, **239**, 158–159.

Nitrite reductase
Crystallization and Preliminary X-ray Analysis of a New Crystal form of Nitrite Reductase from *Pseudomonas aeruginosa*, **243**, 347–350.

***S*-(*p*-Nitrobenzyl)glutathione complex**
Molecular Structure at 1·8 Å of Mouse Liver Class Pi Glutathione S-transferase Complexed with *S*-(*p*-Nitrobenzyl)glutathione and Other Inhibitors, **237**, 298–314.

Nitrogen assimilation
Preliminary X-ray Diffraction Analysis of Crystals of the P_{II} Protein from *Escherichia coli*, **243**, 796–798.

Nitroguaiacol ether derivatives
Location of the Streptomycin Ribosomal Binding Site Explains its Pleiotropic Effects on Protein Biosynthesis, **235**, 1251–1260.

Nitroreductase
Crystallization and Preliminary Crystallographic Data for an FMN-dependent Nitroreductase Enzyme from *Escherichia coli* B, **238**, 852–853.

NMR, *see* Nuclear magnetic resonance

Nodaviruses
The Refined Three-Dimensional Structure of an Insect Virus at 2·8 Å Resolution, **235**, 565–586.

NOE
Protein Three-dimensional Structure Determination and Sequence-specific Assignment of ^{13}C and ^{15}N-separated NOE Data. A Novel Real-space *ab initio* Approach, **243**, 696–718.

Non-crystallographic symmetry
Preliminary Analysis of Multiple Crystal Forms of the Bovine Cyclophilin–Cyclosporin A Complex, **235**, 1136–1140.
Purification, Crystallization and Preliminary X-ray Analysis of Murine Interleukin-5, **241**, 269–272.
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Human Ornithine Aminotransferase, **243**, 128–130.
Crystallization and Molecular Packing Analysis of Barstar Crystals, **243**, 533–536.
Crystallization and Preliminary X-ray Analysis of a Mutant Duck δ II Crystallin, **243**, 944–946.

Non-essential residues
Genetic Studies of the *lac* Repressor. XIV. Analysis of 4000 Altered *Escherichia coli lac* Repressors Reveals Essential and Non-essential Residues, As Well As "Spacers" Which Do Not Require a Specific Sequence, **240**, 421–433.

Non-histones
The Footprint of Chromosomal Proteins HMG-14 and HMG-17 on Chromatin Subunits, **236**, 189–198.

Non-nucleoside inhibitor
Locations of Anti-AIDS Drug Binding Sites and Resistance Mutations in the Three-dimensional Structure of HIV-1 Reverse Transcriptase. Implications for Mechanisms of Drug Inhibition and Resistance, **243**, 369–387.

Non-polar interactions
Helix-stabilizing Interaction Between Tyrosine and Leucine or Valine when the Spacing is $i,i+4$, **241**, 706–713.

Non-random substitution effects
Wide Variations in Neighbor-dependent Substitution Rates, **236**, 1022–1033.

Normal mode calculations
The Contribution of Vibrational Entropy to Molecular Association. The Dimerization of Insulin, **238**, 405–414.

Notochord
Collagen Fibril Structure in Lamprey, **243**, 38–47.

Novel base quadruple
A Single 2′-Hydroxyl Group Converts *B*-DNA to *A*-DNA. Crystal Structure of the DNA-RNA Chimeric Decamer Duplex d(CCGGC)r(G)d(CCGG) with a Novel Intermolecular G·C Base-paired Quadruplet, **236**, 275–285.

Novel fold
High Level Expression and Rational Mutagenesis of a Designed Protein, the Minibody. From an Insoluble to a Soluble Molecule, **236**, 649–659.

Novobiocin
Three-dimensional Model of *Escherichia coli* Gyrase B Subunit Crystallized in Two-dimensions on Novobiocin-Linked Phospholipid Films, **236**, 618–628.

NRS
A *Cis*-acting Region Required for the Regulated Expression of *grg-1*, a Neurospora Glucose-repressible Gene. Two Regulatory Sites (CRE and NRS) are Required to Repress *grg-1* Expression, **237**, 65–74.

N-terminal extensions
Close Packing of an Oligomeric Eye Lens β-Crystallin Induces Loss of Symmetry and Ordering of Sequence Extensions, **236**, 1250–1258.

NTPase
Genetic Studies on the Poliovirus 2C Protein, an NTPase, **236**, 1310–1323.

Nuclear magnetic resonance
Solution Structure of Reactive-site Hydrolyzed Turkey Ovomucoid Third Domain by Nuclear Magnetic Resonance and Distance Geometry Methods, **242**, 215–230.

Nuclear Factor I
The Genes for Transcription Factor Nuclear Factor I Give Rise to Corresponding Splice Variants between Vertebrate Species, **238**, 860–865.

Nuclear localization signal
Three-dimensional Structure of the Human Immunodeficiency Virus Type 1 Matrix Protein, **244**, 198–223.

Nuclear magnetic resonance
^{1}H Nuclear Magnetic Resonance Studies of Hen Lysozyme-*N*-Acetylglucosamine Oligosaccharide Complexes in Solution. Application of Chemical Shifts for the Comparison of Conformational Changes in Solution and in the Crystal, **235**, 1072–1087.
Dynamical Structure of the Hinge Region of Immunoglobulin G as Studied by ^{13}C Nuclear Magnetic Resonance Spectroscopy, **236**, 300–309.
Solution Structure of Turkey Ovomucoid Third Domain as Determined from Nuclear Magnetic Resonance Data, **242**, 203–214.

2D Nuclear magnetic resonance
Polypeptide Conformational Space. Dynamics by Solution NMR Disorder by X-ray Crystallography, **241**, 431–439.

Nuclear magnetic resonance (NMR)
See also Protein NMR.
Conformational Behaviour of the Active and Inactive Forms of the Nucleocapsid NCp7 of HIV-1 Studied by ^{1}H NMR, **235**, 287–301.
Characterization of a Trifluoroethanol-induced Partially Folded State of α-Lactalbumin, **235**, 587–599.
^{1}H NMR Analysis of the Partly-folded Non-native Two-disulphide Intermediates (30-51,5-14) and (30-51,5-38) in the Folding Pathway of Bovine Pancreatic Trypsin Inhibitor, **235**, 1044–1061.
^{1}H Nuclear Magnetic Resonance Studies of Hen Lysozyme-*N*-Acetylglucosamine Oligosaccharide Complexes in Solution. Application of Chemical Shifts for the Comparison of Conformational Changes in Solution and in the Crystal, **235**, 1072–1087.
Cardiotoxin III from the Taiwan Cobra (*Naja naja atra*). Determination of Structure in Solution and Comparison with Short Neurotoxins, **235**, 1291–1301.
Solution Structure of a Pair of Fibronectin Type 1 Modules with Fibrin Binding Activity, **235**, 1302–1311.
The Nuclear Magnetic Resonance Solution Structure of the Mixed Disulfide between *Escherichia coli* Glutaredoxin(C14S) and Glutathione, **235**, 1585–1597.
The Solution Structure of the Tyr41→His Mutant of the Single-stranded DNA Binding Protein Encoded by Gene V of the Filamentous Bacteriophage M13, **236**, 229–246.
Formation of a Hydrophobic Cluster in Denatured Bovine Pancreatic Trypsin Inhibitor, **236**, 412–420.
Solution Structure of a *de Novo* Helical Protein by 2D-NMR Spectroscopy, **236**, 862–868.
Aspects of Receptor Binding and Signalling of Interleukin-4 Investigated by Site-Directed Mutagenesis and NMR Spectroscopy, **237**, 423–436.
The High-resolution Structure of the Histidine-containing Phosphocarrier Protein HPr from *Escherichia coli* Determined by Restrained Molecular Dynamics from Nuclear Magnetic Resonance Overhauser Effect Data, **237**, 544–559.
The Solution Structures of the *trp* Repressor-Operator DNA Complex, **238**, 592–614.
An Assessment of the Precision and Accuracy of Protein Structures Determined by NMR. Dependence on Distance Errors, **239**, 601–607.
Tertiary Structure of Erabutoxin b in Aqueous Solution as Elucidated by Two-dimensional Nuclear Magnetic Resonance, **240**, 155–166.
Solution Structure of the Type 1 Blue Copper Protein Amicyanin from *Thiobacillus versutus*, **240**, 358–371.
Structure of Cobra Cardiotoxin CTXI as Derived from Nuclear Magnetic Resonance Spectroscopy and Distance Geometry Calculations, **240**, 445–458.
DNA Sequence GCGAATGAGC Containing the Human Centromere Core Sequence GAAT Forms a Self-complementary Duplex with Sheared G·A Pairs in Solution, **241**, 467–479.
The Three-dimensional Solution Structure by ^{1}H NMR of a 6-kDa Proteinase Inhibitor Isolated from the Stigma of *Nicotiana alata*, **242**, 231–243.
The Solution Structure of Melanoma Growth Stimulating Activity, **242**, 252–270.
Helix Stop and Start Signals in Peptides and Proteins. The Capping Box does not Necessarily Prevent Helix Elongation, **242**, 487–496.
Solution Structure of a Parallel-Stranded Tetraplex Formed by d(TG_4T) in the Presence of Sodium Ions by Nuclear Magnetic Resonance Spectroscopy, **243**, 458–471.
Role of the Domain–Domain Interaction in the Construction of the Antigen Combining Site. A Comparative Study by ^{1}H-^{15}N Shift Correlation NMR Spectroscopy of the Fv and Fab Fragments of Anti-dansyl Mouse Monoclonal Antibody, **243**, 494–503.
Protein Three-dimensional Structure Determination and Sequence-specific Assignment of ^{13}C and ^{15}N-separated NOE Data. A Novel Real-space *ab initio* Approach, **243**, 696–718.
Stabilization of a Type VI Turn in a Family of Linear Peptides in Water Solution, **243**, 736–753.
Three-dimensional Structure of a Type VI Turn in a Linear Peptide in Water Solution. Evidence for Stacking of Aromatic Rings as a Major Stabilizing Factor, **243**, 754–766.
The Unusual Structure of the Human Centromere $(GGA)_2$ Motif. Unpaired Guanosine Residues Stacked Between Sheared G·A Pairs, **244**, 259–268.
Site-Directed Mutagenesis and ^{1}H Nuclear Magnetic Resonance of an Anti-Dinitrophenyl Spin Label Antibody, **244**, 301–318.
Nuclear Magnetic Resonance ^{15}N and ^{1}H Resonance Assignments and Global Fold of Rusticyanin. Insights into the Ligation and Acid Stability of the Blue Copper Site, **244**, 370–384.

Nuclear magnetic resonance (NMR)NMR
Amide Hydrogen Exchange in a Highly Denatured State. Hen Egg-white Lysozyme in Urea, **237**, 247–254.

Nuclear magnetic resonance refinement
Simultaneous Refinement of the Structure of BPTI Against NMR Data Measured in Solution and X-ray Diffraction Data Measured in Single Crystals, **241**, 588–599.

Nuclear magnetic resonance solution structure
Nuclear Magnetic Resonance Solution Structure of the *fushi tarazu* Homeodomain from *Drosophila* and Comparison with the *Antennapedia* Homeodomain, **238**, 333–345.
The Solution Structure of the r(gcg)d(TA-TACCC):d(GGGTATACGC) Okazaki Fragment Contains Two Distinct Duplex Morphologies Connected by a Junction, **241**, 440–455.

Nuclear magnetic resonance spectroscopy
Sequence Dependence of DNA Structure in Solution, **235**, 325–330.
Determination of the Nuclear Magnetic Resonance Structure of the DNA-binding Domain of the *P22 c2* Repressor (1 to 76) in Solution and Comparison with

the DNA-binding Domain of the *434* Repressor, **235**, 1003–1020.
Solution Structure of an Isolated Antibody V_L Domain, **236**, 310–327.
Analysis of the Solution Structure of Human Interleukin-4 Determined by Heteronuclear Three-dimensional Nuclear Magnetic Resonance Techniques, **238**, 23–41.
Solution Structure and Dynamics of PEC-60, a Protein of the Kazal Type Inhibitor Family, Determined by Nuclear Magnetic Resonance Spectroscopy, **239**, 137–153.
Structure and Orientation of the Pore-forming Peptide, Melittin, in Lipid Bilayers, **241**, 456–466.
Solution Structure and Hydration Patterns of a Pyrimidine·Purine·Pyrimidine DNA Triplex Containing a Novel T·CG Base-triple, **241**, 600–619.
Solution Structure of the d(T-C-G-A) Duplex at Acidic pH. A Parallel-Stranded Helix Containing $C^+ \cdot C$, G·G and A·A Pairs, **242**, 508–526.

Nuclear magnetic resonance structure determination
Biased Probability Monte Carlo Conformational Searches and Electrostatic Calculations for Peptides and Proteins, **235**, 983–1002.

Nuclear relocation
Protein Substitution in Chloroplast Ribosome Evolution. A Eukaryotic Cytosolic Protein has Replaced its Organelle Homologue (L23) in Spinach, **240**, 28–41.

Nuclear staphylococcal, *see* Staphylococcal nuclear

Nuclease
On the Location of Linker DNA in the Chromatin Fiber. Studies with Immobilized and Soluble Micrococcal Nuclease, **235**, 871–880.

Nuclease P_1
Unwound Regions in Yeast Centromere IV DNA, **243**, 179–189.

Nucleic acid binding
Preparation, Characterization and Crystallization of an Antibody Fab Fragment that Recognizes RNA. Crystal Structures of Native Fab and Three Fab-mononucleotide Complexes, **243**, 283–297.

Nucleic acid structure analysis
Nucleic Acid Structure Analysis. Mathematics for Local Cartesian and Helical Structure Parameters That Are Truly Comparable Between Structures, **237**, 125–156.

Nucleic acid structure parameters
The Effect of Mathematics and Coordinate System on Comparability and "Dependencies" of Nucleic Acid Structure Parameters, **237**, 98–124.

Nucleocapsid NCp7
Conformational Behaviour of the Active and Inactive Forms of the Nucleocapsid NCp7 of HIV-1 Studied by ^{1}H NMR, **235**, 287–301.

Nucleocapsid protein
Analytical Study of Rat Retrotransposon VL30 RNA Dimerization *in Vitro* and Packaging in Murine Leukemia Virus, **240**, 434–444.
Amino Acid Requirements of the Nucleocapsid Protein of HIV-1 for Increasing Catalytic Activity of a Ki-ras Ribozyme *in Vitro*, **242**, 422–429.

Nucleo-cytoplasmic partitioning
Control of Nucleo-cytoplasmic *HLA-DRA* mRNA Partitioning by Interaction of a Retention Signal with Compartmentalized Proteins, **240**, 193–204.

Nucleoprotein complex
Use of an Inducible Site-specific Recombinase to Probe the Structure of Protein–DNA Complexes Involved in F Plasmid Partition in *Escherichia coli*, **236**, 679–684.
Dynamics of the Nucleoprotein Structure of Simian Virus 40 Regulatory Region During Viral Development, **238**, 501–513.
Complex Formation between Phage ϕ29 Single-stranded DNA Binding Protein and DNA, **239**, 213–226.

Nucleoside analog inhibitor
Locations of Anti-AIDS Drug Binding Sites and Resistance Mutations in the Three-dimensional Structure of HIV-1 Reverse Transcriptase. Implications for Mechanisms of Drug Inhibition and Resistance, **243**, 369–387.

Nucleoside diphosphate kinase
Refined X-ray Structure of *Dictyostelium discoideum* Nucleoside Diphosphate Kinase at 1·8 Å Resolution, **243**, 873–890.

Nucleosome
DNA Sequence Organization in Chromatosomes, **235**, 855–870.
The Octameric Histone Core of the Nucleosome. Structural Issues Resolved, **236**, 179–188.
Nucleosome Structural Changes Due to Acetylation, **236**, 685–690.
Nucleosome Positioning on Chicken and Human Globin Gene Promoters *in Vitro*. Novel Mapping Techniques, **237**, 401–414.
Computer Simulation of Protein-induced Structural Changes in Closed Circular DNA, **242**, 271–290.
Evidence Indicating Proximity in the Nucleosome Between the Histone H4 N Termini and the Globular Domain of Histone H1, **243**, 48–59.

Nucleotide analog
Studies on Primer Binding of HIV-1 Reverse Transcriptase Using a Fluorescent Probe, **236**, 469–479.

Nucleotide sequence
Nucleotide Sequence and X-ray Structure of Cyclodextrin Glycosyltransferase from *Bacillus circulans* Strain 251 in a Maltose-dependent Crystal Form, **236**, 590–600.
Nucleotide Sequence of the *Escherichia coli* K12 Histidine Operon Revisited, **239**, 433–435.

Nucleotide synthesis
Crystallization and Preliminary X-ray Diffraction Studies on the Apo Form of Orotate Phosphoribosyltransferase from *Escherichia coli*, **241**, 292–294.

NusB
Bacteriophage Lambda N-Dependent Transcription Antitermination. Competition for an RNA Site May Regulate Antitermination, **236**, 217–228.

NusG
A Quaternary Transcription Termination Complex. Reciprocal Stabilization by Rho Factor and NusG Protein, **243**, 830–839.

Ocean pout
Single Crystals of a Type III Antifreeze Polypeptide from Ocean Pout, **237**, 351–352.

Octacalcium phosphate
A Unique Protonated Phosphate Group in Bone Mineral Not Present in Synthetic Calcium Phosphates. Identification by Phosphorous-31 Solid State NMR Spectroscopy, **244**, 423–435.

Oestrogen, *see* Estrogen

Okazaki fragment
The Solution Structure of the r(gcg)d(TA-TACCC):d(GGGTATACGC) Okazaki Fragment Contains Two Distinct Duplex Morphologies Connected by a Junction, **241**, 440–455.

Oligonucleotides
Sequence Dependence of DNA Structure in Solution, **235**, 325–330.
DNase I Footprinting of *cis*-or *trans*-Diamminedichloroplatinum(II)-modified DNA, **236**, 969–974.
Recombination-like Structure of d(CCGCGG), **243**, 484–493.

Oligopeptide transport
Three Highly Homologous Membrane-bound Lipoproteins Participate in Oligopeptide Transport by the Ami System of the Gram-positive *Streptococcus pneumoniae*, **241**, 44–58.

Oligopyrimidine
Starting Window, a Distinct Element in the Cap-independent Internal Initiation of Translation on Picornaviral RNA, **241**, 398–414.

Oligosaccharide binding
Crystal Structure of the Mutant D52S Hen Egg White Lysozyme with an Oligosaccharide Product, **243**, 856–872.

OmpR
Gene Activation by the *Escherichia coli* Positive Regulator, OmpR. Phosphorylation-independent Mechanism of Activation by an OmpR Mutant, **242**, 607–613.

OMTKY3
Solution Structure of Turkey Ovomucoid Third Domain as Determined from Nuclear Magnetic Resonance Data, **242**, 203–214.
Solution Structure of Reactive-site Hydrolyzed Turkey Ovomucoid Third Domain by Nuclear Magnetic Resonance and Distance Geometry Methods, **242**, 215–230.

Oncogene
Segregation Properties of Bovine Papillomaviral Plasmid DNA, **236**, 480–490.

Onconase
Refined 1·7 Å X-ray Crystallographic Structure of P-30 Protein, an Amphibian Ribonuclease with Anti-tumor Activity, **236**, 1141–1153.

One-dimensional diffusion
Kinetic Theory of ATP-driven Translocases on One-dimensional Polymer Lattices, **235**, 1436–1446.

Opal suppressor
Connecting Anticodon Recognition with the Active Site of *Escherichia coli* Glutaminyl-tRNA Synthetase, **240**, 111–118.

Open complex
A Promoter Melting Region in the Primary σ Factor of *Bacillus subtilis*. Identification of Functionally Important Aromatic Amino Acids, **235**, 1470–1488.
Direct and Indirect Effects of Mutations in λ P_{RM} on Open Complex Formation at the Divergent P_R Promoter, **240**, 119–126.

Open reading frame
A Voltage-gated Chloride Channel in the Yeast *Saccharomyces cerevisiae*, **242**, 595–598.

OPRTase
Crystallization and Preliminary X-ray Diffraction Studies on the Apo Form of Orotate Phosphoribosyltransferase from *Escherichia coli*, **241**, 292–294.

Optimal rigid body superposition
Significance of Root-Mean-Square Deviation in Comparing Three-dimensional Structures of Globular Proteins, **235**, 625–634.

Optimization
Kinetics of Protein Folding. A Lattice Model Study of the Requirements for Folding to the Native State, **235**, 1614–1636.
Prediction of the Positioning of the Seven Transmembrane α-helices of Bacteriorhodopsin. A Molecular Simulation Study, **236**, 1105–1122.

Order-disorder transitions
Backbone Dynamics of a Highly Disordered 131 Residue Fragment of Staphylococcal Nuclease, **242**, 527–546.

Organelles
On the Identification of Group II Introns in Nucleotide Sequence Data, **242**, 389–396.

Organophosphate inhibition
Pressure and Propylene Carbonate Denaturation of Native and "Aged" Phosphorylated Cholinesterase, **238**, 466–478.

oriC
DNA Damage-inducible Replication of the *Escherichia coli* Chromosome is Initiated at Separable Sites within the Minimal *oriC*, **235**, 1459–1469.

Ornithine aminotransferase
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Human Ornithine Aminotransferase, **243**, 128–130.

Osmoregulation
Crystallization and X-ray Studies of the DNA-binding Domain of OmpR Protein, a Positive Regulator Involved in Activation of Osmoregularity Genes in *Escherichia coli*, **235**, 780–782.
OmpR Mutants Specifically Defective for Transcriptional Activation, **243**, 579–594.

Osteogenesis imperfecta
Delayed Triple Helix Formation of Mutant Collagen from Patients with Osteogenesis Imperfecta, **236**, 940–949.

Osteogenic protein-1 (hOP-1)
Crystallization and Preliminary Crystallographic Data of Recombinant Human Osteogenic Protein-1 (hOP-1), **244**, 657–658.

Osteonectin
Changes in Calcium and Collagen IV Binding Caused by Mutations in the EF Hand and Other Domains of Extracellular Matrix Protein BM40 (SPARC, Osteonectin), **238**, 563–574.

Outer membrane
Crystallization and Preliminary X-ray Investigation of a Recombinant Outer Membrane Protein from *Neisseria meningitis*, **235**, 1154–1155.
Determinants of Receptor Specificity of Coliphages of the T4 Family. A Chaperone Alters the Host Range, **241**, 524–533.

Oxidation-reduction
Mutation of Tyrosine-67 to Phenylalanine in Cytochrome *c* Significantly Alters the Local Heme Environment, **235**, 1326–1341.
The Role of a Conserved Internal Water Molecule and Its Associated Hydrogen Bond Network in Cytochrome *c*, **236**, 786–799.

Oxygen affinity
Adaptation to Extreme Environments: Structure–Function Relationships in Emperor Penguin Haemoglobin, **237**, 615–621.

Oxygen binding
Synergistic Modulation by Chloride and Organic Phosphates of Hemoglobin from Bear (*Ursus arctos*), **236**, 1401–1406.

Oxygen carrier
Structure of the Sulfide-reactive Hemoglobin from the Clam *Lucina pectinata*. Crystallographic Analysis at 1·5 Å Resolution, **244**, 86–99.

Oxygen radical
Oxygen Radical Induced Mutagenesis is DNA Polymerase Specific, **235**, 33–41.

Oxygen transport
Structure Determination of Aquomet Porcine Hemoglobin at 2·8 Å Resolution, **244**, 541–553.

Oxygenases
Preliminary Crystallographic Analysis of Methane Mono-oxygenase Hydroxylase from *Methylosinus trichosporium* OB3b, **236**, 379–381.

OZF gene
The OZF Gene Encodes a Protein Consisting Essentially of Zinc Finger Motifs, **236**, 399–404.

p*K*
Electrostatic Properties of Two Porin Channels from *Escherichia coli*, **240**, 372–384.

pKa
Prediction of pH-dependent Properties of Proteins, **238**, 415–436.

***P22 c2* repressor**
Determination of the Nuclear Magnetic Resonance Structure of the DNA-binding Domain of the *P22 c2* Repressor (1 to 76) in Solution and Comparison with the DNA-binding Domain of the *434* Repressor, **235**, 1003–1020.

p53
The Characterization of p53 Binding Phage Isolated from Phage Peptide Display Libraries, **243**, 639–652.

***Pa*case**
Purification and DNA-Binding Activity of the PacA Subunit of the Bacteriophage P1 Pacase Enzyme, **243**, 258–267.

PA28 proteasome activator
PA28 Activator Protein Forms Regulatory Caps on Proteasome Stacked Rings, **236**, 7–15.

***pac*ase**
Faithful Cleavage of the P1 Packaging Site (*pac*) Requires Two Phage Proteins, PacA and PacB, and Two *Escherichia coli* Proteins, IHF and HU, **243**, 268–282.

Pac proteins
Purification and DNA-Binding Activity of the PacA Subunit of the Bacteriophage P1 Pacase Enzyme, **243**, 258–267.
Faithful Cleavage of the P1 Packaging Site (*pac*) Requires Two Phage Proteins, PacA and PacB, and Two *Escherichia coli* Proteins, IHF and HU, **243**, 268–282.

Paecilomyces varioti
Crystallization and Preliminary X-ray Crystallographic Studies of Thermostable Xylanase Crystals Isolated from *Paecilomyces varioti*, **243**, 806–808.

Pancreatic lipase
Horse Pancreatic Lipase. The Crystal Structure Refined at 2·3 Å Resolution, **238**, 709–732.

Panicum mosaic virus
Characterization of Crystals of Satellite Panicum Mosaic Virus, **238**, 849–851.

par
Host-inhibitory Functions Encoded by Promiscuous Plasmids. Transient Arrest of *Escherichia coli* Segregants that Fail to Inherit Plasmid RK2, **237**, 52–64.

parA
Partitioning of Plasmid R1. Ten Direct Repeats Flanking the *parA* Promoter Constitute a Centromere-like Partition Site *parC*, that Expresses Incompatibility, **236**, 1289–1298.
Partitioning of Plasmid R1. The *parA* Operon is Autoregulated by ParR and Its Transcription is Highly Stimulated by a Downstream Activating Element, **236**, 1299–1309.

Paracrystalline surface array
Mutagenesis of the Paracrystalline Surface Protein Array of *Aeromonas salmonicida* by Endogenous Insertion Elements, **237**, 452–463.

Parallel beta-barrel
Alignment of Beta-barrels in $(\beta/\alpha)_8$ Proteins using Hydrogen-bonding Pattern, **244**, 168–182.

Parallel-stranded DNA duplex
Solution Structure of the d(T-C-G-A) Duplex at Acidic pH. A Parallel-Stranded Helix Containing $C^+ \cdot C$, $G \cdot G$ and $A \cdot A$ Pairs, **242**, 508–526.

Paranemic
Unwound Regions in Yeast Centromere IV DNA, **243**, 179–189.

parS
Topological Scanning of the P1 Plasmid Partition Site, **243**, 190–198.

Partition site
Partitioning of Plasmid R1. Ten Direct Repeats Flanking the *parA* Promoter Constitute a Centromere-like Partition Site *parC*, that Expresses Incompatibility, **236**, 1289–1298.
Topological Scanning of the P1 Plasmid Partition Site, **243**, 190–198.

Partitioning
Segregation Properties of Bovine Papillomaviral Plasmid DNA, **236**, 480–490.
Partitioning of Plasmid R1. Ten Direct Repeats Flanking the *parA* Promoter Constitute a Centromere-like Partition Site *parC*, that Expresses Incompatibility, **236**, 1289–1298.
Partitioning of Plasmid R1. The *parA* Operon is Autoregulated by ParR and Its Transcription is Highly Stimulated by a Downstream Activating Element, **236**, 1299–1309.

Parvalbumin
Refined Crystal Structure of Rat Parvalbumin, a Mammalian α-lineage Parvalbumin, at 2·0 Å Resolution, **235**, 718–732.

Pattern recognition
Detecting Patterns in Protein Sequences, **239**, 698–712.
Alignment of Beta-barrels in $(\beta/\alpha)_8$ Proteins using Hydrogen-bonding Pattern, **244**, 168–182.

PEC-60
Solution Structure and Dynamics of PEC-60, a Protein of the Kazal Type Inhibitor Family, Determined by Nuclear Magnetic Resonance Spectroscopy, **239**, 137–153.

Pectinolytic bacteria
Specific Interactions of *Erwinia chrysanthemi* KdgR Repressor with Different Operators of Genes Involved in Pectinolysis, **236**, 427–440.

Penguin
Adaptation to Extreme Environments: Structure–Function Relationships in Emperor Penguin Haemoglobin, **237**, 615–621.

Penicillin
Crystallization and Preliminary X-ray Diffraction Studies on a Recombinant Isopenicillin N Synthase from *Cephalosporium acremonium*, **242**, 712–714.

Penicillin-binding protein
The *Bacillus subtilis spoVD* Gene Encodes a Mother-cell-specific Penicillin-binding Protein Required for Spore Morphogenesis, **235**, 209–220.
Crystallization and X-ray Diffraction Study of the *Streptomyces* K15 Penicillin-binding DD-Transpeptidase, **241**, 295–297.

Penicillopepsin
Protein Hydration Observed by X-ray Diffraction. Solvation Properties of Penicillopepsin and Neuraminidase Crystal Structures, **243**, 100–115.

Pentraxin
Crystallization and Preliminary X-ray Analysis of C-reactive Protein from Rat, **235**, 767–771.

PepC
Crystallization and Preliminary X-ray Analysis of PepC, a Thiol Aminopeptidase from *Lactococcus lactis* Homologous to Bleomycin Hydrolase, **237**, 160–162.

Peptide
Structural Specificity of Peptides in *Z*-DNA Formation and Energetics of the Peptide-induced *B–Z* Transition of Poly(dG-m^5dC), **236**, 610–617.

Peptide-N^4-(*N*-acetyl-β-D-glucosaminyl)asparagine amidase
Crystallization and Preliminary Crystallographic Analysis of Peptide-N^4-(*N*-acetyl-β-D-glucosaminyl)asparagine Amidase PNGase F, **241**, 622–623.

Peptide antagonists
Isolation of a Peptide Antagonist to the Thrombin Receptor using Phage Display, **244**, 361–369.

Peptide antibiotics
Peptide Antibiotics of the Tuberactinomycin Family as Inhibitors of Group I Intron RNA Splicing, **236**, 1001–1010.

Peptide binding
Generation of a Non-prolyl *cis* Peptide Bond in Ribonuclease T_1, **240**, 288–293.
Thermodynamic Partitioning Model for Hydrophobic Binding of Polypeptides by GroEL. I. GroEL Recognizes the Signal Sequences of β-lactamase Precursor, **242**, 150–164.
Isolation and Characterization of an *Escherichia coli* DnaK Mutant with Impaired ATPase Activity, **242**, 364–377.

Peptide complex
Five Viral Peptide–HLA-A2 Co-crystals. Simultaneous Space Group Determination and X-ray Data Collection, **239**, 581–587.

Peptide conformation
Backbone Flexibility and Stability of Reverse Turn Conformation in a Model System, **235**, 682–694.
Stabilization of a Type VI Turn in a Family of Linear Peptides in Water Solution, **243**, 736–753.
Three-dimensional Structure of a Type VI Turn in a Linear Peptide in Water Solution. Evidence for Stacking of Aromatic Rings as a Major Stabilizing Factor, **243**, 754–766.

Peptide display
Specificity of DnaK–peptide Binding, **235**, 848–854.
The Characterization of p53 Binding Phage Isolated from Phage Peptide Display Libraries, **243**, 639–652.

Peptide dynamics
Polypeptide Conformational Space. Dynamics by Solution NMR Disorder by X-ray Crystallography, **241**, 431–439.

Peptide epitopes
Structural Mimicry and Enhanced Immunogenicity of Peptide Epitopes Displayed on Filamentous Bacteriophage. The V3 Loop of HIV-1 gp120, **243**, 167–172.

Peptide fusion phage
Isolation of a Peptide Antagonist to the Thrombin Receptor using Phage Display, **244**, 361–369.

Peptide structure
Polypeptide Conformational Space. Dynamics by Solution NMR Disorder by X-ray Crystallography, **241**, 431–439.
Structure and Orientation of the Pore-forming Peptide, Melittin, in Lipid Bilayers, **241**, 456–466.
Helix-stabilizing Interaction Between Tyrosine and Leucine or Valine when the Spacing is $i,i+4$, **241**, 706–713.

Peptide synthetase
Bacterial Expression of Catalytically Active Fragments of the Multifunctional Enzyme Enniatin Synthetase, **243**, 116–122.

Periplasmic binding protein
Crystals of Glutamine-binding Protein in Various Conformational States, **240**, 87–91.

Permanganate
Stalling of *Escherichia coli* RNA Polymerase in the +6 to +12 Region *in Vivo* is Associated with Tight Binding to Consensus Promoter Elements, **239**, 455–465.

Permease
Crystallization of Enzyme IIB of the Cellobiose-specific Phosphotransferase System of *Escherichia coli*, **239**, 588–590.

Peroxidase
Crystal Structure of the Fungal Peroxidase from *Arthromyces ramosus* at 1·9 Å Resolution. Structural Comparisons with the Lignin and Cytochrome *c* Peroxidases, **235**, 331–344.
Preliminary Crystallographic Analysis of Manganese Peroxidase from *Phanerochaete chrysosporium*, **238**, 845–848.

Pertactin
Crystallographic Characterization of Pertactin, a Membrane-associated Protein from *Bordetella pertussis*, **235**, 772–773.

Pertussis, *see* Bordetella pertussis

PET122
OXA1, a *Saccharomyces cerevisiae* Nuclear Gene whose Sequence is Conserved from Prokaryotes to Eukaryotes Controls Cytochrome Oxidase Biogenesis, **239**, 201–212.

P-glycoprotein
Transmembrane Aromatic Amino Acid Distribution in P-glycoprotein. A Functional Role in Broad Substrate Specificity, **235**, 554–564.
Preliminary Crystallographic Analysis of a Fab Specific for P-glycoprotein With and Without Bound Peptide, **241**, 736–738.

Phage, *see* Bacteriophage

Pharmacophore mapping
The Use of Composite Crystal-field Environments in Molecular Recognition and the *de Novo* Design of Protein Ligands, **237**, 212–235.

Phase transition
Sequence Alignment and Penalty Choice. Review of Concepts, Case Studies and Implications, **235**, 1–12.
Residual Structure in a Staphylococcal Nuclease Fragment. Is It a Molten Globule and is Its Unfolding a First-order Phase Transition?, **243**, 93–99.

Phaseolin
Structure of Phaseolin at 2·2 Å Resolution. Implications for a Common Vicilin/Legumin Structure and the Genetic Engineering of Seed Storage Proteins, **238**, 748–776.

Phenol hydroxylase
Crystallization and Preliminary X-ray Analysis of Phenol Hydroxylase from *Trichosporon cutaneum*, **238**, 128–130.

Phosphagen kinase
Evolution of Phosphagen Kinase. Primary Structure of Glycocyamine Kinase and Arginine Kinase from Invertebrates, **237**, 353–357.

Phosphatase
Computer Analysis of Bacterial Haloacid Dehalogenases Defines a Large Superfamily of Hydrolases with Diverse Specificity. Application of an Iterative Approach to Database Search, **244**, 125–132.
Transmembrane Signaling. Mutational Analysis of the Cytoplasmic Linker Region of Taz1-1, a Tar-EnvZ Chimeric Receptor in *Escherichia coli*, **244**, 477–481.

Phosphate transfer enzymes
Refined X-ray Structure of *Dictyostelium discoideum* Nucleoside Diphosphate Kinase at 1·8 Å Resolution, **243**, 873–890.

Phosphate-binding
A Structural Analysis of Phosphate and Sulphate Binding Sites in Proteins. Estimation of Propensities for Binding and Conservation of Phosphate Binding Sites, **242**, 321–329.

Phosphate-ethylation mapping
Molecular Recognition of the Identity-determinant Set of Isoleucine Transfer RNA from *Escherichia coli*, **236**, 710–724.

Phosphatidylserine
Formation of Two-dimensional Arrays of Annexin V on Phosphatidylserine-containing Liposomes, **236**, 199–208.

Phosphofructokinase
The Role of Glu187 in the Regulation of Phosphofructokinase by Phosphoenolpyruvate, **235**, 68–72.

Phospholipase A_2
The Activity of Porcine Pancreatic Phospholipase A_2 in 20% Alcohol/Aqueous Solvent, by Experiment and Electrostatics Calculations, **236**, 904–917.

Phospholipid
X-ray Structure at 1·55 Å of Toxin γ, a Cardiotoxin from *Naja nigricollis* Venom. Crystal Packing Reveals a Model for Insertion into Membranes, **239**, 122–136.
Crystallization and Preliminary Crystallographic Data for Rab Guanine Nucleotide Dissociation Inhibitor (RabGDI) from Bovine Brain, **244**, 469–473.

Phosphomannose isomerase
Crystallization and Preliminary X-ray Analysis of *Candida albicans* Phosphomannose Isomerase, **237**, 349–350.

Phosphorothioate
Studies of the Interactions Between *Escherichia coli* Ribonuclease HI and Its Substrate, **243**, 782–791.

Phosphoryl transfer
The Structure of Uridylate Kinase with its Substrates, Showing the Transition State Geometry, **236**, 361–367.

Phosphorylase kinase
An Epitope Proximal to the Carboxyl Terminus of the α-Subunit is Located near the Lobe Tips of the Phosphorylase Kinase Hexadecamer, **235**, 974–982.
Structure of Phosphorylase Kinase. A Three-dimensional Model Derived from Stained and Unstained Electron Micrographs, **241**, 94–102.

Phosphorylation
See also Protein phosphorylation.
The Major Dimerization Determinants of the Nitrogen Regulatory Protein NTRC from Enteric Bacteria Lie in Its Carboxy-terminal Domain, **241**, 233–245.
The Modular Architecture of Bacterial Response Regulators. Insights into the Activation Mechanism of the BvgA Transactivator of *Bordetella pertussis*, **241**, 363–377.
Gene Activation by the *Escherichia coli* Positive Regulator, OmpR. Phosphorylation-independent Mechanism of Activation by an OmpR Mutant, **242**, 607–613.
Phosphorylation of the C-terminal Domain of Yeast Topoisomerase II by Casein Kinase II Affects DNA-Protein Interaction, **243**, 10–24.
Cloning and mRNA Expression of Human Unconventional Myosin-IC. A Homologue of Amoeboid Myosins-I With a Single IQ Motif and an SH3 Domain, **243**, 356–363.

Phosphotransfer
The 1·6 Å Structure of Histidine-containing Phosphotransfer Protein HPr from *Streptococcus faecalis*, **236**, 1341–1355.

Phosphotransferase
Crystallization of Enzyme IIB of the Cellobiose-specific Phosphotransferase System of *Escherichia coli*, **239**, 588–590.

Phosphotransferase system
The High-resolution Structure of the Histidine-containing Phosphocarrier Protein HPr from *Escherichia coli* Determined by Restrained Molecular Dynamics from Nuclear Magnetic Resonance Overhauser Effect Data, **237**, 544–559.

Phosphotyrosyl protein phosphatase
Crystallization and Preliminary X-ray Analysis of the Low Molecular Weight Phosphotyrosyl Protein Phosphatase from Bovine Heart, **238**, 281–283.

Phosvitins
Analysis of Mosquito Vitellogenin cDNA. Similarity with Vertebrate Phosvitins and Arthropod Serum Proteins, **237**, 641–647.

Photoaffinity labeling
Location of the Streptomycin Ribosomal Binding Site Explains its Pleiotropic Effects on Protein Biosynthesis, **235**, 1251–1260.

Photochemical release of substrates
On the Photochemical Release of Phosphate from 3,5-Dinitrophenyl Phosphate in a Protein Crystal, **236**, 995–1000.

(6–4) Photoproduct
Accuracy of Replication Past the T-C (6-4) Adduct, **235**, 465–471.

Photoreactivation
Unusual Kinetics of Uracil Formation in Single and Double-stranded DNA by Deamination of Cytosine in Cyclobutane Pyrimidine Dimers, **235**, 807–812.

Photosynthesis
Directed Mutational Analysis of Bacteriochlorophyll *a* Biosynthesis in *Rhodobacter capsulatus*, **237**, 622–640.
Thermodynamics of Membrane Polypeptide Oligomerization in Light-harvesting Complexes and Associated Structural Changes, **238**, 445–454.

Phylogeny
Molecular Phylogeny of the Alphaherpesvirinae Subfamily and a Proposed Evolutionary Timescale, **238**, 9–22.
The Molecular Cloning and Characterization of *Drosophila melanogaster* Myosin-IA and Myosin-IB, **239**, 347–356.
Bases Defining an Ammonium and Magnesium Ion-Dependent Tertiary Structure Within the Large Subunit Ribosomal RNA, **244**, 572–585.

Phytopathogen
Specific Interactions of *Erwinia chrysanthemi* KdgR Repressor with Different Operators of Genes Involved in Pectinolysis, **236**, 427–440.

Picornaviral
Starting Window, a Distinct Element in the Cap-independent Internal Initiation of Translation on Picornaviral RNA, **241**, 398–414.

Picosecond timescale
Ultrafast Measurements of Geminate Recombination of NO with Site-specific Mutants of Human Myoglobin, **238**, 437–444.

P_{II} protein
Preliminary X-ray Diffraction Analysis of Crystals of the P_{II} Protein from *Escherichia coli*, **243**, 796–798.

Planar acyl-ester
A Crystallographic Re-investigation into the Structure of *Streptomyces griseus* Proteinase A Reveals an Acyl-enzyme Intermediate, **241**, 574–587.

Plant viruses
Three-dimensional Structure of Calicivirus, **240**, 256–264.

Plants
Interstitial Telomeric Repeats within the *Arabidopsis thaliana* Genome, **239**, 163–169.
Structure-function Relationship Between Tobacco Mosaic Virus Coat Protein and Hypersensitivity in *Nicotiana sylvestris*, **242**, 130–138.
Crystallization and Preliminary Crystallographic Data for Acetohydroxy Acid Isomeroreductase from *Spinacia oleracea*, **242**, 578–581.

Plasma membrane transport
A Creatine Transporter cDNA from *Torpedo* Illustrates Structure/Function Relationships in the GABA/Noradrenaline Transporter Family, **241**, 317–324.

Plasmid
See also Individual plasmids; Promiscuous plasmids.
The Loop Sequence Plays Crucial Roles for Isomerization of Intramolecular DNA Triplexes in Supercoiled Plasmids, **235**, 185–197.
Use of an Inducible Site-specific Recombinase to Probe the Structure of Protein–DNA Complexes Involved in F Plasmid Partition in *Escherichia coli*, **236**, 679–684.
Host-inhibitory Functions Encoded by Promiscuous Plasmids. Transient Arrest of *Escherichia coli* Segregants that Fail to Inherit Plasmid RK2, **237**, 52–64.
A Novel Site-specific Recombinase Encoded by the *Streptococcus pyogenes* Plasmid pSM19035, **238**, 159–172.
Complete Nucleotide Sequence of Birmingham IncPα Plasmids. Compilation and Comparative Analysis, **239**, 623–663.

Topological Scanning of the P1 Plasmid Partition Site, **243**, 190–198.

Plasmid pLS1
Correlation between DNA Bending and Transcriptional Activation at a Plasmid Promoter, **241**, 7–17.

Plasmid R1
Partitioning of Plasmid R1. Ten Direct Repeats Flanking the *parA* Promoter Constitute a Centromere-like Partition Site *parC*, that Expresses Incompatibility, **236**, 1289–1298.

Plasmid R64
DNA Rearrangement of the Shufflon Determines Recipient Specificity in Liquid Mating of IncI1 Plasmid R64, **243**, 6–9.

Plasmid recombination
recA-independent and *recA*-dependent Intramolecular Plasmid Recombination. Differential Homology Requirement and Distance Effect, **235**, 414–423.

Plasmid RK2
The *parDE* Operon of the Broad-host-range Plasmid RK2 Specifies Growth Inhibition Associated with Plasmid Loss, **237**, 35–51.
Host-inhibitory Functions Encoded by Promiscuous Plasmids. Transient Arrest of *Escherichia coli* Segregants that Fail to Inherit Plasmid RK2, **237**, 52–64.

Plasmid stability
Segregation Properties of Bovine Papillomaviral Plasmid DNA, **236**, 480–490.
Partitioning of Plasmid R1. The *parA* Operon is Autoregulated by ParR and Its Transcription is Highly Stimulated by a Downstream Activating Element, **236**, 1299–1309.
The *parDE* Operon of the Broad-host-range Plasmid RK2 Specifies Growth Inhibition Associated with Plasmid Loss, **237**, 35–51.

Plasminogen
Interactions of Plasminogen with Polymerizing Fibrin and its Derivatives, Monitored with a Photoaffinity Cross-linker and Electron Microscopy, **235**, 1117–1135.

Plasminogen activator
Interactions of Plasminogen with Polymerizing Fibrin and its Derivatives, Monitored with a Photoaffinity Cross-linker and Electron Microscopy, **235**, 1117–1135.
Solution Structure of the Kringle Domain from Urokinase-type Plasminogen Activator, **235**, 1548–1559.
Erythrina caffra Trypsin Inhibitor Retains Its Native Structure and Function After Reducing Its Disulfide Bonds, **239**, 276–284.

Plasmodium
Characterization of a *Plasmodium vivax* Cysteine Proteinase Gene Identifies Uniquely Conserved Amino Acids that May Mediate the Substrate Specificity of Malarial Hemoglobinases, **241**, 312–316.

Plastocyanin
Solution Structure of the Type 1 Blue Copper Protein Amicyanin from *Thiobacillus versutus*, **240**, 358–371.

Plastocyanin-azurin family
Volume Changes in Protein Evolution, **236**, 1067–1078.

Platinum(II) complexes
DNase I Footprinting of *cis*-or *trans*-Diamminedichloroplatinum(II)-modified DNA, **236**, 969–974.

P-loop motif
Functional Characterization of Residues in the P-loop Motif of the RecA Protein ATP Binding Site, **237**, 20–34.

PNGase F
Crystallization and Preliminary Crystallographic Analysis of Peptide-N^4-(*N*-acetyl-β-D-glucosaminyl)asparagine Amidase PNGase F, **241**, 622–623.
Purification and Crystallization of the Endoglycosidase PNGase F, a Peptide:*N*-glycosidase from *Flavobacterium meningosepticum*, **241**, 624–626.

Point mutation
Wide Variations in Neighbor-dependent Substitution Rates, **236**, 1022–1033.
Sequence Statistics Reliably Predict Stabilizing Mutations in a Protein Domain, **240**, 188–192.

pol II
Crystallization of DNA Polymerase II from *Escherichia coli*, **238**, 120–122.

***polA1* and *mutD5* mutators**
Nucleotide Sequence of the *Escherichia coli* K12 Histidine Operon Revisited, **239**, 433–435.

Polarity reversal in collagen
Vertebrate (Chick) Collagen Fibrils Formed *in Vivo* Can Exhibit a Reversal in Molecular Polarity, **235**, 80–83.

Poliovirus
Genetic Studies on the Poliovirus 2C Protein, an NTPase, **236**, 1310–1323.

Poly(ADP-ribose) polymerase
Conformational Analysis of a 139 Base-pair DNA Fragment Containing a Single-stranded Break and Its Interaction with Human Poly(ADP-ribose) Polymerase, **235**, 1062–1071.

Poly-alanine chains
Does Compactness Induce Secondary Structure in Proteins? A Study of Poly-alanine Chains Computed by Distance Geometry, **241**, 557–573.

Polyelectrolytes
Stabilization of RNA Structure by Mg Ions. Specific and Non-specific Effects, **237**, 577–587.
Excess Counterion Accumulation around Branched Nucleic Acids, **243**, 919–929.

Polyethylene glycol
Quantification of the Effect of Excluded Volume on Double-stranded DNA, **242**, 547–558.

Polymer water
Measurement of the Hemoglobin Concentration in Deoxhemoglobin S Polymers and Characterization of the Polymer Water Compartment, **244**, 100–109.

Polymerase
See also DNA polymerase; RNA polymerase.
Oxygen Radical Induced Mutagenesis is DNA Polymerase Specific, **235**, 33–41.
The Thumb's Knuckle. Flexibility in the Thumb Subdomain of T7 RNA Polymerase is Revealed by the Structure of a Chimeric T7/T3 RNA Polymerase, **244**, 6–12.

Polymerization
Measurement of the Hemoglobin Concentration in Deoxhemoglobin S Polymers and Characterization of the Polymer Water Compartment, **244**, 100–109.

Polymorphism
Polyhedral Assembly of a Membrane Protein in its Three-dimensional Crystal, **236**, 990–994.
Nucleotide Sequence of the *Escherichia coli* K12 Histidine Operon Revisited, **239**, 433–435.

Polynucleotide phosphorylase
Nucleolytic Inactivation and Degradation of the RNase III Processed *pnp* Message Encoding Polynucleotide Phosphorylase of *Escherichia coli*, **239**, 439–454.

Polypurine·polypyrimidine sequences
The Loop Sequence Plays Crucial Roles for Isomerization of Intramolecular DNA Triplexes in Supercoiled Plasmids, **235**, 185–197.

Polysaccharide antigens
Exploring the Mimicry of Polysaccharide Antigens by Anti-idiotypic Antibodies. The Crystallization, Molecular Replacement, and Refinement to 2·8 Å Resolution of an Idiotope–Anti-idiotope-Fab Complex and of the Unliganded-Anti-idiotope Fab, **241**, 691–705.

Polyserine domains
Analysis of Mosquito Vitellogenin cDNA. Similarity with Vertebrate Phosvitins and Arthropod Serum Proteins, **237**, 641–647.

Porin
Export and Trimerization Pathways of Maltoporin Overlap in the Inner Membrane of *Escherichia coli*, **238**, 555–562.
Refined Structure of the Porin from *Rhodopseudomonas blastica*. Comparison with the Porin from *Rhodobacter capsulatus*, **243**, 891–905.

Porins
Electrostatic Properties of Two Porin Channels from *Escherichia coli*, **240**, 372–384.

Positive regulation
Which Nucleotides in the "−10" Region are Crucial to Obtain a Fully Active MalT-dependent Promoter?, **238**, 643–648.
Gene Activation by the *Escherichia coli* Positive Regulator, OmpR. Phosphorylation-independent Mechanism of Activation by an OmpR Mutant, **242**, 607–613.

Post-transcriptional control
Control of Nucleo-cytoplasmic *HLA-DRA* mRNA Partitioning by Interaction of a Retention Signal with Compartmentalized Proteins, **240**, 193 204.

Post-translational processing
Structural Dependence of Post-translational Modification and Reductive Acetylation of the Lipoyl Domain of the Pyruvate Dehydrogenase Multienzyme Complex, **236**, 209–216.
An Alternative Splicing Modifies the C-Terminal End of Tryptophanyl-tRNA Synthetase in Murine Embryonic Stem Cells, **242**, 599–603.

PPIase
The Molecular Replacement Solution and X-ray Refinement to 2·8 Å of a Decameric Complex of Human Cyclophilin A with the Immunosuppressive Drug Cyclosporin A, **244**, 385–409.

Precipitation
Thermal Stabilization of Thymidylate Synthase by Engineering Two Disulfide Bridges Across the Dimer Interface, **235**, 89–94.

Precision
An Assessment of the Precision and Accuracy of Protein Structures Determined by NMR. Dependence on Distance Errors, **239**, 601–607.

Precursor
20 S Proteasomes are Assembled *via* Distinct Precursor Complexes. Processing of LMP2 and LMP7 Proproteins Takes Place in 13–16 S Preproteasome Complexes, **236**, 975–981.

Prediction accuracy
Redefining the Goals of Protein Secondary Structure Prediction, **235**, 13–26.

Predivisional cell
A *Caulobacter* DNA Methyltransferase that Functions only in the Predivisional Cell, **235**, 472–485.

Preferential DNA repair
High Resolution Mapping of UV-induced Photoproducts in the *Escherichia coli lacI* Gene. Inefficient Repair of the Non-transcribed Strand Correlates with High Mutation Frequency, **238**, 319–332.

Preincision complex
Helicase Motifs V and VI of the *Escherichia coli* UvrB Protein of the UvrABC Endonuclease are Essential for the Formation of the Preincision Complex, **240**, 294 307.

Premature stop codons
Premature Stop Codons Inactivate the RT6 Genes of the Human and Chimpanzee Species, **243**, 537–546.

Premessenger RNA
Structural Study of the 5′ End of a Synthetic Premessenger RNA from Adenovirus. Evidence for a Long-range Exon-Intron Interaction, **240**, 205–225.

Pre-mRNA processing
Identification, Molecular Cloning, Expression and Chromosome Mapping of a Family of Transformation Upregulated hnRNP-K Proteins Derived by Alternative Splicing, **236**, 33–48.
Conserved Sequences in a Class of Rare Eukaryotic Nuclear Introns with Non-consensus Splice Sites, **239**, 357–365.

Pressure
Arc Repressor will not Denature Under Pressure in the Absence of Water, **240**, 184–187.

Pribnow box
Which Nucleotides in the "−10" Region are Crucial to Obtain a Fully Active MalT-dependent Promoter?, **238**, 643–648.

Primer binding site
Studies on Primer Binding of HIV-1 Reverse Transcriptase Using a Fluorescent Probe, **236**, 469–479.

Probing
Solution Structure of the 3′-End of Brome Mosaic Virus Genomic RNAs. Conformational Mimicry with Canonical tRNAs, **235**, 508–531.

Processive degradation
The Processive Reaction Mechanism of Ribonuclease II, **243**, 930–943.

Processivity
Crystallization of Proliferating Cell Nuclear Antigen (PCNA) from *Saccharomyces cerevisiae*, **241**, 265–268.
The Thumb's Knuckle. Flexibility in the Thumb Subdomain of T7 RNA Polymerase is Revealed by the Structure of a Chimeric T7/T3 RNA Polymerase, **244**, 6–12.

Product-inhibition
Enzyme–Substrate Interactions. Structure of Human Carbonic Anhydrase I Complexed with Bicarbonate, **241**, 226–232.

Pro-factor D
Preliminary Crystallographic Studies on Human Complement Pro-factor D, **235**, 1144–1146.

Profiles
Position-based Sequence Weights, **243**, 574–578.

Profilin
Purification, Characterization and Crystallization of *Acanthamoeba* Profilin Expressed in *Escherichia coli*, **236**, 950–952.
Crystallization and Structure Determination of Bovine Profilin at 2·0 Å Resolution, **240**, 459–475.
Purification, Characterization and Crystallization of Human Platelet Profilin Expressed in *Escherichia coli*, **241**, 480–482.

Proliferating cell nuclear antigen (PCNA)
Crystallization of Proliferating Cell Nuclear Antigen (PCNA) from *Saccharomyces cerevisiae*, **241**, 265–268.

Proline dehydrogenase
Sequence Analysis Identifies the Proline Dehydrogenase and Δ^1-Pyrroline-5-carboxylate Dehydrogenase Domains of the Multifunctional *Escherichia coli* PutA Protein, **243**, 950–956.

Prolyl isomerization
Intact Disulfide Bonds Decelerate the Folding of Ribonuclease T1, **239**, 713–725.
Generation of a Non-prolyl *cis* Peptide Bond in Ribonuclease T_1, **240**, 288–293.

Promiscuous plasmid
Host-inhibitory Functions Encoded by Promiscuous Plasmids. Transient Arrest of *Escherichia coli* Segregants that Fail to Inherit Plasmid RK2, **237**, 52–64.
Complete Nucleotide Sequence of Birmingham IncPα Plasmids. Compilation and Comparative Analysis, **239**, 623–663.

Promoter
Direct and Indirect Effects of Mutations in λP_{RM} on Open Complex Formation at the Divergent P_R Promoter, **240**, 119–126.

Promoters
The *Bacillus subtilis spoVD* Gene Encodes a Mother-cell-specific Penicillin-binding Protein Required for Spore Morphogenesis, **235**, 209–220.
An *Escherichia coli* RNA Polymerase Defective in Transcription due to its Overproduction of Abortive Initiation Products, **236**, 72–80.
ζ-Crystallin: A Lens-specific Promoter and the Gene Recruitment of an Enzyme as a Crystallin, **236**, 669–678.
Transcription Activation by the *Escherichia coli* Cyclic AMP Receptor Protein. Receptors Bound in Tandem at Promoters Can Interact Synergistically, **241**, 341–352.
The Promoter of the H1° Histone Gene contains a DNA Element bound by Retinoic Acid Receptors, **242**, 37–44.
Isolated P2 rRNA Promoters of *Escherichia coli* are Strong Promoters that are Subject to Stringent Control, **243**, 152–156.

Propeller fold
Drosophila kelch Motif is Derived from a Common Enzyme Fold, **236**, 1277–1282.

Propensity
Backbone Flexibility and Stability of Reverse Turn Conformation in a Model System, **235**, 682–694.
A Structural Analysis of Phosphate and Sulphate Binding Sites in Proteins. Estimation of Propensities for Binding and Conservation of Phosphate Binding Sites, **242**, 321–329.

Proprotein processing
20 S Proteasomes are Assembled *via* Distinct Precursor Complexes. Processing of LMP2 and LMP7 Proproteins Takes Place in 13–16 S Preproteasome Complexes, **236**, 975–981.

Protease
Characterization of a *Plasmodium vivax* Cysteine Proteinase Gene Identifies Uniquely Conserved Amino Acids that May Mediate the Substrate Specificity of Malarial Hemoglobinases, **241**, 312–316.

Protease inhibitor
The Corn Inhibitor of Blood Coagulation Factor XIIa. Crystallization and Preliminary Crystallographic Analysis, **236**, 385–387.

Proteasome
PA28 Activator Protein Forms Regulatory Caps on Proteasome Stacked Rings, **236**, 7–15.
20 S Proteasomes are Assembled *via* Distinct Precursor Complexes. Processing of LMP2 and LMP7 Proproteins Takes Place in 13–16 S Preproteasome Complexes, **236**, 975–981.
Isolation and Characterization of α-Type HC3 abd β-Type HC5 Subunit Genes of Human Proteasomes, **244**, 117–124.

Proteasome gene family
Isolation and Characterization of α-Type HC3 abd β-Type HC5 Subunit Genes of Human Proteasomes, **244**, 117–124.

Protein
Translational and Rotational Diffusion of Proteins, **236**, 629–636.
Discrimination of Intracellular and Extracellular Proteins Using Amino Acid Composition and Residue-pair Frequencies, **238**, 54–61.
Prediction of pH-dependent Properties of Proteins, **238**, 415–436.
Homology Modeling of Divergent Proteins, **241**, 143–149.
Structure Based Prediction of Protein Folding Intermediates, **242**, 62–80.
Solution Structure of Turkey Ovomucoid Third Domain as Determined from Nuclear Magnetic Resonance Data, **242**, 203–214.
Solution Structure of Reactive-site Hydrolyzed Turke Ovomucoid Third Domain by Nuclear Magneti Resonance and Distance Geometry Methods, **242** 215–230.
A Structural Analysis of Phosphate and Sulphate Bindin Sites in Proteins. Estimation of Propensities fo Binding and Conservation of Phosphate Binding Site **242**, 321–329.
Interaction Between Tumour Necrosis Factor α Ribozym and Cellular Proteins. Involvement in Ribozym Stability and Activity, **242**, 619–629.
Helicity, Circular Dichroism and Molecular Dynamics o Proteins, **243**, 173–178.

Protein association
Characterization of Multiple Oligometric Vimentin Intermediate Filament Units by Transient Electri Birefringence Measurements, **236**, 1241–1249.

Protein biosynthesis
tRNA Structure and Ribosomal Function. I. tRN Nucleotide 27-43 Mutations Enhance First Positio Wobble, **235**, 1381–1394.
tRNA Structure and Ribosomal Function. II. Interactio Between Anticodon Helix and other tRNA Mutations **235**, 1395–1405.
Export and Trimerization Pathways of Maltoporin Overlap in the Inner Membrane of *Escherichia coli* **238**, 555–562.
Conformation of the Central, Three-helix Junction of the 5 S Ribosomal RNA of *Sulfolobus acidocaldarius*, **241** 415–430.
The Molecular Chaperonin TF55 from the Thermophilic Archaeon *Sulfolobus solfataricus*. A Biochemical and Structural Characterization, **242**, 397–407.

Protein blocks
Position-based Sequence Weights, **243**, 574–578.

Protein (CAP)
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP) I Saturation and Alanine-scanning Mutagenesis, **243** 595–602.
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP). II. Role at Class I and Class II CAP-dependent Promoters, **243** 603–610.

Protein coding sequences
A Graphic Approach to Analyzing Codon Usage in 1562 *Escherichia coli* Protein Coding Sequences, **238**, 1–8.

Protein crystal structure
The Molecular Replacement Solution and X-ray Refinement to 2·8 Å of a Decameric Complex of Human Cyclophilin A with the Immunosuppressive Drug Cyclosporin A, **244**, 385–409.

Protein crystallization
Crystallization of Canine Cardiac Calsequestrin, **235**, 357–360.
Crystallization of Thioesterase II from *Escherichia coli*, **236**, 660–662.
Crystallization of the NADH-specific Enoyl Acyl Carrier Protein Reductase from *Brassica napus*, **237**, 240–242.
Crystallization and Preliminary Crystallographic Studies of Giα1 and Mutants of Giα1 in the GTP and GDP-bound States, **238**, 630–634.
Crystallization and Preliminary Crystallographic Data for an FMN-dependent Nitroreductase Enzyme from *Escherichia coli* B, **238**, 852–853.
Five Viral Peptide–HLA-A2 Co-crystals. Simultaneous Space Group Determination and X-ray Data Collection, **239**, 581–587.
Purification, Crystallization and Preliminary X-ray Analysis of Murine Interleukin-5, **241**, 269–272.
Crystallisation of the Glycyl-tRNA Synthetase from *Thermus thermophilus* and Initial Crystallographic Data, **241**, 732–735.
Crystallization of the Malonyl Coenzyme A–Acyl Carrier Protein Transacylase from *Escherichia coli*, **242**, 99–102.

Crystallization of a Hyperthermophilic Archaeal Elongation Factor 1α, **242**, 175–177.
Crystallization of GreA, a Transcript Cleavage Factor from *Escherichia coli*, **242**, 582–585.
Crystallization and Preliminary Crystallographic Characterization of Endo-polygalacturonase II from *Aspergillus niger*, **243**, 351–352.
Crystallization and Preliminary X-ray Diffraction Studies of the Lepidopteran-specific Insecticidal Crystal Protein CrylA(a), **243**, 530–532.
Structure Determination of Aquomet Porcine Hemoglobin at 2·8 Å Resolution, **244**, 541–553.
Crystallization and Preliminary Crystallographic Data of Recombinant Human Osteogenic Protein-1 (hOP-1), **244**, 657–658.

Protein crystallography
Crystal Structure of Apo-avidin from Hen Egg-white, **235**, 42–46.
Co-crystallization of the Catalytic Subunit of the Serine/Threonine Specific Protein Phosphatase 1 from Human in Complex with Microcystin LR, **235**, 763–766.
Crystallization and Preliminary Crystallographic Studies of *Saccharomyces cerevisiae* Alcohol Dehydrogenase I, **235**, 777–779.
Crystal Structure of *Escherichia coli* Thioredoxin Reductase Refined at 2 Å Resolution. Implications for a Large Conformational Change during Catalysis, **236**, 800–816.
Crystal Structure Analysis and Refinement at 2·15 Å Resolution of Amicyanin, a Type I Blue Copper Protein, from *Thiobacillus versutus*, **236**, 1196–1211.
Refined 2·0 Å X-ray Crystal Structure of the Snake Venom Zinc-endopeptidase Adamalysin II. Primary and Tertiary Structure Determination, Refinement, Molecular Structure and Comparison with Astacin, Collagenase and Thermolysin, **239**, 513–544.
Purification and Crystallization of the Catalytic Domain of Human Protein Tyrosine Phosphatase 1B Expressed in *Escherichia coli*, **239**, 726–730.
Crystallization and Preliminary Characterization of Crystals of D-2-hydroxyisocaproate Dehydrogenase from *Lactobacillus casei*, **240**, 400–402.
Exploring the Mimicry of Polysaccharide Antigens by Anti-idiotypic Antibodies. The Crystallization, Molecular Replacement, and Refinement to 2·8 Å Resolution of an Idiotope–Anti-idiotope-Fab Complex and of the Unliganded-Anti-idiotope Fab, **241**, 691–705.

Protein crystals
Crystallization and Preliminary X-ray Analysis of Human Plasma Apolipoprotein C-I, **236**, 382–384.

Protein data bases
Factors Influencing the Ability of Knowledge-based Potentials to Identify Native Sequence-Structure Matches, **235**, 1598–1613.

Protein denaturation
Pressure and Propylene Carbonate Denaturation of Native and "Aged" Phosphorylated Cholinesterase, **238**, 466–478.
Arc Repressor will not Denature Under Pressure in the Absence of Water, **240**, 184–187.

Protein design
High Level Expression and Rational Mutagenesis of a Designed Protein, the Minibody. From an Insoluble to a Soluble Molecule, **236**, 649–659.
The Role of Interhelical Ionic Interactions in Controlling Protein Folding and Stability. *De Novo* Designed Synthetic Two-stranded αHelical Coiled-Coils, **237**, 500–512.
The *de Novo* Design of an Antibody Combining Site. Crystallographic Analysis of the V_L Domain Confirms the Structural Model, **238**, 226–244.

Protein dynamics
Thermal Expansion of Hen Egg-white Lysozyme. Comparison of the 1·9 Å Resolution Structures of the Tetragonal Form of the Enzyme at 100 K and 298 K, **235**, 302–317.
Dynamical Structure of the Hinge Region of Immunoglobulin G as Studied by ^{13}C Nuclear Magnetic Resonance Spectroscopy, **236**, 300–309.
Solution Structure and Dynamics of PEC-60, a Protein of the Kazal Type Inhibitor Family, Determined by Nuclear Magnetic Resonance Spectroscopy, **239**, 137–153.
Unfolding Pathway of Apomyoglobin. Simultaneous Characterization of Acidic Conformational States by Frequency Domain Fluorometry, **241**, 103–109.
Liquid-like Side-chain Dynamics in Myoglobin, **242**, 181–185.
Proton NMR Studies of the Structural and Dynamical Effect of Chemical Modification of a Single Aromatic Side-chain in a Snake Cardiotoxin. Relation to the Structure of the Putative Binding Site and the Cytolytic Activity of the Toxin, **243**, 719–735.

Protein engineering
See also Enzyme engineering.
High Level Expression and Rational Mutagenesis of a Designed Protein, the Minibody. From an Insoluble to a Soluble Molecule, **236**, 649–659.
^1H-NMR Assignment and Solution Structure of Human Acidic Fibroblast Growth Factor Activated by Inositol Hexasulfate, **242**, 81–98.

Protein evolution
Accommodation of Amino Acid Insertions in an α-Helix of T4 Lysozyme. Structural and Thermodynamic Analysis, **236**, 869–886.
Structural Features can be Unconserved in Proteins with Similar Folds. An Analysis of Side-chain to Side-chain Contacts Secondary Structure and Accessibility, **244**, 332–350.

Protein export
pIV, a Filamentous Phage Protein that Mediates Phage Export Across the Bacterial Cell Envelope, Forms a Multimer, **238**, 187–198.

Protein flexibility
Accommodation of Amino Acid Insertions in an α-Helix of T4 Lysozyme. Structural and Thermodynamic Analysis, **236**, 869–886.
Pressure Effects on Protein Flexibility: Monomeric Proteins, **242**, 291–301.
The Thumb's Knuckle. Flexibility in the Thumb Subdomain of T7 RNA Polymerase is Revealed by the Structure of a Chimeric T7/T3 RNA Polymerase, **244**, 6–12.

Protein folding
See also Folding intermediate.
Evidence for Strained Interactions between Side-chains and the Polypeptide Backbone, **235**, 27–32.
Domain Interactions and Connecting Peptides in Lens Crystallins, **235**, 84–88.
Characterization of a Trifluoroethanol-induced Partially Folded State of α-Lactalbumin, **235**, 587–599.
Specificity of DnaK–peptide Binding, **235**, 848–854.
Biased Probability Monte Carlo Conformational Searches and Electrostatic Calculations for Peptides and Proteins, **235**, 983–1002.
^1H NMR Analysis of the Partly-folded Non-native Two-disulphide Intermediates (30-51,5-14) and (30-51,5-38) in the Folding Pathway of Bovine Pancreatic Trypsin Inhibitor, **235**, 1044–1061.
Kinetics of Protein Folding. A Lattice Model Study of the Requirements for Folding to the Native State, **235**, 1614–1636.
Formation of a Hydrophobic Cluster in Denatured Bovine Pancreatic Trypsin Inhibitor, **236**, 412–420.
Structural Characterization of the FK506 Binding Protein Unfolded in Urea and Guanidine Hydrochloride, **236**, 637–648.

Folding Intermediate Binds to the Bottom of Bullet-shaped Holo-chaperonin and is Readily Accessible to Antibody, **236**, 691–696.
Folding the Main Chain of Small Proteins with the Genetic Algorithm, **236**, 844–861.
Principles Determining the Structure of β-Sheet Barrels in Proteins. II The Observed Structures, **236**, 1382–1400.
Amide Hydrogen Exchange in a Highly Denatured State. Hen Egg-white Lysozyme in Urea, **237**, 247–254.
Comparison of the Conformational Stability of the Molten Globule and Native States of Horse Cytochrome *c*. Effects of Acetylation, Heat, Urea and Guanidine-Hydrochloride, **237**, 336–348.
The Role of Interhelical Ionic Interactions in Controlling Protein Folding and Stability. *De Novo* Designed Synthetic Two-stranded αHelical Coiled-Coils, **237**, 500–512.
The Role of Interhelical Ionic Interactions in Controlling Protein Folding and Stability. *De Novo* Designed Synthetic Two-stranded αHelical Coiled-Coils, **237**, 500–512.
Molecular Mechanisms of Acid Denaturation. The Role of Histidine Residues in the Partial Unfolding of Apomyoglobin, **237**, 588–601.
Structural Origins of pH and Ionic Strength Effects on Protein Stability. Acid Denaturation of Sperm Whale Apomyoglobin, **237**, 602–614.
Domain Structure of the Fib-1 and Fib-2 Regions of Human Fibronectin. Thermodynamic Properties of the Type I Finger Module, **238**, 833–844.
Measuring Residue Associations in Protein Structures. Possible Implications for Protein Folding, **239**, 227–248.
Intact Disulfide Bonds Decelerate the Folding of Ribonuclease T1, **239**, 713–725.
Generation of a Non-prolyl *cis* Peptide Bond in Ribonuclease T_1, **240**, 288–293.
Engineered Tyrosine Residues Serve as the Local Probes to Detect a Kinetic Intermediate in the Folding of Ribose-binding Protein, **240**, 385–395.
To Build a Virus Capsid. An Equilibrium Model of the Self Assembly of Polyhedral Protein Complexes, **241**, 59–67.
Homology Modeling of Divergent Proteins, **241**, 143–149.
The Origins of Protein Secondary Structure. Effects of Packing Density and Hydrogen Bonding Studied by a Fast Conformational Search, **241**, 214–225.
Does Compactness Induce Secondary Structure in Proteins? A Study of Poly-alanine Chains Computed by Distance Geometry, **241**, 557–573.
Thermodynamic Partitioning Model for Hydrophobic Binding of Polypeptides by GroEL. I. GroEL Recognizes the Signal Sequences of β-lactamase Precursor, **242**, 150–164.
Thermodynamic Partitioning Model for Hydrophobic Binding of Polypeptides by GroEL. II. GroEL Recognizes Thermally Unfolded Mature β-lactamase, **242**, 165–174.
The Immunoglobulin Fold. Structural Classification, Sequence Patterns and Common Core, **242**, 309–320.
The Molecular Chaperonin TF55 from the Thermophilic Archaeon *Sulfolobus solfataricus*. A Biochemical and Structural Characterization, **242**, 397–407.
Fibritin Encoded by Bacteriophage T4 Gene wac has a Parallel Triple-stranded α-Helical Coiled-coil Structure, **242**, 470–486.
Helix Stop and Start Signals in Peptides and Proteins. The Capping Box does not Necessarily Prevent Helix Elongation, **242**, 487–496.
Backbone Dynamics of a Highly Disordered 131 Residue Fragment of Staphylococcal Nuclease, **242**, 527–546.
Correctly Folded T-cell Receptor Fragments in the Periplasm of *Escherichia coli*. Influence of Folding Catalysts, **242**, 655–669.
The Role of Side-chain Hydrogen Bonds in the Formation and Stabilization of Secondary Structure in Soluble Proteins, **243**, 504–519.
Exploring Conformational Space with a Simple Latti Model for Protein Structure, **243**, 668–682.
Stabilization of a Type VI Turn in a Family of Line Peptides in Water Solution, **243**, 736–753.
Three-dimensional Structure of a Type VI Turn in Linear Peptide in Water Solution. Evidence f Stacking of Aromatic Rings as a Major Stabilizi Factor, **243**, 754–766.
Chaperone-dependent Folding and Activation Ribosome-bound Nascent Rhodanese. Analysis b Fluorescence, **244**, 319–331.
Analysis and Classification of Disulphide Connectivity Proteins. The Entropic Effect of Cross-linkage, **24** 448–463.

Protein G

The Third IgG-Binding Domain from Streptococc Protein G. An Analysis by X-ray Crystallography the Structure Alone and in a Complex with Fab, **24** 906–918.

Protein kinases

Characterization by cDNA Cloning of Two New Huma Protein Kinases. Evidence by Sequence Comparison a New Family of Mammalian Protein Kinases, **24** 665–672.

Protein loop mobility

Investigation of Shape Variations in the Antibod Binding Site by Molecular Dynamics Compute Simulation, **236**, 1186–1195.

Protein microsequencing

Non-phosphorylating GAPDH of Higher Plants is Member of the Aldehyde Dehydrogenase Superfamil with no Sequence Homology to Phosphorylatin GAPDH, **237**, 165–171.

Protein modeling

Hidden Markov Models in Computational Biology Applications to Protein Modeling, **235**, 1501–1531.

Protein modules

Drosophila kelch Motif is Derived from a Commo Enzyme Fold, **236**, 1277–1282.

Protein mutagenesis

Catalytic Antibody Model and Mutagenesis Implicat Arginine in Transition-state Stabilization, **23** 1098–1116.

Protein NMR

Solution Structure of the Kringle Domain fror Urokinase-type Plasminogen Activator, **23** 1548–1559.
Generation of a Non-prolyl *cis* Peptide Bond i Ribonuclease T_1, **240**, 288–293.
^{1}H-NMR Assignment and Solution Structure of Huma Acidic Fibroblast Growth Factor Activated by Inosito Hexasulfate, **242**, 81–98.

Protein oligomerization

Interaction of Tn*5* Transposase with the Transposo Termini, **235**, 486–495.
A Functional Analysis of the Tn*5* Transposase Identification of Domains Required for DNA Bindin and Multimerization, **241**, 166–177.

Protein phosphatase 1

Co-crystallization of the Catalytic Subunit of th Serine/Threonine Specific Protein Phosphatase 1 fron Human in Complex with Microcystin LR, **235** 763–766.

Protein phosphorylation

The Human Immunodeficiency Virus Type 1 Encode Vpu Protein is Phosphorylated by Casein Kinase-2 (CK-2) at Positions Ser52 and Ser56 within a Predicte α-Helix-Turn-α-Helix-Motif, **236**, 16–25.
Purification and Crystallization of the Catalytic Domain of Human Protein Tyrosine Phosphatase 1B Expressed in *Escherichia coli*, **239**, 726–730.
In Vitro Interaction of Nitrate-responsive Regulatory Protein NarL with DNA Target Sequences in the *fdnG narG*, *narK* and *frdA* Operon Control Regions o *Escherichia coli* K-12, **241**, 150–165.

Protein polymerization
To Build a Virus Capsid. An Equilibrium Model of the Self Assembly of Polyhedral Protein Complexes, **241**, 59–67.

Protein purification
Co-crystallization of the Catalytic Subunit of the Serine/Threonine Specific Protein Phosphatase 1 from Human in Complex with Microcystin LR, **235**, 763–766.
Purification and Crystallization of the Catalytic Domain of Human Protein Tyrosine Phosphatase 1B Expressed in *Escherichia coli*, **239**, 726–730.
The Major Dimerization Determinants of the Nitrogen Regulatory Protein NTRC from Enteric Bacteria Lie in Its Carboxy-terminal Domain, **241**, 233–245.
Purification and Crystallization of the Endoglycosidase PNGase F, a Peptide:*N*-glycosidase from *Flavobacterium meningosepticum*, **241**, 624–626.

Protein S12
Selective Perturbation of G530 of 16 S rRNA by Translational Miscoding Agents and a Streptomycin-dependence Mutation in Protein S12, **235**, 156–172.

Protein Secondary structure
Use of Amino Acid Environment-dependent Substitution Tables and Conformational Propensities in Structure Prediction from Aligned Sequences of Homologous Proteins. II. Secondary Structures, **238**, 693–708.

Protein secondary structure
Analysis of Two-residue Turns in Proteins, **238**, 733–747.
Kinesin Light Chain Isoforms in *Caenorhabditis elegans*, **240**, 507–512.
The Origins of Protein Secondary Structure. Effects of Packing Density and Hydrogen Bonding Studied by a Fast Conformational Search, **241**, 214–225.
Does Compactness Induce Secondary Structure in Proteins? A Study of Poly-alanine Chains Computed by Distance Geometry, **241**, 557–573.
Protein Secondary Structure from Circular Dichroism Spectroscopy. Combining Variable Selection Principle and Cluster Analysis with Neural Network, Ridge Regression and Self-consistent Methods, **242**, 497–507.
The Role of Side-chain Hydrogen Bonds in the Formation and Stabilization of Secondary Structure in Soluble Proteins, **243**, 504–519.
Stabilization of a Type VI Turn in a Family of Linear Peptides in Water Solution, **243**, 736–753.

Protein secretion
Correctly Folded T-cell Receptor Fragments in the Periplasm of *Escherichia coli*. Influence of Folding Catalysts, **242**, 655–669.

Protein, *see also* Amino acid sequence structure

Protein stability
Domain Interactions and Connecting Peptides in Lens Crystallins, **235**, 84–88.
Structural Characterization of the FK506 Binding Protein Unfolded in Urea and Guanidine Hydrochloride, **236**, 637–648.
A Charge Change in an Evolutionarily-conserved Region of the Myosin Globular Head Prevents Myosin and Thick Filament Accumulation in *Drosophila*, **236**, 697–702.
Predicting Protein Mutant Energetics by Self-consistent Ensemble Optimization, **236**, 918–939.
The Role of Interhelical Ionic Interactions in Controlling Protein Folding and Stability. *De Novo* Designed Synthetic Two-stranded αHelical Coiled-Coils, **237**, 500–512.
Molecular Mechanisms of Acid Denaturation. The Role of Histidine Residues in the Partial Unfolding of Apomyoglobin, **237**, 588–601.
Structural Origins of pH and Ionic Strength Effects on Protein Stability. Acid Denaturation of Sperm Whale Apomyoglobin, **237**, 602–614.
Intact Disulfide Bonds Decelerate the Folding of Ribonuclease T1, **239**, 713–725.
Sequence Statistics Reliably Predict Stabilizing Mutations in a Protein Domain, **240**, 188–192.
Electrophoretic Characterization of the Denatured States of Staphylococcal Nuclease, **242**, 670–682.
The Role of Side-chain Hydrogen Bonds in the Formation and Stabilization of Secondary Structure in Soluble Proteins, **243**, 504–519.
Proton NMR Studies of the Structural and Dynamical Effect of Chemical Modification of a Single Aromatic Side-chain in a Snake Cardiotoxin. Relation to the Structure of the Putative Binding Site and the Cytolytic Activity of the Toxin, **243**, 719–735.
Stability against Denaturation Mechanisms in Halophilic Malate Dehydrogenase Adapt to Solvent Conditions, **244**, 436–447.

Protein structure
Crystal Structure of Apo-avidin from Hen Egg-white, **235**, 42–46.
Conformational Behaviour of the Active and Inactive Forms of the Nucleocapsid NCp7 of HIV-1 Studied by ^{1}H NMR, **235**, 287–301.
Linker Insertion Mutagenesis of *Drosophila* Topoisomerase II. Probing The Structure of Eukaryotic Topoisomerase II, **235**, 436–447.
Significance of Root-Mean-Square Deviation in Comparing Three-dimensional Structures of Globular Proteins, **235**, 625–634.
High-Resolution Crystallographic Analysis of a Co-operative Dimeric Hemoglobin, **235**, 657–681.
Planar Stacking Interactions of Arginine and Aromatic Side-Chains in Proteins, **235**, 709–717.
Determination of the Nuclear Magnetic Resonance Structure of the DNA-binding Domain of the *P22 c2* Repressor (1 to 76) in Solution and Comparison with the DNA-binding Domain of the *434* Repressor, **235**, 1003–1020.
Lattice Model Simulations of Polypeptide Chain Folding, **235**, 1032–1043.
^{1}H Nuclear Magnetic Resonance Studies of Hen Lysozyme-*N*-Acetylglucosamine Oligosaccharide Complexes in Solution. Application of Chemical Shifts for the Comparison of Conformational Changes in Solution and in the Crystal, **235**, 1072–1087.
Solution Structure of the Kringle Domain from Urokinase-type Plasminogen Activator, **235**, 1548–1559.
The Human Immunodeficiency Virus Type 1 Encoded Vpu Protein is Phosphorylated by Casein Kinase-2 (CK-2) at Positions Ser52 and Ser56 within a Predicted α-Helix-Turn-α-Helix-Motif, **236**, 16–25.
Structural Dependence of Post-translational Modification and Reductive Acetylation of the Lipoyl Domain of the Pyruvate Dehydrogenase Multienzyme Complex, **236**, 209–216.
X-ray Analysis at 2·0 Å Resolution of Mouse Submaxillary Renin Complexed with a Decapeptide Inhibitor CH-66, Based on the 4–16 Fragment of Rat Angiotensinogen, **236**, 342–360.
Crystallization and Preliminary X-ray Analysis of Human Plasma Apolipoprotein C-I, **236**, 382–384.
Predicting Protein Mutant Energetics by Self-consistent Ensemble Optimization, **236**, 918–939.
Purification, Characterization and Crystallization of *Acanthamoeba* Profilin Expressed in *Escherichia coli*, **236**, 950–952.
Four Helix Bundle Diversity in Globular Proteins, **236**, 1356–1368.
Principles Determining the Structure of β-Sheet Barrels in Proteins. I. A Theoretical Analysis, **236**, 1369–1381.
Principles Determining the Structure of β-Sheet Barrels in Proteins. II The Observed Structures, **236**, 1382–1400.
Aspects of Receptor Binding and Signalling of Interleukin-4 Investigated by Site-Directed Mutagenesis and NMR Spectroscopy, **237**, 423–436.
Molecular Mechanisms of Acid Denaturation. The Role of Histidine Residues in the Partial Unfolding of Apomyoglobin, **237**, 588–601.

Analysis of the Solution Structure of Human Interleukin-4 Determined by Heteronuclear Three-dimensional Nuclear Magnetic Resonance Techniques, **238**, 23–41.

Nuclear Magnetic Resonance Solution Structure of the *fushi tarazu* Homeodomain from *Drosophila* and Comparison with the *Antennapedia* Homeodomain, **238**, 333–345.

Satisfying Hydrogen Bonding Potential in Proteins, **238**, 777–793.

Solution Structure and Dynamics of PEC-60, a Protein of the Kazal Type Inhibitor Family, Determined by Nuclear Magnetic Resonance Spectroscopy, **239**, 137–153.

Measuring Residue Associations in Protein Structures. Possible Implications for Protein Folding, **239**, 227–248.

Detecting Patterns in Protein Sequences, **239**, 698–712.

Structure of Cobra Cardiotoxin CTXI as Derived from Nuclear Magnetic Resonance Spectroscopy and Distance Geometry Calculations, **240**, 445–458.

Crystallization and Structure Determination of Bovine Profilin at 2·0 Å Resolution, **240**, 459–475.

(His)C^{ε}-H···O=C< Hydrogen Bond in the Active Sites of Serine Hydrolases, **241**, 83–93.

Purification, Characterization and Crystallization of Human Platelet Profilin Expressed in *Escherichia coli*, **241**, 480–482.

The Solution Structure of Melanoma Growth Stimulating Activity, **242**, 252–270.

Refined Crystal Structure of Porcine Class Pi Glutathione S-Transferase (pGST P1-1) at 2·1 Å Resolution, **243**, 72–92.

Exploring Conformational Space with a Simple Lattice Model for Protein Structure, **243**, 668–682.

Protein Three-dimensional Structure Determination and Sequence-specific Assignment of ^{13}C and ^{15}N-separated NOE Data. A Novel Real-space *ab initio* Approach, **243**, 696–718.

Proton NMR Studies of the Structural and Dynamical Effect of Chemical Modification of a Single Aromatic Side-chain in a Snake Cardiotoxin. Relation to the Structure of the Putative Binding Site and the Cytolytic Activity of the Toxin, **243**, 719–735.

Structural Features can be Unconserved in Proteins with Similar Folds. An Analysis of Side-chain to Side-chain Contacts Secondary Structure and Accessibility, **244**, 332–350.

Structure of Protocatechuate 3,4-Dioxygenase from *Pseudomonas aeruginosa* at 2·15 Å Resolution, **244**, 586–608.

Protein structure analysis

The Nuclear Magnetic Resonance Solution Structure of the Mixed Disulfide between *Escherichia coli* Glutaredoxin(C14S) and Glutathione, **235**, 1585–1597.

Amino/Aromatic Interactions in Proteins: Is the Evidence Stacked Against Hydrogen Bonding?, **239**, 315–331.

Protein structure prediction

Redefining the Goals of Protein Secondary Structure Prediction, **235**, 13–26.

Bona Fide Prediction of Aspects of Protein Conformation. Assigning Interior and Surface Residues from Patterns of Variation and Conservation in Homologous Protein Sequences, **235**, 926–958.

Factors Influencing the Ability of Knowledge-based Potentials to Identify Native Sequence-Structure Matches, **235**, 1598–1613.

Folding the Main Chain of Small Proteins with the Genetic Algorithm, **236**, 844–861.

Prediction of Transmembrane Segments in Proteins Utilising Multiple Sequence Alignments, **237**, 182–192.

Use of Amino Acid Environment-dependent Substitution Tables and Conformational Propensities in Structure Prediction from Aligned Sequences of Homologous Proteins. I. Solvent Accessibility Classes, **238**, 682–692.

Use of Amino Acid Environment-dependent Substitution Tables and Conformational Propensities in Structure Prediction from Aligned Sequences of Homologous Proteins. II. Secondary Structures, **238**, 693–708.

Exploring Conformational Space with a Simple Lattice Model for Protein Structure, **243**, 668–682.

Protein superfamilies

Computer Analysis of Bacterial Haloacid Dehalogenases Defines a Large Superfamily of Hydrolases with Diverse Specificity. Application of an Iterative Approach to Database Search, **244**, 125–132.

Protein targeting

An Alternative Splicing Modifies the C-Terminal End of Tryptophanyl-tRNA Synthetase in Murine Embryonic Stem Cells, **242**, 599–603.

Protein tertiary structure

Tertiary Structure of Erabutoxin b in Aqueous Solution as Elucidated by Two-dimensional Nuclear Magnetic Resonance, **240**, 155–166.

^{1}H-NMR Assignment and Solution Structure of Human Acidic Fibroblast Growth Factor Activated by Inositol Hexasulfate, **242**, 81–98.

Protein translocation

Export and Trimerization Pathways of Maltoporin Overlap in the Inner Membrane of *Escherichia coli*, **238**, 555–562.

Protein tyrosine phosphatases

Purification and Crystallization of the Catalytic Domain of Human Protein Tyrosine Phosphatase 1B Expressed in *Escherichia coli*, **239**, 726–730.

Proteinase

Crystallization and Preliminary X-ray Diffraction Studies on a Trypsin/Chymotripsin Double-headed Inhibitor from Horse Gram, **235**, 364–366.

Characterization of a *Plasmodium vivax* Cysteine Proteinase Gene Identifies Uniquely Conserved Amino Acids that May Mediate the Substrate Specificity of Malarial Hemoglobinases, **241**, 312–316.

A Crystallographic Re-investigation into the Structure of *Streptomyces griseus* Proteinase A Reveals an Acyl-enzyme Intermediate, **241**, 574–587.

Proteinase inhibitor

Solution Structure of Turkey Ovomucoid Third Domain as Determined from Nuclear Magnetic Resonance Data, **242**, 203–214.

Solution Structure of Reactive-site Hydrolyzed Turkey Ovomucoid Third Domain by Nuclear Magnetic Resonance and Distance Geometry Methods, **242**, 215–230.

Protein-DNA crystallization

Crystallization and Preliminary X-ray Analysis of an *Escherichia coli* Purine Repressor-Hypoxanthine-DNA Complex, **242**, 302–305.

Protein-DNA equilibria

Linkage of pH, Anion and Cation Effects in Protein-Nucleic Acid Equilibria. *Escherichia coli* SSB Protein-Single Stranded Nucleic Acid Interactions, **236**, 165–178.

Protein-DNA interaction, *see* DNA-protein interactions

Protein–drug interactions

Drug–Protein Interactions. Refined Structures of Three Sulfonamide Drug Complexes of Human Carbonic Anhydrase I Enzyme, **243**, 298–309.

Protein-ligand interaction

Rational Automatic Search Method for Stable Docking Models of Protein and Ligand, **243**, 310–326.

Protein–lipid interaction

The Specific Binding Site of the Volatile Anesthetic Diiodomethane to Purple Membrane by X-ray Diffraction, **238**, 297–301.

Protein-lipid interactions

Structure Characterization of Membrane Bound and Surface Adsorbed Protein, **237**, 1–4.

Protein-membrane interaction
Three-dimensional Structure of Membrane-bound Annexin V. A Correlative Electron Microscopy-X-ray Crystallography Study, **238**, 199–213.

Protein-nucleic acid interactions
See also DNA-protein interactions.
Computer Simulation of Protein-induced Structural Changes in Closed Circular DNA, **242**, 271–290.
Excess Counterion Accumulation around Branched Nucleic Acids, **243**, 919–929.

Protein–protein interactions
Role of the Sigma^{70} Subunit of *Escherichia coli* RNA Polymerase in Transcription Activation, **235**, 405–413.
PUZZLE: A New Method for Automated Protein Docking Based on Surface Shape Complementarity, **235**, 1021–1031.
Deletions within the DNA Recognition Subunit of M.*Eco*R124I that Identify a Region Involved in Protein–Protein Interactions between HsdS and HsdM, **241**, 35–43.
Functional Map of the Alpha Subunit of *Escherichia coli* RNA Polymerase. Deletion Analysis of the Amino-terminal Assembly Domain, **242**, 107–115.
Reaching Out. Locating and Lengthening the Interdomain Linker in AraC Protein, **242**, 330–338.
The Third IgG-Binding Domain from Streptococcal Protein G. An Analysis by X-ray Crystallography of the Structure Alone and in a Complex with Fab, **243**, 906–918.
Structure Determination of Aquomet Porcine Hemoglobin at 2·8 Å Resolution, **244**, 541–553.

Protein-RNA interaction
Characterization of an *in Vitro*-selected RNA Ligand to the HIV-1 Rev Protein, **235**, 237–247.
Visualization of Protein–Nucleic Acid Interactions Involved in the *in Vitro* Assembly of the *Escherichia coli* 50 S Ribosomal Subunit, **235**, 1239–1250.
Mutational Analysis of the C-Terminal Region of *Saccharomyces cerevisiae* Ribosomal Protein L25 *in Vitro* and *in Vivo* Demonstrates the Presence of Two Distinct Functional Elements, **240**, 243–255.
In Vitro Selection of Small RNAs that Bind to *Escherichia coli* Phenylalanyl-tRNA Synthetase, **242**, 186–192.
Amino Acid Requirements of the Nucleocapsid Protein of HIV-1 for Increasing Catalytic Activity of a Ki-ras Ribozyme *in Vitro*, **242**, 422–429.
Mutational and Structural Analysis of the RNA Binding Site for *Escherichia coli* Ribosomal Protein S7, **244**, 74–85.
Bases Defining an Ammonium and Magnesium Ion-Dependent Tertiary Structure Within the Large Subunit Ribosomal RNA, **244**, 572–585.

B_{12}-proteins
Crystallization and Preliminary X-ray Diffraction Studies of a Corrinoid Protein from *Sporomusa ovata*, **236**, 388–389.

Protein-saccharide interactions
Structural Changes of Active Site Cleft and Different Saccharide Binding Modes in Human Lysozyme Co-crystallized with Hexa-*N*-acetyl-chitohexaose at pH 4·0, **244**, 522–540.

Proteolysis
See also Limited proteolysis.
Interaction of Tn*5* Transposase with the Transposon Termini, **235**, 486–495.
PA28 Activator Protein Forms Regulatory Caps on Proteasome Stacked Rings, **236**, 7–15.
Structure of Tetraubiquitin Shows How Multiubiquitin Chains Can be Formed, **236**, 601–609.

Proteus vulgaris
Crystallization and Preliminary X-ray Investigation of Holotryptophanases from *Escherichia coli* and *Proteus vulgaris*, **235**, 783–786.

Protist
Complete Sequence of the Mitochondrial DNA of the Chlorophyte Alga *Prototheca wickerhamii*. Gene Content and Genome Organization, **237**, 75–86.

Protocatechuate 3,4-dioxygenase
Crystallization and Preliminary X-ray Analysis of Protocatechuate 3,4-Dioxygenase from *Acinetobacter calcoaceticus*, **236**, 372–373.

Proton pump
The Proton Transfers in the Cytoplasmic Domain of Bacteriorhodopsin are Facilitated by a Cluster of Interacting Residues, **239**, 401–414.
Energy Coupling in an Ion Pump. The Reprotonation Switch of Bacteriorhodopsin, **243**, 621–638.
New Crystal Forms and Preliminary X-ray Diffraction Studies of Mitochondrial Cytochrome bc_1 Complex from Bovine Heart, **244**, 238–241.

Pro-vitellogenin cleavage site
Analysis of Mosquito Vitellogenin cDNA. Similarity with Vertebrate Phosvitins and Arthropod Serum Proteins, **237**, 641–647.

Pseudoknot
Translational Control in Production of Transposase and in Transposition of Insertion Sequence IS*3*, **235**, 1406–1420.

Pseudomonas aeruginosa
Crystallization and Preliminary X-ray Analysis of a New Crystal form of Nitrite Reductase from *Pseudomonas aeruginosa*, **243**, 347–350.
Structure of Protocatechuate 3,4-Dioxygenase from *Pseudomonas aeruginosa* at 2·15 Å Resolution, **244**, 586–608.

Pseudomonas arvilla
Crystallization of Catechol-1,2 Dioxygenase from *Pseudomonas arvilla C-1*, **236**, 377–378.

***Pseudomonas* sp. strain CF600**
Preliminary Crystallographic Analysis of 4-Oxalocrotonate Tautomerase Reveals the Oligomeric Structure of the Enzyme, **243**, 799–801.

Pseudosubstrate
Crystallization and Preliminary X-ray Analysis of the Auto-inhibited Twitchin Kinase, **236**, 1259–1261.

Pseudo-symmetry
Cytidine Deaminase. The 2·3 Å Crystal Structure of an Enzyme : Transition-state Analog Complex, **235**, 635–656.
Crystallisation of the Glycyl-tRNA Synthetase from *Thermus thermophilus* and Initial Crystallographic Data, **241**, 732–735.

PtK2 cells
A Monoclonal Antibody Epitope on Keratin 8 Identified Using a Phage Peptide Library, **235**, 61–67.

Pulsed field gel electrophoresis
Thymine Starvation-induced Structural Changes in *Escherichia coli* DNA. Detection by Pulsed Field Gel Electrophoresis and Evidence for Involvement of Homologous Recombination, **243**, 611–620.

Purification
Preliminary X-ray Analysis of a Truncated Form of Recombinant Fructose-2,6-bisphosphatase, **235**, 1147–1151.
Crystallization and Low Temperature Diffraction Studies of the DNA Binding Domain of the Single-stranded DNA Binding Protein from *Escherichia coli*, **240**, 396–399.
Purification, Crystallization and Preliminary X-ray Diffraction Studies of Alpha-Toxin of *Clostridium perfringens*, **244**, 648–650.

Purple membrane
The Specific Binding Site of the Volatile Anesthetic Diiodomethane to Purple Membrane by X-ray Diffraction, **238**, 297–301.

PurR
Crystallization and Preliminary X-ray Analysis of an *Escherichia coli* Purine Repressor-Hypoxanthine-DNA Complex, **242**, 302–305.

***put* repressor**
Sequence Analysis Identifies the Proline Dehydrogenase and Δ^1-Pyrroline-5-carboxylate Dehydrogenase Domains of the Multifunctional *Escherichia coli* PutA Protein, **243**, 950–956.

***Pvu*Rts1I**
Molecular Cloning and Expression of a Novel Hydroxymethylcytosine-specific Restriction Enzyme (*Pvu*Rts1I) Modulated by Glucosylation of DNA, **242**, 45–61.

***pyrBI* operon**
An *Escherichia coli* RNA Polymerase Defective in Transcription due to its Overproduction of Abortive Initiation Products, **236**, 72–80.

Pyridoxal-5′-phosphate
Crystallization and Preliminary X-ray Analysis of Wild-type and K272A Mutant Glutamate 1-Semialdehyde Aminotransferase from *Synechococcus*, **242**, 591–594.
Crystallization and Preliminary X-ray Analysis of Recombinant 1-Aminocyclopropane-1-carboxylate Synthase from Apple. A Key Enzyme in the Biosynthesis of the Plant Hormone Ethylene, **243**, 947–949.

Pyrimidine biosynthesis
Revision in Sequence of CAD Aspartate Transcarbamylase Domain of *Drosophila*, **243**, 364–366.

Pyrimidine ring fragmentation products
Pyrimidine Ring Fragmentation Products. Effects of Lesion Structure and Sequence Context on Mutagenesis, **236**, 514–530.

Pyrimidine·purine·pyrimidine triplexes
Solution Structure and Hydration Patterns of a Pyrimidine·Purine·Pyrimidine DNA Triplex Containing a Novel T·CG Base-triple, **241**, 600–619.

Pyrimidinone
Ligand-induced Conformational States of the Cytosine-specific DNA methyltransferase M.*Hga*I-2, **235**, 545–553

Δ^1-Pyrroline-5-carboxylate dehydrogenase
Sequence Analysis Identifies the Proline Dehydrogenase and Δ^1-Pyrroline-5-carboxylate Dehydrogenase Domains of the Multifunctional *Escherichia coli* PutA Protein, **243**, 950–956.

Pyruvate dehydrogenase
Structural Dependence of Post-translational Modification and Reductive Acetylation of the Lipoyl Domain of the Pyruvate Dehydrogenase Multienzyme Complex, **236**, 209–216.
Refined Structure of Transketolase from *Saccharomyces cerevisiae* at 2·0 Å Resolution, **238**, 387–404.

Pyruvate oxidase
The Refined Structures of a Stabilized Mutant and of Wild-type Pyruvate Oxidase from *Lactobacillus plantarum*, **237**, 315–335.

Quadruplex
Three-dimensional Solution Structure of the Thrombin-binding DNA Aptamer d(GGTTGGTGTGGTTGG), **235**, 1532–1547.

Quasi-elastic light scattering
Quantitative Analysis of Crystal Growth. Tryptophanyl-tRNA Synthetase Crystal Polymorphism and Its Relationship to Catalysis, **238**, 346–365.

Quasi-equivalence
Fungal Virus Capsids are Cytoplasmic Compartments for the Replication of Double-stranded RNA Formed a Icosahedral Shells of Asymmetric Gag Dimers, **244**, 255–258.

Quaternary structure
Crystallization and Quaternary Structure Analysis of th NAD^+-dependent Leucine Dehydrogenase fro *Bacillus sphaericus*, **236**, 663–665.
The 1·8 Å Structure of Carbonmonoxy-β_4 Hemoglobin Analysis of Homotetramer with the R Quaternar Structure of Liganded $\alpha_2\beta_2$ Hemoglobin, **236**, 817–830
Structural Analysis of *Urechis caupo* Hemoglobin, **237**, 87–97.
Prediction of the Folding Pathways and Structure of th GCN4 Leucine Zipper, **237**, 361–367.

Quinate pathways
Crystallization of a Type II Dehydrogenase fro *Mycobacterium tuberculosis*, **241**, 488–491.

Quinolone
The Complex of DNA Gyrase and Quinolone Drugs wit DNA Forms a Barrier to Transcription by RN Polymerase, **242**, 351–363.

Quinone oxidoreductase
Crystallization and Preliminary X-ray Diffraction Studie on a Soluble *Escherichia coli* Quinone Oxidoreductase **240**, 501–503.

R state
The 1·8 Å Structure of Carbonmonoxy-β_4 Hemoglobin Analysis of Homotetramer with the R Quaternary Structure of Liganded $\alpha_2\beta_2$ Hemoglobin, **236**, 817–830
The 1·9 Å Structure of Deoxyβ_4 Hemoglobin. Analysis of the Partitioning of Quaternary-associated and Ligand-induced Changes in Tertiary Structure, **236**, 831–843.

Rab3
Crystallization and Preliminary Crystallographic Data for Rab Guanine Nucleotide Dissociation Inhibitor (RabGDI) from Bovine Brain, **244**, 469–473.

RabGDI
Crystallization and Preliminary Crystallographic Data for Rab Guanine Nucleotide Dissociation Inhibitor (RabGDI) from Bovine Brain, **244**, 469–473.

Radial distribution function
Protein Hydration Observed by X-ray Diffraction. Solvation Properties of Penicillopepsin and Neuraminidase Crystal Structures, **243**, 100–115.

Ramachandran plot
Evidence for Strained Interactions between Side-chains and the Polypeptide Backbone, **235**, 27–32.

Raman spectra
Hydrogen Exchange Dynamics of the P22 Virion Determined by Time-resolved Raman Spectroscopy. Effects of Chromosome Packaging on the Kinetics of Nucleotide Exchanges, **241**, 68–82.

Random sequences
Volume Changes in Protein Evolution, **236**, 1067–1078.

RANTES
Crystallization and Preliminary X-ray Diffraction Studies of Human RANTES, **242**, 589–590.

Rape seed
Crystallization of the NADH-specific Enoyl Acyl Carrier Protein Reductase from *Brassica napus*, **237**, 240–242.

RARE
The Promoter of the H1° Histone Gene contains a DNA Element bound by Retinoic Acid Receptors, **242**, 37–44.

Rat
Crystallization and Preliminary X-ray Analysis of C-reactive Protein from Rat, **235**, 767–771.

Rate constant
Amino Acid Requirements of the Nucleocapsid Protein of HIV-1 for Increasing Catalytic Activity of a Ki-ras Ribozyme *in Vitro*, **242**, 422–429.

Rate-limitation
Stalling of *Escherichia coli* RNA Polymerase in the +6 to +12 Region *in Vivo* is Associated with Tight Binding to Consensus Promoter Elements, **239**, 455–465.

Rational drug design
Rational Automatic Search Method for Stable Docking Models of Protein and Ligand, **243**, 310–326.

Reaction states
Structural Changes of Active Site Cleft and Different Saccharide Binding Modes in Human Lysozyme Co-crystallized with Hexa-*N*-acetyl-chitohexaose at pH 4·0, **244**, 522–540.

Reactive oxygen species
Oxygen Radical Induced Mutagenesis is DNA Polymerase Specific, **235**, 33–41.

Reading frame
Evidence that GHN Phase Bias does not Constitute a Framing Code, **235**, 389–395.

Readthrough
A DNA Minor Groove-binding Ligand Both Potentiates and Arrests Transcription by RNA Polymerase II. Elongation Factor SII Enables Readthrough at Arrest Sites, **236**, 725–737.
RNA Chain Elongation and Termination by Mammalian RNA Polymerase III. Analysis of tRNA Gene Transcription by Imposing a Reversible Factor-mediated Block to Elongation using a Sequence-specific DNA Binding Protein, **244**, 482 493.

RecA protein
Functional Characterization of Residues in the P-loop Motif of the RecA Protein ATP Binding Site, **237**, 20–34.
Resolution of the Three-stranded Recombination Intermediate Made by RecA Protein. An Essential Role of ATP Hydrolysis, **238**, 540–554.

Receptor
Preliminary Crystallographic Studies of the Ligand-binding Domain of the Thyroid Hormone Receptor Complexed with Triiodothyronine, **237**, 236–239.
Two Crystal Forms of the Extracellular Domain of Type I Tumor Necrosis Factor Receptor, **239**, 332–335.
Nerve Growth Factor in Different Crystal Forms Displays Structural Flexibility and Reveals Zinc Binding Sites, **239**, 385–400.
Alterations of Receptor Specificities of Coliphages of the T2 Family, **240**, 105–110.
Determinants of Receptor Specificity of Coliphages of the T4 Family. A Chaperone Alters the Host Range, **241**, 524–533.
The Promoter of the H1° Histone Gene contains a DNA Element bound by Retinoic Acid Receptors, **242**, 37–44.
Domains of Interaction between Alpha Interferon and its Receptor Components, **243**, 245–257.
Calcium Ion-induced Structural Changes in Bacteriophage ϕX174, **244**, 291–300.
Transmembrane Signaling. Mutational Analysis of the Cytoplasmic Linker Region of Taz1-1, a Tar-EnvZ Chimeric Receptor in *Escherichia coli*, **244**, 477–481.

Receptors
BmCF1, a *Bombyx mori* RXR-type Receptor Related to the *Drosophila ultraspiracle*, **238**, 479–486.

RecF pathway
Purification and Characterization of the *Escherichia coli* RecO Protein. Renaturation of Complementary Single-stranded DNA Molecules Catalyzed by the RecO Protein, **236**, 124–138.

RecO protein
Purification and Characterization of the *Escherichia coli* RecO Protein. Renaturation of Complementary Single-stranded DNA Molecules Catalyzed by the RecO Protein, **236**, 124–138.

Recombinant production
Changes in Calcium and Collagen IV Binding Caused by Mutations in the EF Hand and Other Domains of Extracellular Matrix Protein BM40 (SPARC, Osteonectin), **238**, 563–574.

Recombinant protein
Crystallization and Preliminary X-ray Investigation of a Recombinant Outer Membrane Protein from *Neisseria meningitis*, **235**, 1154–1155.
Arabidopsis thaliana NAPHP Thioredoxin Reductase. cDNA Characterization and Expression of the Recombinant Protein in *Escherichia coli*, **235**, 1357–1363.
The Role of the L-Chain in Ferritin Iron Incorporation. Studies of Homo and Heteropolymers, **238**, 649–654.

Recombinase
A Novel Site-specific Recombinase Encoded by the *Streptococcus pyogenes* Plasmid pSM19035, **238**, 159–172.

Recombination
See also Homologous recombination.
Holliday Junction Crossover Topology, **236**, 91 105.
Purification and Characterization of the *Escherichia coli* RecO Protein. Renaturation of Complementary Single-stranded DNA Molecules Catalyzed by the RecO Protein, **236**, 124–138.
A Chloroplast Group I Intron Undergoes the First Step of Reverse Splicing into Host Cytoplasmic 5·8 S rRNA. Implications for Intron-mediated RNA Recombination, Intron Transposition and 5·8 S rRNA Structure, **236**, 455–468.
Structure of Four-way DNA Junctions containing a Nick in One Strand, **238**, 62–74.
A Parallel DNA Triplex as a Model for the Intermediate in Homologous Recombination, **239**, 181–200.
Resolution of Immobile χ Structures by the FLP Recombinase of 2 μm Plasmid, **243**, 199–207.
Hexameric Rings of *Escherichia coli* RuvB Protein: Cooperative Assembly, Processivity and ATPase Activity, **243**, 208–215.
Single Base-Pair Deletions Induced by Bleomycin at Potential Double-strand Cleavage Sites in the *aprt* Gene of Stationary Phase Chinese Hamster Ovary D422 Cells, **243**, 216–226.
Processive Recombination by Wild-type Gin and an Enhancer-independent Mutant. Insight into the Mechanisms of Recombination Selectivity and Strand Exchange, **243**, 437–457.
Recombination-like Structure of d(CCGCGG), **243**, 484–493.
Kinetic Analysis of the Catalysis of Strand Transfer From Internal Regions of Heteropolymeric RNA Templates by Human Immunodeficiency Virus Reverse Transcriptase, **243**, 558–567.
Excess Counterion Accumulation around Branched Nucleic Acids, **243**, 919–929.

Reconstruction
The Motile Major Sperm Protein (MSP) of *Ascaris suum* Forms Filaments Constructed from Two Helical Subfilaments, **243**, 60–71.

Red blood cell
Measurement of the Hemoglobin Concentration in Deoxhemoglobin S Polymers and Characterization of the Polymer Water Compartment, **244**, 100–109.

Redox enzymes
The Nuclear Magnetic Resonance Solution Structure of the Mixed Disulfide between *Escherichia coli* Glutaredoxin(C14S) and Glutathione, **235**, 1585–1597.

Reductase
Arabidopsis thaliana NAPHP Thioredoxin Reductase. cDNA Characterization and Expression of the Recombinant Protein in *Escherichia coli*, **235**, 1357–1363.

Reduction potential
Mutation of Tyrosine-67 to Phenylalanine in Cytochrome *c* Significantly Alters the Local Heme Environment, **235**, 1326–1341.
The Role of a Conserved Internal Water Molecule and Its Associated Hydrogen Bond Network in Cytochrome *c*, **236**, 786–799.

Refined crystal structures
Drug–Protein Interactions. Refined Structures of Three Sulfonamide Drug Complexes of Human Carbonic Anhydrase I Enzyme, **243**, 298–309.

Refinement
Protein Hydration Observed by X-ray Diffraction. Solvation Properties of Penicillopepsin and Neuraminidase Crystal Structures, **243**, 100–115.

3′-untranslated region
Complete Sequence of 3′-Untranslated Region of Tau from Rat Central Nervous System. Implications for mRNA Heterogeneity, **241**, 325–331.

Regulation
Specific Interactions of *Erwinia chrysanthemi* KdgR Repressor with Different Operators of Genes Involved in Pectinolysis, **236**, 427–440.
Tropomyosin Length and Two-stranded F-actin Flexibility in the Thin Filament, **243**, 520–529.
Calcium Ion-induced Structural Changes in Bacteriophage ϕX174, **244**, 291–300.

Regulatory signal
The Activation of *Escherichia coli* Aspartate Transcarbamylase by ATP. Specific Involvement of Helix H2′ at the Hydrophobic Interface Between the Two Domains of the Regulatory Chains, **242**, 139–149.

Regulatory site
Toward a Mechanism for the Allosteric Transition of Pig Kidney Fructose-1,6-Bisphosphatase, **244**, 609–624.

^{15}N Relaxation
Backbone Dynamics of a Highly Disordered 131 Residue Fragment of Staphylococcal Nuclease, **242**, 527–546.

Relaxation matrix refinement
Nuclear Magnetic Resonance Solution Structure of the Arc Repressor Using Relaxation Matrix Calculations, **236**, 328–341.

Release factor
The Concentration of Polypeptide Chain Release Factors 1 and 2 at Different Growth Rates of *Escherichia coli*, **238**, 302–308.
Genetic Implication for an Interaction Between Release Factor One and Ribosomal Protein L7/L12 *in vivo*, **242**, 614–618.

Renaturation
Formation of α-Helix 88–98 is Essential in the Establishment of Higher-order Structure from Reduced Lysozyme, **235**, 1312–1317.
DNA-Dependent Renaturation of an Insoluble DNA Binding Protein. Identification of the RhaS Binding Site at *rhaBAD*, **243**, 821–829.

Renin
X-ray Analysis at 2·0 Å Resolution of Mouse Submaxillary Renin Complexed with a Decapeptide Inhibitor CH-66, Based on the 4–16 Fragment of Rat Angiotensinogen, **236**, 342–360.

Repair
See also DNA repair.
Purification and Characterization of the *Escherichia coli* RecO Protein. Renaturation of Complementary Single-stranded DNA Molecules Catalyzed by the RecO Protein, **236**, 124–138.

Repeated elements
Complete Sequence of the Mitochondrial DNA of the Chlorophyte Alga *Prototheca wickerhamii*. Gene Content and Genome Organization, **237**, 75–86.

Repetitive DNA
See also DNA repeats.
A Novel tRNA Species as an Origin of Short Interspersed Repetitive Elements (SINEs). Equine SINEs May Have Originated From $tRNA^{Ser}$, **239**, 731–735.
The Dynamics of Murine LINE-1 Subfamily Amplification, **241**, 390–397.
Generality of the tRNA Origin of Short Interspersed Repetitive Elements (SINEs). Characterization of Three Different tRNA-derived Retroposons in the Octopus, **243**, 25–37.

Replicase
Identification of Recognition Elements on Bacteriophage $Q\beta$ Minus Strand RNA that are Essential for Template Activity with $Q\beta$ Replicase, **243**, 811–815.

Replication
See also DNA replication; RNA replication.
Kinetic Parameters of the Translocation of Bacteriophage T4 Gene 41 Protein Helicase on Single-stranded DNA, **235**, 1447–1458.
Complete Nucleotide Sequence of Birmingham IncPα Plasmids. Compilation and Comparative Analysis, **239**, 623–663.
HIV-1 Reverse Transcription. A Termination Step at the Center of the Genome, **241**, 651–662.

Replication fork arrest
The *Bacillus subtilis* Replication Terminator System Functions in *Escherichia coli*, **240**, 275–280.

Replication genes
Analysis of *Cis* and *Trans* Acting Elements Required for the Initiation of DNA Replication in the *Bacillus subtilis* Bacteriophage SPP1, **236**, 1324–1340.

Replication initiation
DNA Helical Instability Facilitates Initiation at the SV40 Replication Origin, **235**, 496–507.
Analysis of *Cis* and *Trans* Acting Elements Required for the Initiation of DNA Replication in the *Bacillus subtilis* Bacteriophage SPP1, **236**, 1324–1340.

Replication mapping of DNA adducts
Effects of DNA Adduct Structure and Distribution on the Mutagenicity and Genotoxicity of Two Platinum Anticancer Drugs, **236**, 1034–1048.

Replication origin
DNA Helical Instability Facilitates Initiation at the SV40 Replication Origin, **235**, 496–507.

Replication terminus
The *Bacillus subtilis* Replication Terminator System Functions in *Escherichia coli*, **240**, 275–280.
The Minimal Sequence Needed to Define a Functional DNA Terminator in *Bacillus subtilis*, **241**, 335–340.

Repression loop
The Organization of Intercistronic Regions of the Aerobactin Operon of pColV-K30 may Account for the Differential Expression of the *iucABCD iutA* Genes, **238**, 288–293.

Repressor
Crystallization and Preliminary X-ray Studies of the Diphtheria *Tox* Repressor from *Corynebacterium diphtheriae*, **244**, 654–656.

Repressor-arginine interaction
Explanation for Different Types of Regulation of Arginine Biosynthesis in *Escherichia coli* B and *Escherichia coli* K12 Caused by a Difference Between Their Arginine Repressors, **235**, 221–230.

Repressor-binding site
Specific Interactions of *Erwinia chrysanthemi* KdgR Repressor with Different Operators of Genes Involved in Pectinolysis, **236**, 427–440.

Repressor-operator interaction
See under calorimetry.

Explanation for Different Types of Regulation of Arginine Biosynthesis in *Escherichia coli* B and *Escherichia coli* K12 Caused by a Difference Between Their Arginine Repressors, **235**, 221–230.

Repressor–operator interaction
Cooperative DNA-Protein Interactions. Effects of Changing the Spacing Between Adjacent Binding Sites, **235**, 532–544.
A Thermodynamic Study of the *trp* Repressor–Operator Interaction, **238**, 669–681.
Transcription of the *xyl* Operon is Controlled in *Bacillus subtilis* by Tandem Overlapping Operators Spaced by Four Base-pairs, **243**, 413–424.

Residue associations
Measuring Residue Associations in Protein Structures. Possible Implications for Protein Folding, **239**, 227–248.

Residue packing
Principles Determining the Structure of β-Sheet Barrels in Proteins. I. A Theoretical Analysis, **236**, 1369–1381.
Principles Determining the Structure of β-Sheet Barrels in Proteins. II The Observed Structures, **236**, 1382–1400.

Residue-pair
Discrimination of Intracellular and Extracellular Proteins Using Amino Acid Composition and Residue-pair Frequencies, **238**, 54–61.

Resolvases
A Novel Site-specific Recombinase Encoded by the *Streptococcus pyogenes* Plasmid pSM19035, **238**, 159–172.
The Linkage Change of a Knotting Reaction Catalysed by Tn*3* Resolvase, **239**, 25–36.

Resonance assignment
Nuclear Magnetic Resonance ^{15}N and ^{1}H Resonance Assignments and Global Fold of Rusticyanin. Insights into the Ligation and Acid Stability of the Blue Copper Site, **244**, 370–384.

Resonance Raman
Thermodynamics of Membrane Polypeptide Oligomerization in Light-harvesting Complexes and Associated Structural Changes, **238**, 445–454.

Respiratory function
OXA1, a *Saccharomyces cerevisiae* Nuclear Gene whose Sequence is Conserved from Prokaryotes to Eukaryotes Controls Cytochrome Oxidase Biogenesis, **239**, 201–212.

Response regulator
In Vitro Interaction of Nitrate-responsive Regulatory Protein NarL with DNA Target Sequences in the *fdnG*, *narG*, *narK* and *frdA* Operon Control Regions of *Escherichia coli* K-12, **241**, 150–165.
OmpR Mutants Specifically Defective for Transcriptional Activation, **243**, 579–594.

Restrained molecular dynamics
A Model of the Complex between Single-stranded DNA and the Single-stranded DNA Binding Protein Encoded by Gene V of Filamentous Bacteriophage M13, **240**, 341–357.

Restriction and modification
Deletions within the DNA Recognition Subunit of M.*Eco*R124I that Identify a Region Involved in Protein–Protein Interactions between HsdS and HsdM, **241**, 35–43.
Interaction of *EcoP15I* DNA Methyltransferase with Oligonucleotides Containing the Asymmetric Sequence 5′-CAGCAG-3′, **242**, 378–388.
A Symmetrical Model for the Domain Structure of Type I DNA Methyltransferases, **243**, 1–5.

Restriction and modification enzymes
The *Escherichia coli prr* Region Encodes a Functional Type IC DNA Restriction System Closely Integrated with an Anticodon Nuclease Gene, **237**, 266–274.

Restriction enzyme
Crystallization and Preliminary X-ray Analysis of Restriction Endonuclease *Bam*HI–DNA Complex, **239**, 430–432.
Molecular Cloning and Expression of a Novel Hydroxymethylcytosine-specific Restriction Enzyme (*Pvu*Rts1I) Modulated by Glucosylation of DNA, **242**, 45–61.

Resurfacing
Comparison of Surface Accessible Residues in Human and Murine Immunoglobulin Fv Domains. Implication for Humanization of Murine Antibodies, **235**, 959–973.

Retina
X-ray Diffraction Study of the Live Squid Retina, **238**, 139–144.

Retinal Schiff base
The Proton Transfers in the Cytoplasmic Domain of Bacteriorhodopsin are Facilitated by a Cluster of Interacting Residues, **239**, 401–414.
Energy Coupling in an Ion Pump. The Reprotonation Switch of Bacteriorhodopsin, **243**, 621–638.

Retinoic acid
The Promoter of the H1° Histone Gene contains a DNA Element bound by Retinoic Acid Receptors, **242**, 37–44.

Retinol-binding protein
Crystallization of the Macromolecular Complex Transthyretin-Retinol-binding Protein, **244**, 110–113.

Retroid elements
Transposable Group II Introns in Fission and Budding Yeast. Site-specific Genomic Instabilities and Formation of Group II IVS p1DNAs, **243**, 157–166.

Retroposon
A Novel tRNA Species as an Origin of Short Interspersed Repetitive Elements (SINEs). Equine SINEs May Have Originated From $tRNA^{Ser}$, **239**, 731–735.
Amplification of Distinct Subfamilies of Short Interspersed Elements During Evolution of the Salmonidae, **241**, 633–644.
Generality of the tRNA Origin of Short Interspersed Repetitive Elements (SINEs). Characterization of Three Different tRNA-derived Retroposons in the Octopus, **243**, 25–37.

Retrotransposon
Analytical Study of Rat Retrotransposon VL30 RNA Dimerization *in Vitro* and Packaging in Murine Leukemia Virus, **240**, 434–444.

Retroviral matrix protein
Crystallization and Preliminary X-ray Investigation of Recombinant Simian Immunodeficiency Virus Matrix Protein, **241**, 744–746.

Retroviral proteinase
Alternative Native Flap Conformation Revealed by 2·3 Å Resolution Structure of SIV Proteinase, **239**, 97–103.

Retroviral vector
Analytical Study of Rat Retrotransposon VL30 RNA Dimerization *in Vitro* and Packaging in Murine Leukemia Virus, **240**, 434–444.

Retrovirus
HIV-1 Reverse Transcription. A Termination Step at the Center of the Genome, **241**, 651–662.

Rev
Characterization of an *in Vitro*-selected RNA Ligand to the HIV-1 Rev Protein, **235**, 237–247.
A Molecular Rheostat. Co-operative Rev Binding to Stem I of the Rev-response Element Modulates Human Immunodeficiency Virus Type-1 Late Gene Expression, **241**, 193–207.

Reverse splicing
See also Splicing.
A Chloroplast Group I Intron Undergoes the First Step of Reverse Splicing into Host Cytoplasmic 5·8 S rRNA. Implications for Intron-mediated RNA

Recombination, Intron Transposition and 5·8 S rRNA Structure, **236**, 455–468.

Reverse transcriptase
Studies on Primer Binding of HIV-1 Reverse Transcriptase Using a Fluorescent Probe, **236**, 469–479.
Crystals of HIV-1 Reverse Transcriptase Diffracting to 2·2 Å Resolution, **242**, 586–588.
DNA Double-strand Break *in vivo* at the 3′ Extremity of Exons Located Upstream of Group II Introns. Senescence and Circular DNA Introns in *Podospora* Mitochondria, **242**, 630–643.
Locations of Anti-AIDS Drug Binding Sites and Resistance Mutations in the Three-dimensional Structure of HIV-1 Reverse Transcriptase. Implications for Mechanisms of Drug Inhibition and Resistance, **243**, 369–387.
Mutational Analysis of the Fingers and Palm Subdomains of Human Immunodeficiency Virus Type-1 (HIV-1) Reverse Transcriptase, **243**, 472–483.
Kinetic Analysis of the Catalysis of Strand Transfer From Internal Regions of Heteropolymeric RNA Templates by Human Immunodeficiency Virus Reverse Transcriptase, **243**, 558–567.

Reverse transcription
HIV-1 Reverse Transcription. A Termination Step at the Center of the Genome, **241**, 651–662.

Reverse turn
Stabilization of a Type VI Turn in a Family of Linear Peptides in Water Solution, **243**, 736–753.
Three-dimensional Structure of a Type VI Turn in a Linear Peptide in Water Solution. Evidence for Stacking of Aromatic Rings as a Major Stabilizing Factor, **243**, 754–766.

Rev-response element
A Molecular Rheostat. Co-operative Rev Binding to Stem I of the Rev-response Element Modulates Human Immunodeficiency Virus Type-1 Late Gene Expression, **241**, 193–207.

RGD
Crystal Structure of the Tenth Type III Cell Adhesion Module of Human Fibronectin, **236**, 1079–1092.

RhaS
DNA-Dependent Renaturation of an Insoluble DNA Binding Protein. Identification of the RhaS Binding Site at *rhaBAD*, **243**, 821–829.

Rheumatoid factor
Crystallization and Preliminary X-ray Analysis of the Fab Fragment of a′ Human Monoclonal IgM Rheumatoid Factor (2A2), **242**, 706–708.

Rhinovirus
Investigation of Shape Variations in the Antibody Binding Site by Molecular Dynamics Computer Simulation, **236**, 1186–1195.
Structure Determination of an Fab Fragment that Neutralizes Human Rhinovirus 14 and Analysis of the Fab-Virus Complex, **240**, 127–137.

Rho factor
Deletion Analysis of the Lambda tR1 Termination Region. Effect of Sequences near the Transcript Release Sites, and the Minimum Length of Rho-dependent Transcripts, **237**, 255–265.
A Quaternary Transcription Termination Complex. Reciprocal Stabilization by Rho Factor and NusG Protein, **243**, 830–839.

Rhodanese
Chaperone-dependent Folding and Activation of Ribosome-bound Nascent Rhodanese. Analysis by Fluorescence, **244**, 319–331.

Rhodobacter capsulatus
Directed Mutational Analysis of Bacteriochlorophyll *a* Biosynthesis in *Rhodobacter capsulatus*, **237**, 622–640.

Rhodospirillum rubrum
Thermodynamics of Membrane Polypeptide Oligomerization in Light-harvesting Complexes and Associated Structural Changes, **238**, 445–454.

Ribonuclease
A Functional Mutant of $tRNA^{Arg}_2$ with Ten Extra Nucleotides in Its TFC Arm, **235**, 1369–1376.

Ribonuclease A
Complex between Bovine Ribonuclease A and Porcine Ribonuclease Inhibitor Crystallizes in a Similar Unit Cell as Free Ribonuclease Inhibitor, **241**, 288–291.

Ribonuclease E
Nucleolytic Inactivation and Degradation of the RNase III Processed *pnp* Message Encoding Polynucleotide Phosphorylase of *Escherichia coli*, **239**, 439–454.

Ribonuclease H
Kinetic Analysis of the Catalysis of Strand Transfer From Internal Regions of Heteropolymeric RNA Templates by Human Immunodeficiency Virus Reverse Transcriptase, **243**, 558–567.

Ribonuclease HI
Studies of the Interactions Between *Escherichia coli* Ribonuclease HI and Its Substrate, **243**, 782–791.

Ribonuclease II
The Processive Reaction Mechanism of Ribonuclease II, **243**, 930–943.

Ribonuclease III
Nucleolytic Inactivation and Degradation of the RNase III Processed *pnp* Message Encoding Polynucleotide Phosphorylase of *Escherichia coli*, **239**, 439–454.

Ribonuclease inhibitor
Complex between Bovine Ribonuclease A and Porcine Ribonuclease Inhibitor Crystallizes in a Similar Unit Cell as Free Ribonuclease Inhibitor, **241**, 288–291.

Ribonuclease superfamily
Refined 1·7 Å X-ray Crystallographic Structure of P-30 Protein, an Amphibian Ribonuclease with Anti-tumor Activity, **236**, 1141–1153.

Ribonuclease T_1
Generation of a Non-prolyl *cis* Peptide Bond in Ribonuclease T_1, **240**, 288–293.

Ribose
A Single 2′-Hydroxyl Group Converts *B*-DNA to *A*-DNA. Crystal Structure of the DNA-RNA Chimeric Decamer Duplex d(CCGGC)r(G)d(CCGG) with a Novel Intermolecular G·C Base-paired Quadruplet, **236**, 275–285.

Ribose-binding protein
Engineered Tyrosine Residues Serve as the Local Probes to Detect a Kinetic Intermediate in the Folding of Ribose-binding Protein, **240**, 385–395.

Ribosomal accuracy
Mutations in 23 S Ribosomal RNA Perturb Transfer RNA Selection and can Lead to Streptomycin Dependence, **235**, 813–824.

Ribosomal affinity
Translational Initiation on Structured Messengers. Another Role for the Shine-Dalgarno Interaction, **235**, 173–184.

Ribosomal mutants
Cross-hypersensitivity Effects of Mutations in 23 S rRNA Yield Insight into Aminoacyl-tRNA Binding, **244**, 151–157.

Ribosomal protein genes
Features in the 5′ Non-coding Sequences of Rabbit α and β-Globin mRNAs that Affect Translational Efficiency, **235**, 95–110.
Post-transcriptional Regulation of the *str* Operon in *Escherichia coli*. Ribosomal Protein S7 Inhibits Coupled Translation of S7 but not its Independent Translation, **235**, 111–124.
Structure and Transcription of the L11-L1-L10-L12 Ribosomal Protein Gene Operon from the Extreme

Thermophilic Archaeon *Sulfolobus acidocaldarius*, **244**, 242–249.

Ribosomal protein L7/L12
Genetic Implication for an Interaction Between Release Factor One and Ribosomal Protein L7/L12 *in vivo*, **242**, 614–618.

Ribosomal protein operon
Post-transcriptional Regulation of the *str* Operon in *Escherichia coli*. Structural and Mutational Analysis of the Target Site for Translational Repressor S7, **235**, 125–139.

Ribosomal protein S1
Translational Initiation on Structured Messengers. Another Role for the Shine-Dalgarno Interaction, **235**, 173–184.

Ribosomal protein S7
Post-transcriptional Regulation of the *str* Operon in *Escherichia coli*. Ribosomal Protein S7 Inhibits Coupled Translation of S7 but not its Independent Translation, **235**, 111–124.
Post-transcriptional Regulation of the *str* Operon in *Escherichia coli*. Structural and Mutational Analysis of the Target Site for Translational Repressor S7, **235**, 125–139.
Mutational and Structural Analysis of the RNA Binding Site for *Escherichia coli* Ribosomal Protein S7, **244**, 74–85.

Ribosomal RNA
Thermodynamics of RNA Folding in a Conserved Ribosomal RNA Domain, **237**, 560–576.

Ribosomal RNA gene
The Ribosomal RNA Gene Region in *Acanthamoeba castellanii* Mitochondrial DNA. A Case of Evolutionary Transfer of Introns between Mitochondria and Plastids?, **239**, 476–499.

Ribosomal subunit
Electron Cryomicroscopy of *Bacillus stearothermophilus* 50 S Ribosomal Subunits Crystallized on Phospholipid Monolayers, **239**, 689–697.

Ribosomal subunit 30 S
A Quantitative Model of the *Escherichia coli* 16 S RNA in the 30 S Ribosomal Subunit, **240**, 308–340.

Ribosome
Selective Perturbation of G530 of 16 S rRNA by Translational Miscoding Agents and a Streptomycin-dependence Mutation in Protein S12, **235**, 156–172.
Evidence that GHN Phase Bias does not Constitute a Framing Code, **235**, 389–395.
Visualization of Protein–Nucleic Acid Interactions Involved in the *in Vitro* Assembly of the *Escherichia coli* 50 S Ribosomal Subunit, **235**, 1239–1250.
Location of the Streptomycin Ribosomal Binding Site Explains its Pleiotropic Effects on Protein Biosynthesis, **235**, 1251–1260.
High Concentrations of ppGpp Decrease the RNA Chain Growth Rate. Implications for Protein Synthesis and Translational Fidelity During Amino Acid Starvation in *Escherichia coli*, **236**, 441–454.
Intragenic Processing in Yeast rRNA is Dependent on the 3′ External Transcribed Spacer, **239**, 170–180.
Protein Substitution in Chloroplast Ribosome Evolution. A Eukaryotic Cytosolic Protein has Replaced its Organelle Homologue (L23) in Spinach, **240**, 28–41.
Mutational Analysis of the C-Terminal Region of *Saccharomyces cerevisiae* Ribosomal Protein L25 *in Vitro* and *in Vivo* Demonstrates the Presence of Two Distinct Functional Elements, **240**, 243–255.
Starting Window, a Distinct Element in the Cap-independent Internal Initiation of Translation on Picornaviral RNA, **241**, 398–414.
Synergism between the GTPase Activities of EF-Tu·GTP and EF-G·GTP on Empty Ribosomes. Elongation Factors as Stimulators of the Ribosomal Oscillation between Two Conformations, **242**, 644–654.
Chaperone-dependent Folding and Activation of Ribosome-bound Nascent Rhodanese. Analysis by Fluorescence, **244**, 319–331.

Ribosome assembly
Visualization of Protein–Nucleic Acid Interactions Involved in the *in Vitro* Assembly of the *Escherichia coli* 50 S Ribosomal Subunit, **235**, 1239–1250.

Ribosome binding site
The Influence of Adenine-rich Motifs in the 3′ Portion of the Ribosome Binding Site on Human IFN-γ Gene Expression in *Escherichia coli*, **240**, 20–27.

Ribosome biogenesis
The *DIM1* Gene Responsible for the Conserved $m^6{}_2Am^6{}_2A$ Dimethylation in the 3′-Terminal Loop of 18 S rRNA is Essential in Yeast, **241**, 492–497.

Ribosome inactivating protein
Crystallization and Preliminary Crystallographic Study of β-Momorcharin, **238**, 284–285.
Crystallization and Preliminary X-ray Analysis of GAP 31. A Protein Which Inhibits the Life Cycle of HIV-1, **240**, 92–94.
X-ray Structure of Recombinant Ricin A-Chain at 1·8 Å Resolution, **244**, 410–422.

Ribosome structure
Structural Model of the 50 S Subunit of *Escherichia coli* Ribosomes from Solution Scattering. I. X-ray Synchrotron Radiation Study, **240**, 66–77.
Structural Model of the 50 S Subunit of *Escherichia coli* Ribosomes from Solution Scattering. II. Neutron Scattering Study, **240**, 78–86.
Conformation of the Central, Three-helix Junction of the 5 S Ribosomal RNA of *Sulfolobus acidocaldarius*, **241**, 415–430.

Ribosomes
Specialized Ribosomes Allow for the Study of Mutations in Functionally Important Regions in 16 S rRNA, without Affecting Cell Growth. The Identification of Functional Regions in the Central Domain of 16 S rRNA, **237**, 368–377.

Ribozyme
In Vitro Genetic Analysis of the Hinge Region Between Helical Elements P5-P4-P6 and P7-P3-P8 in the *sunY* Group I Self-splicing Intron, **235**, 140–155.
GAAA Tetraloop and Conserved Bulge Stabilize Tertiary Structure of a Group I Intron Domain, **236**, 49–63.
Visualization of a Tertiary Structural Domain of the *Tetrahymena* Group I Intron by Electron Microscopy, **236**, 64–71.
Multiple Folded Conformations of a Hammerhead Ribozyme Domain under Cleavage Conditions, **239**, 366–370.
Amino Acid Requirements of the Nucleocapsid Protein of HIV-1 for Increasing Catalytic Activity of a Ki-ras Ribozyme *in Vitro*, **242**, 422–429.
Interaction Between Tumour Necrosis Factor α Ribozyme and Cellular Proteins. Involvement in Ribozyme Stability and Activity, **242**, 619–629.
Excess Counterion Accumulation around Branched Nucleic Acids, **243**, 919–929.

Ribozyne
Structure-mapping of the Hairpin Ribozyme. Magnesium-dependent Folding and Evidence for Tertiary Interactions within the Ribozyme-Substrate Complex, **244**, 52–63.

Ricin
X-ray Structure of Recombinant Ricin A-Chain at 1·8 Å Resolution, **244**, 410–422.

RING1
Structure of the C_3HC_4 Domain by ^{1}H-nuclear Magnetic Resonance Spectroscopy. A New Structural Class of Zinc-finger, **237**, 201–211.

RNA
See also Catalytic RNA.
Expression of Mitochondrial Genes in the Germinating Conidia of *Neurospora crassa*, **235**, 881–897.

A Quantitative Model of the *Escherichia coli* 16 S RNA in the 30 S Ribosomal Subunit, **240**, 308–340.
Preparation, Characterization and Crystallization of an Antibody Fab Fragment that Recognizes RNA. Crystal Structures of Native Fab and Three Fab-mononucleotide Complexes, **243**, 283–297.
Identification of Recognition Elements on Bacteriophage Qβ Minus Strand RNA that are Essential for Template Activity with Qβ Replicase, **243**, 811–815.
The Processive Reaction Mechanism of Ribonuclease II, **243**, 930–943.
Fungal Virus Capsids are Cytoplasmic Compartments for the Replication of Double-stranded RNA Formed as Icosahedral Shells of Asymmetric Gag Dimers, **244**, 255–258.

16S RNA
Selective Perturbation of G530 of 16 S rRNA by Translational Miscoding Agents and a Streptomycin-dependence Mutation in Protein S12, **235**, 156–172.
Mutational and Structural Analysis of the RNA Binding Site for *Escherichia coli* Ribosomal Protein S7, **244**, 74–85.

RNA binding proteins
A Molecular Rheostat. Co-operative Rev Binding to Stem I of the Rev-response Element Modulates Human Immunodeficiency Virus Type-1 Late Gene Expression, **241**, 193–207.

RNA catalysis
GAAA Tetraloop and Conserved Bulge Stabilize Tertiary Structure of a Group I Intron Domain, **236**, 49–63.

RNA chain elongation
Analysis of RNA Chain Elongation and Termination by *Saccharomyces cerevisiae* RNA Polymerase III, **235**, 1173–1192.
Encounters of *Saccharomyces cerevisiae* RNA Polymerase III with its Transcription Factors during RNA Chain Elongation, **235**, 1193–1205.

RNA folding
Automatic Identification of Group I Intron Cores in Genomic DNA Sequences, **235**, 1206–1217.
Thermodynamics of RNA Folding in a Conserved Ribosomal RNA Domain, **237**, 560–576.

RNA function
tRNA Structure and Ribosomal Function. I. tRNA Nucleotide 27-43 Mutations Enhance First Position Wobble, **235**, 1381–1394.
tRNA Structure and Ribosomal Function. II. Interaction Between Anticodon Helix and other tRNA Mutations, **235**, 1395–1405.

RNA hybrid
The Solution Structure of the r(gcg)d(TATACCC):d(GGGTATACGC) Okazaki Fragment Contains Two Distinct Duplex Morphologies Connected by a Junction, **241**, 440–455.

RNA ligand
Characterization of an *in Vitro*-selected RNA Ligand to the HIV-1 Rev Protein, **235**, 237–247.

RNA modelling
Involvement of a GNRA Tetraloop in Long-range RNA Tertiary Interactions, **236**, 1271–1276.

RNA polymerase
See also RNA-dependent RNA polymerase.
Role of the Sigma^{70} Subunit of *Escherichia coli* RNA Polymerase in Transcription Activation, **235**, 405–413.
Factor Independent Activation of *rrnB* P1. An "Extended" Promoter with an Upstream Element that Dramatically Increases Promoter Strength, **235**, 1421–1435.
A Promoter Melting Region in the Primary σ Factor of *Bacillus subtilis*. Identification of Functionally Important Aromatic Amino Acids, **235**, 1470–1488.
Probing the Informational Content of *Escherichia coli* σ^{70} Region 2.3 by Combinatorial Cassette Mutagenesis, **235**, 1489–1500.
An *Escherichia coli* RNA Polymerase Defective in Transcription due to its Overproduction of Abortive Initiation Products, **236**, 72–80.
High Concentrations of ppGpp Decrease the RNA Chain Growth Rate. Implications for Protein Synthesis and Translational Fidelity During Amino Acid Starvation in *Escherichia coli*, **236**, 441–454.
Asymmetric Arrangement of Two Alpha Subunits within *Escherichia coli* RNA Polymerase. Involvement of One Alpha Subunit in Contact with cAMP Receptor Protein, **236**, 1283–1288.
The δ Subunit of *Bacillus subtilis* RNA Polymerase. An Allosteric Effector of the Initiation and Core-recycling Phases of Transcription, **239**, 1–14.
Lambda *cI* Repressor Mutants Altered in Transcriptional Activation, **242**, 23–36.
Functional Map of the Alpha Subunit of *Escherichia coli* RNA Polymerase. Deletion Analysis of the Amino-terminal Assembly Domain, **242**, 107–115.
The Complex of DNA Gyrase and Quinolone Drugs with DNA Forms a Barrier to Transcription by RNA Polymerase, **242**, 351–363.
Sporulation Regulatory Protein SpoIIID from *Bacillus subtilis* Activates and Represses Transcription by Both Mother-cell-specific Forms of RNA Polymerase, **243**, 425–436.
OmpR Mutants Specifically Defective for Transcriptional Activation, **243**, 579–594.
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP) I. Saturation and Alanine-scanning Mutagenesis, **243**, 595–602.
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP). II. Role at Class I and Class II CAP-dependent Promoters, **243**, 603–610.
The Thumb's Knuckle. Flexibility in the Thumb Subdomain of T7 RNA Polymerase is Revealed by the Structure of a Chimeric T7/T3 RNA Polymerase, **244**, 6–12.
Stability of *Escherichia coli* Transcription Complexes Near an Intrinsic Terminator, **244**, 36–51.
RNA Chain Elongation and Termination by Mammalian RNA Polymerase III. Analysis of tRNA Gene Transcription by Imposing a Reversible Factor-mediated Block to Elongation using a Sequence-specific DNA Binding Protein, **244**, 482–493.

RNA polymerase II
A DNA Minor Groove-binding Ligand Both Potentiates and Arrests Transcription by RNA Polymerase II. Elongation Factor SII Enables Readthrough at Arrest Sites, **236**, 725–737.
Molecular Modeling of RNA Polymerase II Mutations onto DNA Polymerase I, **244**, 13–22.

RNA polymerase III
Analysis of RNA Chain Elongation and Termination by *Saccharomyces cerevisiae* RNA Polymerase III, **235**, 1173–1192.
Encounters of *Saccharomyces cerevisiae* RNA Polymerase III with its Transcription Factors during RNA Chain Elongation, **235**, 1193–1205.
Suppression of Yeast RNA Polymerase III Mutations by the *URP2* Gene Encoding a Protein Homologous to the Mammalian Ribosomal Protein S20, **240**, 1–7.

RNA processing
Intragenic Processing in Yeast rRNA is Dependent on the 3′ External Transcribed Spacer, **239**, 170–180.
Conformation of the Central, Three-helix Junction of the 5 S Ribosomal RNA of *Sulfolobus acidocaldarius*, **241**, 415–430.

RNA pseudoknots
Thermodynamics of Folding a Pseudoknotted mRNA Fragment, **241**, 246–262.

RNA replication
Requirement of 3′-Terminal Guanosine in (−)-Stranded RNA for *in vitro* Replication of Cucumber Mosaic Virus Satellite RNA by Viral RNA-dependent RNA Polymerase, **238**, 655–657.

RNA splicing
GAAA Tetraloop and Conserved Bulge Stabilize Tertiary Structure of a Group I Intron Domain, **236**, 49–63.
Peptide Antibiotics of the Tuberactinomycin Family as Inhibitors of Group I Intron RNA Splicing, **236**, 1001–1010.

RNA stability
Thermodynamics of RNA Folding in a Conserved Ribosomal RNA Domain, **237**, 560–576.

RNA structure
Translational Initiation on Structured Messengers. Another Role for the Shine-Dalgarno Interaction, **235**, 173–184.
tRNA Structure and Ribosomal Function. I. tRNA Nucleotide 27-43 Mutations Enhance First Position Wobble, **235**, 1381–1394.
tRNA Structure and Ribosomal Function. II. Interaction Between Anticodon Helix and other tRNA Mutations, **235**, 1395–1405.
Involvement of a GNRA Tetraloop in Long-range RNA Tertiary Interactions, **236**, 1271–1276.
Structural Study of the 5′ End of a Synthetic Premessenger RNA from Adenovirus. Evidence for a Long-range Exon-Intron Interaction, **240**, 205–225.
A Molecular Rheostat. Co-operative Rev Binding to Stem I of the Rev-response Element Modulates Human Immunodeficiency Virus Type-1 Late Gene Expression, **241**, 193–207.
Conformation of the Central, Three-helix Junction of the 5 S Ribosomal RNA of *Sulfolobus acidocaldarius*, **241**, 415–430.
Excess Counterion Accumulation around Branched Nucleic Acids, **243**, 919–929.
Structure-mapping of the Hairpin Ribozyme. Magnesium-dependent Folding and Evidence for Tertiary Interactions within the Ribozyme-Substrate Complex, **244**, 52–63.

RNA structure prediction
Control of Translation by mRNA Secondary Structure in *Escherichia coli*. A Quantitative Analysis of Literature Data, **244**, 144–150.

RNA synthesis
Functional Map of the Alpha Subunit of *Escherichia coli* RNA Polymerase. Deletion Analysis of the Amino-terminal Assembly Domain, **242**, 107–115.

RNA tertiary structure
Visualization of a Tertiary Structural Domain of the *Tetrahymena* Group I Intron by Electron Microscopy, **236**, 64–71.
Involvement of a GNRA Tetraloop in Long-range RNA Tertiary Interactions, **236**, 1271–1276.
Thermodynamics of RNA Folding in a Conserved Ribosomal RNA Domain, **237**, 560–576.
Stabilization of RNA Structure by Mg Ions. Specific and Non-specific Effects, **237**, 577–587.
Thermodynamics of Folding a Pseudoknotted mRNA Fragment, **241**, 246–262.
In Vitro Selection of Small RNAs that Bind to *Escherichia coli* Phenylalanyl-tRNA Synthetase, **242**, 186–192.

RNA viruses
The Refined Three-Dimensional Structure of an Insect Virus at 2·8 Å Resolution, **235**, 565–586.

RNA-binding proteins
Heterocyst-forming Filamentous Cyanobacteria Encode Proteins that Resemble Eukaryotic RNA-binding Proteins of the RNP Family, **235**, 1162–1170.
11-fold Symmetry of the *trp* RNA-binding Attenuation Protein (TRAP) from *Bacillus subtilis* Determined by X-ray Analysis, **244**, 1–5.

RNA-dependent RNA polymerase
Requirement of 3′-Terminal Guanosine in (−)-Stranded RNA for *in vitro* Replication of Cucumber Mosaic Virus Satellite RNA by Viral RNA-dependent RNA Polymerase, **238**, 655–657.

RNA-mediated transposition
Transposable Group II Introns in Fission and Budding Yeast. Site-specific Genomic Instabilities and Formation of Group II IVS plDNAs, **243**, 157–166.

RNA-protein Interaction
A Quaternary Transcription Termination Complex. Reciprocal Stabilization by Rho Factor and NusG Protein, **243**, 830–839.

RNA-protein interaction, *see* Protein-RNA interaction

RNase P
Characterization of the *Borrelia burgdorferi* RNase P RNA Gene Reveals a Novel Tertiary Interaction, **241**, 1–6.
Cleavage Site Selection by M1 RNA, the Catalytic Subunit of *Escherichia coli* RNase P, is influenced by pH, **244**, 511–521.

Rolling circle modes
Multiple DNA Conformational Changes Induced by an Initiator Protein Precede the Nicking Reaction in a Rolling Circle Replication Origin, **237**, 388–400.

Rop
Linking an Easily Detectable Phenotype to the Folding of a Common Structural Motif. Selection of Rare Turn Mutations that Prevent the Folding of Rop, **237**, 378–387.

Rotamer
Ligand Docking to Proteins With Discrete Side-chain Flexibility, **235**, 345–356.
Conformational Analysis of Carboxylate and Carboxamide Side-chains Bound to Cations, **239**, 306–314.

Rotation function
Crystallization and Molecular Packing Analysis of Barstar Crystals, **243**, 533–536.
The Molecular Replacement Solution and X-ray Refinement to 2·8 Å of a Decameric Complex of Human Cyclophilin A with the Immunosuppressive Drug Cyclosporin A, **244**, 385–409.

Rotational diffusion
The Structure of the RNA Polymerase-Promoter Complex. DNA-bending-angle by Quantitative Electrooptics, **236**, 1–6.
Translational and Rotational Diffusion of Proteins, **236**, 629–636.

RRE
Characterization of an *in Vitro*-selected RNA Ligand to the HIV-1 Rev Protein, **235**, 237–247.

R-recombinase
Use of an Inducible Site-specific Recombinase to Probe the Structure of Protein–DNA Complexes Involved in F Plasmid Partition in *Escherichia coli*, **236**, 679–684.

rRNA
Mutations in 23 S Ribosomal RNA Perturb Transfer RNA Selection and can Lead to Streptomycin Dependence, **235**, 813–824.
Visualization of Protein–Nucleic Acid Interactions Involved in the *in Vitro* Assembly of the *Escherichia coli* 50 S Ribosomal Subunit, **235**, 1239–1250.
Factor Independent Activation of *rrnB* P1. An "Extended" Promoter with an Upstream Element that Dramatically Increases Promoter Strength, **235**, 1421–1435.
Intragenic Processing in Yeast rRNA is Dependent on the 3′ External Transcribed Spacer, **239**, 170–180.
The Ribosomal RNA Gene Region in *Acanthamoeba castellanii* Mitochondrial DNA. A Case of Evolutionary Transfer of Introns between Mitochondria and Plastids?, **239**, 476–499.
Suppression of Yeast RNA Polymerase III Mutations by the *URP2* Gene Encoding a Protein Homologous to the Mammalian Ribosomal Protein S20, **240**, 1–7.

Comparative Structure and Genomic Organization of the Discontinuous Mitochondrial Ribosomal RNA Genes of *Chlamydomonas eugametos* and *Chlamydomonas reinhardtii*, **241**, 298–311.

A Major Family of Motifs Involving G·A Mismatches in Ribosomal RNA, **242**, 1–8.

Isolated P2 rRNA Promoters of *Escherichia coli* are Strong Promoters that are Subject to Stringent Control, **243**, 152–156.

Mutations in Helix 34 of *Escherichia coli* 16 S Ribosomal RNA Have Multiple Effects on Ribosome Function and Synthesis, **243**, 402–412.

Structural Characteristics of the Stable RNA Introns of Archaeal Hyperthermophiles and their Splicing Junctions, **243**, 846–855.

16S rRNA

Specialized Ribosomes Allow for the Study of Mutations in Functionally Important Regions in 16 S rRNA, without Affecting Cell Growth. The Identification of Functional Regions in the Central Domain of 16 S rRNA, **237**, 368–377.

A Quantitative Model of the *Escherichia coli* 16 S RNA in the 30 S Ribosomal Subunit, **240**, 308–340.

18S rRNA

The *DIM1* Gene Responsible for the Conserved $m^6{}_2Am^6{}_2A$ Dimethylation in the 3′-Terminal Loop of 18 S rRNA is Essential in Yeast, **241**, 492–497.

23 S rRNA

Cross-hypersensitivity Effects of Mutations in 23 S rRNA Yield Insight into Aminoacyl-tRNA Binding, **244**, 151–157.

5·8S rRNA

A Chloroplast Group I Intron Undergoes the First Step of Reverse Splicing into Host Cytoplasmic 5·8 S rRNA. Implications for Intron-mediated RNA Recombination, Intron Transposition and 5·8 S rRNA Structure, **236**, 455–468.

RT RNase H

The Solution Structure of the r(gcg)d(TATACCC):d(GGGTATACGC) Okazaki Fragment Contains Two Distinct Duplex Morphologies Connected by a Junction, **241**, 440–455.

RT6 genes

Premature Stop Codons Inactivate the RT6 Genes of the Human and Chimpanzee Species, **243**, 537–546.

RTP, *see* Replication terminus

Rusticyanin

Nuclear Magnetic Resonance ^{15}N and ^{1}H Resonance Assignments and Global Fold of Rusticyanin. Insights into the Ligation and Acid Stability of the Blue Copper Site, **244**, 370–384.

RuvB protein

Hexameric Rings of *Escherichia coli* RuvB Protein: Cooperative Assembly, Processivity and ATPase Activity, **243**, 208–215.

RXR

BmCF1, a *Bombyx mori* RXR-type Receptor Related to the *Drosophila ultraspiracle*, **238**, 479–486.

S10

Bacteriophage Lambda N-Dependent Transcription Antitermination. Competition for an RNA Site May Regulate Antitermination, **236**, 217–228.

Saccharomyces cerevisiae

OXA1, a *Saccharomyces cerevisiae* Nuclear Gene whose Sequence is Conserved from Prokaryotes to Eukaryotes Controls Cytochrome Oxidase Biogenesis, **239**, 201–212.

Suppression of Yeast RNA Polymerase III Mutations by the *URP2* Gene Encoding a Protein Homologous to the Mammalian Ribosomal Protein S20, **240**, 1–7.

Mutational Analysis of the C-Terminal Region of *Saccharomyces cerevisiae* Ribosomal Protein L25 *in Vitro* and *in Vivo* Demonstrates the Presence of Two Distinct Functional Elements, **240**, 243–255.

A Voltage-gated Chloride Channel in the Yeast *Saccharomyces cerevisiae*, **242**, 595–598.

Unwound Regions in Yeast Centromere IV DNA, **243**, 179–189.

Salmonella typhimurium

Domain Structures of the MS Ring Component Protein (FliF) of the Flagellar Basal Body of *Salmonella typhimurium*, **236**, 546–555.

Salmonid

Tc1 Transposon-like Sequences are Widely Distributed in Salmonids, **241**, 26–34.

Amplification of Distinct Subfamilies of Short Interspersed Elements During Evolution of the Salmonidae, **241**, 633–644.

Salt

Linkage of pH, Anion and Cation Effects in Protein-Nucleic Acid Equilibria. *Escherichia coli* SSB Protein-Single Stranded Nucleic Acid Interactions, **236**, 165–178.

Salt Effects on Ligand–DNA Binding. Minor Groove Binding Antibiotics, **238**, 245–263.

Salt Effects on Protein–DNA Interactions. The λcI Repressor and *Eco*RI Endonuclease, **238**, 264–280.

Satellite RNA

Requirement of 3′-Terminal Guanosine in (−)-Stranded RNA for *in vitro* Replication of Cucumber Mosaic Virus Satellite RNA by Viral RNA-dependent RNA Polymerase, **238**, 655–657.

Satellite virus

Characterization of Crystals of Satellite Panicum Mosaic Virus, **238**, 849–851.

SAV

SAV, an Archaebacterial Gene with Extensive Homology to a Family of Highly Conserved Eukaryotic ATPases, **235**, 396–401.

Savinase™

Cavity Mutants of Savinase™. Crystal Structures and Differential Scanning Calorimetry Experiments Give Hints of the Function of the Buried Water Molecules in Subtilisins, **242**, 193–202.

scFv

Selection of Phage-displayed Antibodies Specific for a Cytoskeletal Antigen by Competitive Elution with a Monoclonal Antibody, **244**, 353–360.

Score statistics

Sequence Alignment and Penalty Choice. Review of Concepts, Case Studies and Implications, **235**, 1–12.

Scorpion toxin

Crystal Structure of Toxin II from the Scorpion *Androctonus australis* Hector Refined at 1·3 Å Resolution, **238**, 88–103.

Scrambled genes

Comparative Structure and Genomic Organization of the Discontinuous Mitochondrial Ribosomal RNA Genes of *Chlamydomonas eugametos* and *Chlamydomonas reinhardtii*, **241**, 298–311.

Sedimentation equilibrium

Ligand-induced Self-association of the *Escherichia coli* Regulatory Protein TyrR, **238**, 309–318.

***see also* Bacterial conjugation**

DNA Rearrangement of the Shufflon Determines Recipient Specificity in Liquid Mating of IncI1 Plasmid R64, **243**, 6–9.

***see also* Drug design**

***see also* Protein folding**

***see* Bacteriophage lambda**

Seed storage protein

Structure of Phaseolin at 2·2 Å Resolution. Implications for a Common Vicilin/Legumin Structure and the Genetic Engineering of Seed Storage Proteins, **238**, 748–776.

Seeding
Purification and Crystallization of the Endoglycosidase PNGase F, a Peptide:*N*-glycosidase from *Flavobacterium meningosepticum*, **241**, 624–626.

Selenomethionine
Two-dimensional NMR Studies of Selenomethionyl Calmodulin, **239**, 545–554.
Crystallization and Preliminary X-ray Diffraction Characterisation of both a Native and Selenomethionyl VLA-4 Binding Fragment of VCAM-1, **244**, 464–468.

SELEX
Characterization of an *in Vitro*-selected RNA Ligand to the HIV-1 Rev Protein, **235**, 237–247.

Self-assembled monolayers
Structure Characterization of Membrane Bound and Surface Adsorbed Protein, **237**, 1–4.

Self-association
Ligand-induced Self-association of the *Escherichia coli* Regulatory Protein TyrR, **238**, 309–318.

Self-consistent ensemble optimization
Predicting Protein Mutant Energetics by Self-consistent Ensemble Optimization, **236**, 918–939.

Self-rotation function
Crystallization and Quaternary Structure Analysis of the NAD^+-dependent Leucine Dehydrogenase from *Bacillus sphaericus*, **236**, 663–665.

Semliki Forest Virus
The Organization of the Spike Complex of Semliki Forest Virus, **236**, 572–583.

Senescence
Increased Longevity of EF-1α High-fidelity Mutants in *Podospora anserina*, **235**, 231–236.

Sequence analogy
A Voltage-gated Chloride Channel in the Yeast *Saccharomyces cerevisiae*, **242**, 595–598.

Sequence analysis
See also Protein structure analysis.
Crystal Structure of a Peptide Complex of Anti-influenza Peptide Antibody Fab 26/9. Comparison of Two Different Antibodies Bound to the Same Peptide Antigen, **241**, 534–556.
Fibritin Encoded by Bacteriophage T4 Gene wac has a Parallel Triple-stranded α-Helical Coiled-coil Structure, **242**, 470–486.

Sequence bias
Evidence that GHN Phase Bias does not Constitute a Framing Code, **235**, 389–395.

Sequence comparison
See also Protein structure.
Detecting Patterns in Protein Sequences, **239**, 698–712.

Sequence context
Pyrimidine Ring Fragmentation Products. Effects of Lesion Structure and Sequence Context on Mutagenesis, **236**, 514–530.

Sequence dependence
Sequence Dependence of DNA Structure in Solution, **235**, 325–330.

Sequence homology, *see* Homologous sequence

Sequence specificity
Conformational Drug Determinants of the Sequence Specificity of Drug-stimulated Topoisomerase II DNA Cleavage, **235**, 1218–1230.
Characterization of Preferred Deoxyribonuclease I Cleavage Sites, **236**, 405–411.

Sequence weighting
Position-based Sequence Weights, **243**, 574–578.

Sequence-dependent hydration
Comparative Studies of High Resolution *Z*-DNA Crystal Structures. Part 1: Common Hydration Patterns of Alternating dC-dG, **236**, 1154–1168.

Serine hydrolases
(His)C^{ε}-H···O=C< Hydrogen Bond in the Active Sites of Serine Hydrolases, **241**, 83–93.

Serine protease
Preliminary Crystallographic Studies on Human Complement Pro-factor D, **235**, 1144–1146.
A Graph-theoretic Approach to the Identification of Three-dimensional Patterns of Amino Acid Side-chains in Protein Structures, **243**, 327–344.

Serine proteinase
Crystallization and Preliminary Crystallographic Analysis of Sfericase. A *Bacillus sphaericus* Calcium-Dependent Serine Proteinase, **235**, 760–762.
A Crystallographic Re-investigation into the Structure of *Streptomyces griseus* Proteinase A Reveals an Acyl-enzyme Intermediate, **241**, 574–587.

Serine proteinase inhibitor
The Three-dimensional Solution Structure by ^1H NMR of a 6-kDa Proteinase Inhibitor Isolated from the Stigma of *Nicotiana alata*, **242**, 231–243.

Serratia marcescens
Crystal Structure of the 50 kDa Metallo Protease from *Serratia marcescens*, **242**, 244–251.

Sexual cycle
Increased Longevity of EF-1α High-fidelity Mutants in *Podospora anserina*, **235**, 231–236.

Sfericase
Crystallization and Preliminary Crystallographic Analysis of Sfericase. A *Bacillus sphaericus* Calcium-Dependent Serine Proteinase, **235**, 760–762.

Shape complementarity
PUZZLE: A New Method for Automated Protein Docking Based on Surface Shape Complementarity, **235**, 1021–1031.

Sheared G·A pairs
The Unusual Structure of the Human Centromere $(GGA)_2$ Motif. Unpaired Guanosine Residues Stacked Between Sheared G·A Pairs, **244**, 259–268.

Shikimate pathway
The Monofunctional Chorismate Mutase from *Bacillus subtilis*. Structure Determination of Chorismate Mutase and Its Complexes with a Transition State Analog and Prephenate, and Implications for the Mechanism of the Enzymatic Reaction, **240**, 476–500.
Crystallization of a Type II Dehydrogenase from *Mycobacterium tuberculosis*, **241**, 488–491.

Shine-Dalgarno sequence
Translational Initiation on Structured Messengers. Another Role for the Shine-Dalgarno Interaction, **235**, 173–184.
The Influence of Adenine-rich Motifs in the 3′ Portion of the Ribosome Binding Site on Human IFN-γ Gene Expression in *Escherichia coli*, **240**, 20–27.

Short Interspersed Repetitive Elements (SINEs)
A Novel tRNA Species as an Origin of Short Interspersed Repetitive Elements (SINEs). Equine SINEs May Have Originated From $tRNA^{Ser}$, **239**, 731–735.
Generality of the tRNA Origin of Short Interspersed Repetitive Elements (SINEs). Characterization of Three Different tRNA-derived Retroposons in the Octopus, **243**, 25–37.

Shufflon
DNA Rearrangement of the Shufflon Determines Recipient Specificity in Liquid Mating of IncI1 Plasmid R64, **243**, 6–9.

Shuttle vector
Proximal and Distal Effects of Sequence Context on Ultraviolet Mutational Hotspots in a Shuttle Vector Replicated in Xeroderma Cells, **236**, 491–502.

Sickle cell
Measurement of the Hemoglobin Concentration in Deoxhemoglobin S Polymers and Characterization of the Polymer Water Compartment, **244**, 100–109.

Side-chain conformation
Determination of α-Helix Propensity within the Context of a Folded Protein. Sites 44 and 131 in Bacteriophage T4 lysozyme, **235**, 600–624.

Prediction of the Positioning of the Seven Transmembrane α-helices of Bacteriorhodopsin. A Molecular Simulation Study, **236**, 1105–1122.
Conformational Analysis of Carboxylate and Carboxamide Side-chains Bound to Cations, **239**, 306–314.
A Graph-theoretic Approach to the Identification of Three-dimensional Patterns of Amino Acid Side-chains in Protein Structures, **243**, 327–344.

Side-chain interactions
Planar Stacking Interactions of Arginine and Aromatic Side-Chains in Proteins, **235**, 709–717.
Measuring Residue Associations in Protein Structures. Possible Implications for Protein Folding, **239**, 227–248.
Helix-stabilizing Interaction Between Tyrosine and Leucine or Valine when the Spacing is $i,i+4$, **241**, 706–713.

Side-chain packing
Predicting Protein Mutant Energetics by Self-consistent Ensemble Optimization, **236**, 918–939.

Side-chain prediction
Application of a Self-consistent Mean Field Theory to Predict Protein Side-chains Conformation and Estimate Their Conformational Entropy, **239**, 249–275.

Side-chain rotamers
Prediction of Protein Side-chain Conformations from Local Three-dimensional Homology Relationships, **235**, 1088–1097.

Siderophore
The Organization of Intercistronic Regions of the Aerobactin Operon of pColV-K30 may Account for the Differential Expression of the *iucABCD iutA* Genes, **238**, 288–293.

Sigma 54
The Domain Structure of Sigma 54 as Determined by Analysis of a Set of Deletion Mutants, **236**, 81–90.
Analysis of the N-Terminal Leucine Heptad and Hexad Repeats of Sigma 54, **239**, 15–24.
Interactions of Wild-type and Truncated LevR of *Bacillus subtilis* with the Upstream Activating Sequence of the Levanase Operon, **241**, 178–192.

Sigma factor
Probing the Informational Content of *Escherichia coli* σ^{70} Region 2.3 by Combinatorial Cassette Mutagenesis, **235**, 1489–1500.
The δ Subunit of *Bacillus subtilis* RNA Polymerase. An Allosteric Effector of the Initiation and Core-recycling Phases of Transcription, **239**, 1–14.

Sigma factor σ^{E}
The *Bacillus subtilis spoVD* Gene Encodes a Mother-cell-specific Penicillin-binding Protein Required for Spore Morphogenesis, **235**, 209–220.

Sigma subunit
Role of the Sigma^{70} Subunit of *Escherichia coli* RNA Polymerase in Transcription Activation, **235**, 405–413.

Signal peptide
New Alignment Strategy for Transmembrane Proteins, **243**, 388–396.

Signal sequence
Thermodynamic Partitioning Model for Hydrophobic Binding of Polypeptides by GroEL. II. GroEL Recognizes Thermally Unfolded Mature β-lactamase, **242**, 165–174.

Signal transduction
Co-crystallization of the Catalytic Subunit of the Serine/Threonine Specific Protein Phosphatase 1 from Human in Complex with Microcystin LR, **235**, 763–766.
Identification, Molecular Cloning, Expression and Chromosome Mapping of a Family of Transformation Upregulated hnRNP-K Proteins Derived by Alternative Splicing, **236**, 33–48.
Aspects of Receptor Binding and Signalling of Interleukin-4 Investigated by Site-Directed Mutagenesis and NMR Spectroscopy, **237**, 423–436.
Magnesium Binding to the Bacterial Chemotaxis Protein CheY Results in Large Conformational Changes Involving its Functional Surface, **238**, 489–495.
Crystallization and Preliminary Crystallographic Studies of Giα1 and Mutants of Giα1 in the GTP and GDP-bound States, **238**, 630–634.
OmpR Mutants Specifically Defective for Transcriptional Activation, **243**, 579–594.

Simean virus 40
Periodicity of Dinucleotides in Nucleosomes Derived from Simian Virus 40 Chromatin, **235**, 198–208.

Simian immunodeficiency virus (SIV)
Alternative Native Flap Conformation Revealed by 2·3 Å Resolution Structure of SIV Proteinase, **239**, 97–103.
Crystallization and Preliminary X-ray Investigation of Recombinant Simian Immunodeficiency Virus Matrix Protein, **241**, 744–746.

Simian virus 40
DNA Helical Instability Facilitates Initiation at the SV40 Replication Origin, **235**, 496–507.
Dynamics of the Nucleoprotein Structure of Simian Virus 40 Regulatory Region During Viral Development, **238**, 501–513.

Simulated annealing
The Solution Structure of the Tyr41→His Mutant of the Single-stranded DNA Binding Protein Encoded by Gene V of the Filamentous Bacteriophage M13, **236**, 229–246.
An Assessment of the Precision and Accuracy of Protein Structures Determined by NMR. Dependence on Distance Errors, **239**, 601–607.
A Model of the Complex between Single-stranded DNA and the Single-stranded DNA Binding Protein Encoded by Gene V of Filamentous Bacteriophage M13, **240**, 341–357.
Protein Three-dimensional Structure Determination and Sequence-specific Assignment of ^{13}C and ^{15}N-separated NOE Data. A Novel Real-space *ab initio* Approach, **243**, 696–718.

Simulation
Backbone Flexibility and Stability of Reverse Turn Conformation in a Model System, **235**, 682–694.

Single crystal microspectrophotometry
On the Photochemical Release of Phosphate from 3,5-Dinitrophenyl Phosphate in a Protein Crystal, **236**, 995–1000.

Single-stranded DNA
Unwound Regions in Yeast Centromere IV DNA, **243**, 179–189.

Single-stranded DNA-binding protein
A Model of the Complex between Single-stranded DNA and the Single-stranded DNA Binding Protein Encoded by Gene V of Filamentous Bacteriophage M13, **240**, 341–357.
Crystallization and Low Temperature Diffraction Studies of the DNA Binding Domain of the Single-stranded DNA Binding Protein from *Escherichia coli*, **240**, 396–399.

Single-stranded vector
Coding Properties of a Unique Apurinic/Apyrimidinic Site Replicated in Mammalian Cells, **240**, 416–420.

Site-directed mutagenesis
Analysis of Functional Domains of the Packaging Proteins of Bacteriophage T3 by Site-directed Mutagenesis, **235**, 248–259.
Predicting Protein Mutant Energetics by Self-consistent Ensemble Optimization, **236**, 918–939.
Bacteriophage T7 RNA Polymerase and Its Active-site Mutants. Kinetic, Spectroscopic and Calorimetric Characterization, **237**, 5–19.
Functional Characterization of Residues in the P-loop Motif of the RecA Protein ATP Binding Site, **237**, 20–34.

Solvent Rearrangement in an Antigen–Antibody Interface Introduced by Site-directed Mutagenesis of the Antibody Combining Site, **238**, 496–500.
Purification, Crystallization and Preliminary X-ray Analysis of Murine Interleukin-5, **241**, 269–272.
Crystallization and Preliminary X-ray Analysis of Wild-type and K272A Mutant Glutamate 1-Semialdehyde Aminotransferase from *Synechococcus*, **242**, 591–594.
Crystal Structure of the Mutant D52S Hen Egg White Lysozyme with an Oligosaccharide Product, **243**, 856–872.
Mutational and Structural Analysis of the RNA Binding Site for *Escherichia coli* Ribosomal Protein S7, **244**, 74–85.

Site-specific rearrangements of mtDNA
Transposable Group II Introns in Fission and Budding Yeast. Site-specific Genomic Instabilities and Formation of Group II IVS p1DNAs, **243**, 157–166.

Site-specific recombination
The Linkage Change of a Knotting Reaction Catalysed by Tn*3* Resolvase, **239**, 25–36.

Snake venom
X-ray Structure at 1·55 Å of Toxin γ, a Cardiotoxin from *Naja nigricollis* Venom. Crystal Packing Reveals a Model for Insertion into Membranes, **239**, 122–136.
Refined 2·0 Å X-ray Crystal Structure of the Snake Venom Zinc-endopeptidase Adamalysin II. Primary and Tertiary Structure Determination, Refinement, Molecular Structure and Comparison with Astacin, Collagenase and Thermolysin, **239**, 513–544.

snRNAs
Conserved Sequences in a Class of Rare Eukaryotic Nuclear Introns with Non-consensus Splice Sites, **239**, 357–365.

Soft-rot
Specific Interactions of *Erwinia chrysanthemi* KdgR Repressor with Different Operators of Genes Involved in Pectinolysis, **236**, 427–440.

Solubility
High Level Expression and Rational Mutagenesis of a Designed Protein, the Minibody. From an Insoluble to a Soluble Molecule, **236**, 649–659.

Solute-binding proteins
Crystallization and Preliminary X-ray Diffraction Study of the Nickel-binding Protein NikA of *Escherichia coli*, **243**, 353–355.

Solution scattering
Structural Model of the 50 S Subunit of *Escherichia coli* Ribosomes from Solution Scattering. I. X-ray Synchrotron Radiation Study, **240**, 66–77.
Structural Model of the 50 S Subunit of *Escherichia coli* Ribosomes from Solution Scattering. II. Neutron Scattering Study, **240**, 78–86.

Solution structure
An Assessment of the Precision and Accuracy of Protein Structures Determined by NMR. Dependence on Distance Errors, **239**, 601–607.
DNA Sequence GCGAATGAGC Containing the Human Centromere Core Sequence GAAT Forms a Self-complementary Duplex with Sheared G·A Pairs in Solution, **241**, 467–479.
Solution Structure of Turkey Ovomucoid Third Domain as Determined from Nuclear Magnetic Resonance Data, **242**, 203–214.
Solution Structure of the d(T-C-G-A) Duplex at Acidic pH. A Parallel-Stranded Helix Containing $C^+ \cdot C$, G·G and A·A Pairs, **242**, 508–526.
Three-dimensional Structure of a Type VI Turn in a Linear Peptide in Water Solution. Evidence for Stacking of Aromatic Rings as a Major Stabilizing Factor, **243**, 754–766.

Solvation
Protein Hydration Observed by X-ray Diffraction. Solvation Properties of Penicillopepsin and Neuraminidase Crystal Structures, **243**, 100–115.

Solvent accessibility
PUZZLE: A New Method for Automated Protein Docking Based on Surface Shape Complementarity, **235**, 1021–1031.
Use of Amino Acid Environment-dependent Substitution Tables and Conformational Propensities in Structure Prediction from Aligned Sequences of Homologous Proteins. I. Solvent Accessibility Classes, **238**, 682–692.

sopABC
Use of an Inducible Site-specific Recombinase to Probe the Structure of Protein–DNA Complexes Involved in F Plasmid Partition in *Escherichia coli*, **236**, 679–684.

SOS response
DNA Damage-inducible Replication of the *Escherichia coli* Chromosome is Initiated at Separable Sites within the Minimal *oriC*, **235**, 1459–1469.
Identification of High Affinity Binding Sites for LexA which Define New DNA Damage-inducible Genes in *Escherichia coli*, **241**, 507–523.
Induction of the SOS Response by IS*1* Transposase, **242**, 339–350.

Space group determination
Expression, Purification, Crystallization and Preliminary X-ray Analysis of Human Argininosuccinic Acid Lyase, **239**, 336–338.
Crystallization and Preliminary X-ray Analysis of a Mutant Duck δ II Crystallin, **243**, 944–946.

Spacers
Intragenic Processing in Yeast rRNA is Dependent on the 3′ External Transcribed Spacer, **239**, 170–180.
Genetic Studies of the *lac* Repressor. XIV. Analysis of 4000 Altered *Escherichia coli lac* Repressors Reveals Essential and Non-essential Residues, As Well As "Spacers" Which Do Not Require a Specific Sequence, **240**, 421–433.

Spacing changes
Cooperative DNA-Protein Interactions. Effects of Changing the Spacing Between Adjacent Binding Sites, **235**, 532–544.

Specialized ribosomes
Specialized Ribosomes Allow for the Study of Mutations in Functionally Important Regions in 16 S rRNA, without Affecting Cell Growth. The Identification of Functional Regions in the Central Domain of 16 S rRNA, **237**, 368–377.

Species specificity
Amplification of Distinct Subfamilies of Short Interspersed Elements During Evolution of the Salmonidae, **241**, 633–644.
Yeast TBP can Replace its Human Homologue in the RNA Polymerase I-specific Multisubunit Factor SL1, **243**, 840–845.

Spectrin
Conformation and Phasing of Dystrophin Structural Repeats, **235**, 1271–1277.

Spherical harmonics
Structural Model of the 50 S Subunit of *Escherichia coli* Ribosomes from Solution Scattering. I. X-ray Synchrotron Radiation Study, **240**, 66–77.
Structural Model of the 50 S Subunit of *Escherichia coli* Ribosomes from Solution Scattering. II. Neutron Scattering Study, **240**, 78–86.

Spin-label
The Orientation of Spin-probes Attached to Cys374 on Actin in Oriented Gels, **236**, 703–709.
Site-Directed Mutagenesis and ^{1}H Nuclear Magnetic Resonance of an Anti-Dinitrophenyl Spin Label Antibody, **244**, 301–318.

Splice sites
Conserved Sequences in a Class of Rare Eukaryotic Nuclear Introns with Non-consensus Splice Sites, **239**, 357–365.

Splicing
See also Alternative splicing; Reverse splicing.

Structural Study of the 5′ End of a Synthetic Premessenger RNA from Adenovirus. Evidence for a Long-range Exon-Intron Interaction, **240**, 205–225.

Splicing inhibitors
Peptide Antibiotics of the Tuberactinomycin Family as Inhibitors of Group I Intron RNA Splicing, **236**, 1001–1010.

Splicing junction
Structural Characteristics of the Stable RNA Introns of Archaeal Hyperthermophiles and their Splicing Junctions, **243**, 846–855.

Spore
Expression of Mitochondrial Genes in the Germinating Conidia of *Neurospora crassa*, **235**, 881–897.

Spore promoters
Regulation of the Transcription of a Cluster of *Bacillus subtilis* Spore Coat Genes, **240**, 405–415.

Sporulation
The *Bacillus subtilis spoVD* Gene Encodes a Mother-cell-specific Penicillin-binding Protein Required for Spore Morphogenesis, **235**, 209–220.
Sporulation Regulatory Protein SpoIIID from *Bacillus subtilis* Activates and Represses Transcription by Both Mother-cell-specific Forms of RNA Polymerase, **243**, 425–436.

Spot-scan imaging
Protein Subunit Structures in the Herpes Simplex Virus A-capsid Determined from 400 kV Spot-scan Electron Cryomicroscopy, **242**, 456–469.

Squalus acanthias
Carbamyl Phosphate Synthetase III, an Evolutionary Intermediate in the Transition Between Glutamine-dependent and Ammonia-dependent Carbamyl Phosphate Synthetases, **243**, 131–140.

SSB protein
Co-operative Binding of *Escherichia coli* SSB Tetramers to Single-stranded DNA in the $(SSB)_{35}$ Binding Mode, **236**, 106–123.
Linkage of pH, Anion and Cation Effects in Protein-Nucleic Acid Equilibria. *Escherichia coli* SSB Protein-Single Stranded Nucleic Acid Interactions, **236**, 165–178.
Complex Formation between Phage ϕ29 Single-stranded DNA Binding Protein and DNA, **239**, 213–226.

Stability
Prediction of pH-dependent Properties of Proteins, **238**, 415–436.
Erythrina caffra Trypsin Inhibitor Retains Its Native Structure and Function After Reducing Its Disulfide Bonds, **239**, 276–284.
Sequence Statistics Reliably Predict Stabilizing Mutations in a Protein Domain, **240**, 188–192.
Interaction Between Tumour Necrosis Factor α Ribozyme and Cellular Proteins. Involvement in Ribozyme Stability and Activity, **242**, 619–629.

Stabilization
Complete Nucleotide Sequence of Birmingham IncPα Plasmids. Compilation and Comparative Analysis, **239**, 623–663.

Stable-isotope labeling
Dynamical Structure of the Hinge Region of Immunoglobulin G as Studied by ^{13}C Nuclear Magnetic Resonance Spectroscopy, **236**, 300–309.

Stalk complex
ATP Synthase from Bovine Heart Mitochondria. *In Vitro* Assembly of a Stalk Complex in the Presence of F_1-ATPase and in its Absence, **242**, 408–421.

Stalling
Stalling of *Escherichia coli* RNA Polymerase in the +6 to +12 Region *in Vivo* is Associated with Tight Binding to Consensus Promoter Elements, **239**, 455–465.
Context-dependent Effects of Upstream A-Tracts. Stimulation or Inhibition of *Escherichia coli* Promoter Function, **239**, 466–475.

Staphylococcal nuclease
Evidence for Strained Interactions between Side-chains and the Polypeptide Backbone, **235**, 27–32.
Backbone Dynamics of a Highly Disordered 131 Residue Fragment of Staphylococcal Nuclease, **242**, 527–546.
Electrophoretic Characterization of the Denatured States of Staphylococcal Nuclease, **242**, 670–682.
Residual Structure in a Staphylococcal Nuclease Fragment. Is It a Molten Globule and is Its Unfolding a First-order Phase Transition?, **243**, 93–99.

Starch binding
Nucleotide Sequence and X-ray Structure of Cyclodextrin Glycosyltransferase from *Bacillus circulans* Strain 251 in a Maltose-dependent Crystal Form, **236**, 590–600.

Starting window
Starting Window, a Distinct Element in the Cap-independent Internal Initiation of Translation on Picornaviral RNA, **241**, 398–414.

Stationary phase mutagenesis
Single Base-Pair Deletions Induced by Bleomycin at Potential Double-strand Cleavage Sites in the *aprt* Gene of Stationary Phase Chinese Hamster Ovary D422 Cells, **243**, 216–226.

Statistical analysis
The Effect of Mathematics and Coordinate System on Comparability and "Dependencies" of Nucleic Acid Structure Parameters, **237**, 98–124.
Satisfying Hydrogen Bonding Potential in Proteins, **238**, 777–793.
Detecting Patterns in Protein Sequences, **239**, 698–712.

Steady-state kinetics
Molecular Recognition of the Identity-determinant Set of Isoleucine Transfer RNA from *Escherichia coli*, **236**, 710–724.
Synergism between the GTPase Activities of EF-Tu·GTP and EF-G·GTP on Empty Ribosomes. Elongation Factors as Stimulators of the Ribosomal Oscillation between Two Conformations, **242**, 644–654.

Stereochemistry
Cytidine Deaminase. The 2·3 Å Crystal Structure of an Enzyme : Transition-state Analog Complex, **235**, 635–656.

Stereospecificity
Crystal Structure of a NAD-dependent D-Glycerate Dehydrogenase at 2·4 Å Resolution, **236**, 1123–1140.

Steric interactions
Evidence for Strained Interactions between Side-chains and the Polypeptide Backbone, **235**, 27–32.

Steroid hormones
The Human Calbindin-D_{9k} Gene. Complete Structure and Implications on Steroid Hormone Regulation, **235**, 1231–1238.

Stop codon
Premature Stop Codons Inactivate the RT6 Genes of the Human and Chimpanzee Species, **243**, 537–546.

Stopped-flow kinetics
Unfolding-refolding Kinetics of the Tryptophan Synthase α Subunit by CD and Fluorescence Measurements, **236**, 1227–1240.

***str* operon**
Post-transcriptional Regulation of the *str* Operon in *Escherichia coli*. Ribosomal Protein S7 Inhibits Coupled Translation of S7 but not its Independent Translation, **235**, 111–124.

Strand cleavage
DNA-Protein Cooperativity in the Assembly and Stabilization of Mu Strand Transfer Complex. Relevance of DNA Phasing and *att* Site Cleavage, **238**, 514–527.

Strand exchange
A Parallel DNA Triplex as a Model for the Intermediate in Homologous Recombination, **239**, 181–200.

Strand transfer
Kinetic Analysis of the Catalysis of Strand Transfer From Internal Regions of Heteropolymeric RNA Templates by Human Immunodeficiency Virus Reverse Transcriptase, **243**, 558–567.

Streptococcus
The Third IgG-Binding Domain from Streptococcal Protein G. An Analysis by X-ray Crystallography of the Structure Alone and in a Complex with Fab, **243**, 906–918.

Streptococcus faecium
Crystallization, Characterization and Preliminary Crystallographic Studies of Carbamate Kinase of *Streptococcus faecium*, **235**, 1345–1347.

Streptococcus pneumoniae
Three Highly Homologous Membrane-bound Lipoproteins Participate in Oligopeptide Transport by the Ami System of the Gram-positive *Streptococcus pneumoniae*, **241**, 44–58.

***Streptococcus pyogenes* plasmid pSM19035**
A Novel Site-specific Recombinase Encoded by the *Streptococcus pyogenes* Plasmid pSM19035, **238**, 159–172.

Streptomycin
Selective Perturbation of G530 of 16 S rRNA by Translational Miscoding Agents and a Streptomycin-dependence Mutation in Protein S12, **235**, 156–172.
Mutations in 23 S Ribosomal RNA Perturb Transfer RNA Selection and can Lead to Streptomycin Dependence, **235**, 813–824.
Location of the Streptomycin Ribosomal Binding Site Explains its Pleiotropic Effects on Protein Biosynthesis, **235**, 1251–1260.
Synergism between the GTPase Activities of EF-Tu·GTP and EF-G·GTP on Empty Ribosomes. Elongation Factors as Stimulators of the Ribosomal Oscillation between Two Conformations, **242**, 644–654.

Stretptomyces griseus
A Crystallographic Re-investigation into the Structure of *Streptomyces griseus* Proteinase A Reveals an Acyl-enzyme Intermediate, **241**, 574–587.

Stringent control
High Concentrations of ppGpp Decrease the RNA Chain Growth Rate. Implications for Protein Synthesis and Translational Fidelity During Amino Acid Starvation in *Escherichia coli*, **236**, 441–454.
Isolated P2 rRNA Promoters of *Escherichia coli* are Strong Promoters that are Subject to Stringent Control, **243**, 152–156.

Structural alignment
Alignment of Beta-barrels in $(\beta/\alpha)_8$ Proteins using Hydrogen-bonding Pattern, **244**, 168–182.

Structural comparison
The Immunoglobulin Fold. Structural Classification, Sequence Patterns and Common Core, **242**, 309–320.
A Graph-theoretic Approach to the Identification of Three-dimensional Patterns of Amino Acid Side-chains in Protein Structures, **243**, 327–344.

Structural comparisons
Refined Crystal Structure of Rat Parvalbumin, a Mammalian α-lineage Parvalbumin, at 2·0 Å Resolution, **235**, 718–732.

Structural mimicry
Structural Mimicry and Enhanced Immunogenicity of Peptide Epitopes Displayed on Filamentous Bacteriophage. The V3 Loop of HIV-1 gp120, **243**, 167–172.

Structural motif
Four Helix Bundle Diversity in Globular Proteins, **236**, 1356–1368.

Structural repertoires
Principles Determining the Structure of β-Sheet Barrels in Proteins. I. A Theoretical Analysis, **236**, 1369–1381.

Structural stability
The Refined Crystal Structure of Hexon, the Major Coat Protein of Adenovirus Type 2, at 2·9 Å Resolution, **242**, 430–455.

Structural thermodynamics
Structure Based Prediction of Protein Folding Intermediates, **242**, 62–80.

Structural variations
Sequence Dependence of DNA Structure in Solution, **235**, 325–330.

Structure
In Vitro Genetic Analysis of the Hinge Region Between Helical Elements P5-P4-P6 and P7-P3-P8 in the *sunY* Group I Self-splicing Intron, **235**, 140–155.
The Refined Three-Dimensional Structure of an Insect Virus at 2·8 Å Resolution, **235**, 565–586.
Cardiotoxin III from the Taiwan Cobra (*Naja naja atra*). Determination of Structure in Solution and Comparison with Short Neurotoxins, **235**, 1291–1301.
Solution Structure of a Pair of Fibronectin Type 1 Modules with Fibrin Binding Activity, **235**, 1302–1311.
Mutation of Tyrosine-67 to Phenylalanine in Cytochrome *c* Significantly Alters the Local Heme Environment, **235**, 1326–1341.
The Orientation of Spin-probes Attached to Cys374 on Actin in Oriented Gels, **236**, 703–709.
The Role of a Conserved Internal Water Molecule and Its Associated Hydrogen Bond Network in Cytochrome *c*, **236**, 786–799.
Structure Characterization of Membrane Bound and Surface Adsorbed Protein, **237**, 1–4.
The Solution Structures of the *trp* Repressor-Operator DNA Complex, **238**, 592–614.
Hydrogen Exchange Dynamics of the P22 Virion Determined by Time-resolved Raman Spectroscopy. Effects of Chromosome Packaging on the Kinetics of Nucleotide Exchanges, **241**, 68–82.
Structure of Phosphorylase Kinase. A Three-dimensional Model Derived from Stained and Unstained Electron Micrographs, **241**, 94–102.
Solution Structure of Reactive-site Hydrolyzed Turkey Ovomucoid Third Domain by Nuclear Magnetic Resonance and Distance Geometry Methods, **242**, 215–230.
Crystallization of *Ulex europaeus* Lectin I, **243**, 345–346.
Structure and Transcription of the L11-L1-L10-L12 Ribosomal Protein Gene Operon from the Extreme Thermophilic Archaeon *Sulfolobus acidocaldarius*, **244**, 242–249.
Purification, Crystallization and Preliminary X-ray Diffraction Studies of Alpha-Toxin of *Clostridium perfringens*, **244**, 648–650.

3-D structure
Three-dimensional Model of *Escherichia coli* Gyrase B Subunit Crystallized in Two-dimensions on Novobiocin-Linked Phospholipid Films, **236**, 618–628.
Three-dimensional Structure of Calicivirus, **240**, 256–264.
A Structural Analysis of Phosphate and Sulphate Binding Sites in Proteins. Estimation of Propensities for Binding and Conservation of Phosphate Binding Sites, **242**, 321–329

Structure modelling
Pressure and Propylene Carbonate Denaturation of Native and "Aged" Phosphorylated Cholinesterase, **238**, 466–478.

Structure prediction
MONTY: A Monte Carlo Approach to Protein-DNA Recognition, **235**, 318–324.
Structure Based Prediction of Protein Folding Intermediates, **242**, 62–80.

Structure refinement
The High-resolution Structure of the Histidine-containing Phosphocarrier Protein HPr from *Escherichia coli* Determined by Restrained Molecular Dynamics from Nuclear Magnetic Resonance Overhauser Effect Data, **237**, 544–559.

Structure-based drug design
Locations of Anti-AIDS Drug Binding Sites and Resistance Mutations in the Three-dimensional Structure of HIV-1 Reverse Transcriptase. Implications for Mechanisms of Drug Inhibition and Resistance, **243**, 369–387.

Structure-function relationships
Pyrimidine Ring Fragmentation Products. Effects of Lesion Structure and Sequence Context on Mutagenesis, **236**, 514–530.
Ultrafast Measurements of Geminate Recombination of NO with Site-specific Mutants of Human Myoglobin, **238**, 437–444.

Subdomain
GAAA Tetraloop and Conserved Bulge Stabilize Tertiary Structure of a Group I Intron Domain, **236**, 49–63.

Substitution rate
Wide Variations in Neighbor-dependent Substitution Rates, **236**, 1022–1033.
Molecular Phylogeny of the Alphaherpesvirinae Subfamily and a Proposed Evolutionary Timescale, **238**, 9–22.

Substitution tables
Use of Amino Acid Environment-dependent Substitution Tables and Conformational Propensities in Structure Prediction from Aligned Sequences of Homologous Proteins. I. Solvent Accessibility Classes, **238**, 682–692.
Use of Amino Acid Environment-dependent Substitution Tables and Conformational Propensities in Structure Prediction from Aligned Sequences of Homologous Proteins. II. Secondary Structures, **238**, 693–708.

Substitutions
Structural Features can be Unconserved in Proteins with Similar Folds. An Analysis of Side-chain to Side-chain Contacts Secondary Structure and Accessibility, **244**, 332–350.

Substrate adenylation
Bacterial Expression of Catalytically Active Fragments of the Multifunctional Enzyme Enniatin Synthetase, **243**, 116–122.

Substrate binding
Enzyme–Substrate Interactions. Structure of Human Carbonic Anhydrase I Complexed with Bicarbonate, **241**, 226–232.

Subtilisin
Cavity Mutants of Savinase™. Crystal Structures and Differential Scanning Calorimetry Experiments Give Hints of the Function of the Buried Water Molecules in Subtilisins, **242**, 193–202.

Subunit assembly
Deletions within the DNA Recognition Subunit of M.*Eco*R124I that Identify a Region Involved in Protein–Protein Interactions between HsdS and HsdM, **241**, 35–43.

Subunit connectivity
The Structure of F-actin. Results of Global Searches Using Data from Electron Microscopy and X-ray Crystallography, **240**, 138–154.

Subunit mapping
An Epitope Proximal to the Carboxyl Terminus of the α-Subunit is Located near the Lobe Tips of the Phosphorylase Kinase Hexadecamer, **235**, 974–982.

Sulfide carrier
Structure of the Sulfide-reactive Hemoglobin from the Clam *Lucina pectinata*. Crystallographic Analysis at 1·5 Å Resolution, **244**, 86–99.

Sulfolobus acidocaldarius
SAV, an Archaebacterial Gene with Extensive Homology to a Family of Highly Conserved Eukaryotic ATPases, **235**, 396–401.
Structure and Transcription of the L11-L1-L10-L12 Ribosomal Protein Gene Operon from the Extreme Thermophilic Archaeon *Sulfolobus acidocaldarius*, **244**, 242–249.

Sulfolobus solfataricus
Crystallization of a Hyperthermophilic Archaeal Elongation Factor 1α, **242**, 175–177.
The Molecular Chaperonin TF55 from the Thermophilic Archaeon *Sulfolobus solfataricus*. A Biochemical and Structural Characterization, **242**, 397–407.

Sulfonamide complexes
Drug–Protein Interactions. Refined Structures of Three Sulfonamide Drug Complexes of Human Carbonic Anhydrase I Enzyme, **243**, 298–309.

Supercoiling
The Complex of DNA Gyrase and Quinolone Drugs with DNA Forms a Barrier to Transcription by RNA Polymerase, **242**, 351–363.

Superoxide dismutase
Crystallization and Preliminary X-ray Analysis of the Superoxide Dismutase from *Mycobacterium tuberculosis*, **235**, 1156–1158.
Conserved Patterns in the Cu,Zn Superoxide Dismutase Family, **238**, 366–386.
Crystallographic Study of Azide-inhibited Bovine Cu,Zn Superoxide Dismutase, **240**, 179–183.

Supersecondary structure
Four Helix Bundle Diversity in Globular Proteins, **236**, 1356–1368.

Suppression
Genetic Implication for an Interaction Between Release Factor One and Ribosomal Protein L7/L12 *in vivo*, **242**, 614–618.

Suppressor mutations
Molecular Modeling of RNA Polymerase II Mutations onto DNA Polymerase I, **244**, 13–22.

Surface accessibility
Bona Fide Prediction of Aspects of Protein Conformation. Assigning Interior and Surface Residues from Patterns of Variation and Conservation in Homologous Protein Sequences, **235**, 926–958.

Surface linking number
Nucleosome Structural Changes Due to Acetylation, **236**, 685–690.
Crystallization and Preliminary X-ray Diffraction Studies of Curculin. A New Type of Sweet Protein Having Taste-modifying Action, **238**, 286.

SV40, *see* Simian virus 40

Symmetry
The Symmetry of *Escherichia coli* cpn60 (GroEL) Determined by X-ray Crystallography, **235**, 47–52.
Native Collagen Fibrils From Echinoderms are Molecularly Bipolar, **235**, 73–79.

Synapse
A Creatine Transporter cDNA from *Torpedo* Illustrates Structure/Function Relationships in the GABA/Noradrenaline Transporter Family, **241**, 317–324.

Synchrotron
Crystal Structure and Refinement of Cytochrome $P450_{terp}$ at 2·3 Å Resolution, **236**, 1169–1185.
Preliminary Crystallographic Studies of the Ligand-binding Domain of the Thyroid Hormone Receptor Complexed with Triiodothyronine, **237**, 236–239.
X-ray Diffraction Study of the Live Squid Retina, **238**, 139–144.
Enzyme–Substrate Interactions. Structure of Human Carbonic Anhydrase I Complexed with Bicarbonate, **241**, 226–232.
Drug–Protein Interactions. Refined Structures of Three Sulfonamide Drug Complexes of Human Carbonic Anhydrase I Enzyme, **243**, 298–309.

T-A step
The Crystal Structure of C-C-A-T-T-A-A-T-G-G. Implications for Bending of *B*-DNA at T-A Steps, **239**, 79–96.

TAFs
Yeast TBP can Replace its Human Homologue in the RNA Polymerase I-specific Multisubunit Factor SL1, **243**, 840–845.

Tail consensus
The Molecular Cloning and Characterization of *Drosophila melanogaster* Myosin-IA and Myosin-IB, **239**, 347–356.

Tail fiber
Alterations of Receptor Specificities of Coliphages of the T2 Family, **240**, 105–110.

Talin
Analysis of Repeated Motifs in the Talin Rod, **235**, 1278–1290.

Tandem duplication
recA-independent and *recA*-dependent Intramolecular Plasmid Recombination. Differential Homology Requirement and Distance Effect, **235**, 414–423.

Taste-modifying protein
Crystallization and Preliminary X-ray Diffraction Studies of Curculin. A New Type of Sweet Protein Having Taste-modifying Action, **238**, 286.

Tat
Human Immunodeficiency Virus Type 1 Tat Directs Transcription Through Attenuation Sites within the Mouse c-myc Gene, **243**, 568–573.

Tau
Complete Sequence of 3′-Untranslated Region of Tau from Rat Central Nervous System. Implications for mRNA Heterogeneity, **241**, 325–331.

Tautomerase
Preliminary Crystallographic Analysis of 4-Oxalocrotonate Tautomerase Reveals the Oligomeric Structure of the Enzyme, **243**, 799–801.

4-Oxalocrotonate tautomerase reveals
Preliminary Crystallographic Analysis of 4-Oxalocrotonate Tautomerase Reveals the Oligomeric Structure of the Enzyme, **243**, 799–801.

Tazl-1
Transmembrane Signaling. Mutational Analysis of the Cytoplasmic Linker Region of Taz1-1, a Tar-EnvZ Chimeric Receptor in *Escherichia coli*, **244**, 477–481.

Tc1 transposon-like sequences
Tc1 Transposon-like Sequences are Widely Distributed in Salmonids, **241**, 26–34.

T-cell
Crystallization and Preliminary X-ray Diffraction Studies of Human RANTES, **242**, 589–590.

T-cell marker
Premature Stop Codons Inactivate the RT6 Genes of the Human and Chimpanzee Species, **243**, 537–546.

T-cell receptor
Crystallization and Preliminary X-ray Diffraction Analysis of the β-Chain of a T-cell Antigen Receptor, **235**, 795–797.
Crystallization and Preliminary X-ray Diffraction Study of a Bacterially Produced T-cell Antigen Receptor Vα Domain, **239**, 339–341.
Correctly Folded T-cell Receptor Fragments in the Periplasm of *Escherichia coli*. Influence of Folding Catalysts, **242**, 655–669.

T·CG triple
Solution Structure and Hydration Patterns of a Pyrimidine·Purine·Pyrimidine DNA Triplex Containing a Novel T·CG Base-triple, **241**, 600–619.

Telokin
Many of the Immunoglobulin Superfamily Domains in Cell Adhesion Molecules and Surface Receptors Belong to a New Structural Set Which is Close to That Containing Variable Domains, **238**, 528–539.

Telomere
Hypermethylation of Telomere-like Foldbacks at Codon 12 of the Human c-Ha-*ras* Gene and the Trinucleotide Repeat of the *FMR-1* Gene of Fragile X, **243**, 143–151.
Solution Structure of a Parallel-Stranded Tetraplex Formed by d(TG_4T) in the Presence of Sodium Ions by Nuclear Magnetic Resonance Spectroscopy, **243**, 458–471.

Telomere repeats
Interstitial Telomeric Repeats within the *Arabidopsis thaliana* Genome, **239**, 163–169.

TEM mutants
TEM β-Lactamase Mutants Hydrolysing Third-generation Cephalosporins. A Kinetic and Molecular Modelling Analysis, **244**, 625–639.

Temperature
Adaptation to Extreme Environments: Structure–Function Relationships in Emperor Penguin Haemoglobin, **237**, 615–621.
Genetic Implication for an Interaction Between Release Factor One and Ribosomal Protein L7/L12 *in vivo*, **242**, 614–618.

Temperature factor
Thermal Expansion of Hen Egg-white Lysozyme. Comparison of the 1·9 Å Resolution Structures of the Tetragonal Form of the Enzyme at 100 K and 298 K, **235**, 302–317.

Template recognition
Identification of Recognition Elements on Bacteriophage Qβ Minus Strand RNA that are Essential for Template Activity with Qβ Replicase, **243**, 811–815.

Terbium
Determination of Electrostatic Potential Around Specific Locations on the Surface of Actin by Diffusion-enhanced Fluorescence Resonance Energy Transfer, **241**, 714–731.

Termination
Bacteriophage Lambda N-Dependent Transcription Antitermination. Competition for an RNA Site May Regulate Antitermination, **236**, 217–228.
Characterization of Two Types of Termination Signal for Bacteriophage T7 RNA Polymerase, **238**, 145–158.
The Concentration of Polypeptide Chain Release Factors 1 and 2 at Different Growth Rates of *Escherichia coli*, **238**, 302–308.
Intragenic Processing in Yeast rRNA is Dependent on the 3′ External Transcribed Spacer, **239**, 170–180.
The Minimal Sequence Needed to Define a Functional DNA Terminator in *Bacillus subtilis*, **241**, 335–340.
HIV-1 Reverse Transcription. A Termination Step at the Center of the Genome, **241**, 651–662.
Mutations in Helix 34 of *Escherichia coli* 16 S Ribosomal RNA Have Multiple Effects on Ribosome Function and Synthesis, **243**, 402–412.
Stability of *Escherichia coli* Transcription Complexes Near an Intrinsic Terminator, **244**, 36–51.
RNA Chain Elongation and Termination by Mammalian RNA Polymerase III. Analysis of tRNA Gene Transcription by Imposing a Reversible Factor-mediated Block to Elongation using a Sequence-specific DNA Binding Protein, **244**, 482–493.

Tertiary structure
See also Protein tertiary structure.
Multiple Folded Conformations of a Hammerhead Ribozyme Domain under Cleavage Conditions, **239**, 366–370.

Tetrahymena
Visualization of Protein–Nucleic Acid Interactions Involved in the *in Vitro* Assembly of the *Escherichia coli* 50 S Ribosomal Subunit, **235**, 1239–1250.

Tetramer
Close Packing of an Oligomeric Eye Lens β-Crystallin Induces Loss of Symmetry and Ordering of Sequence Extensions, **236**, 1250–1258.

Tetraubiquitin
Structure of Tetraubiquitin Shows How Multiubiquitin Chains Can be Formed, **236**, 601–609.

T-even bacteriophage, *see* Bacteriophage

TF55
The Molecular Chaperonin TF55 from the Thermophilic Archaeon *Sulfolobus solfataricus*. A Biochemical and Structural Characterization, **242**, 397–407.

TFC arm
A Functional Mutant of $tRNA^{Arg}_2$ with Ten Extra Nucleotides in Its TFC Arm, **235**, 1369–1376.

TFIIIA, *see* Transcription factor TFIIIA

TFIIIC
Encounters of *Saccharomyces cerevisiae* RNA Polymerase III with its Transcription Factors during RNA Chain Elongation, **235**, 1193–1205.

TGGCA protein
The Genes for Transcription Factor Nuclear Factor I Give Rise to Corresponding Splice Variants between Vertebrate Species, **238**, 860–865.

Theiler's murine encephalomyelitis virus
Starting Window, a Distinct Element in the Cap-independent Internal Initiation of Translation on Picornaviral RNA, **241**, 398–414.

Thermal denaturation
Bases Defining an Ammonium and Magnesium Ion-Dependent Tertiary Structure Within the Large Subunit Ribosomal RNA, **244**, 572–585.

Thermal expansion
Thermal Expansion of Hen Egg-white Lysozyme. Comparison of the 1·9 Å Resolution Structures of the Tetragonal Form of the Enzyme at 100 K and 298 K, **235**, 302–317.

Thermal stability
Thermal Stabilization of Thymidylate Synthase by Engineering Two Disulfide Bridges Across the Dimer Interface, **235**, 89–94.
Domain Structure of the Fib-1 and Fib-2 Regions of Human Fibronectin. Thermodynamic Properties of the Type I Finger Module, **238**, 833–844.
The Molecular Chaperonin TF55 from the Thermophilic Archaeon *Sulfolobus solfataricus*. A Biochemical and Structural Characterization, **242**, 397–407.

Thermal studies
Crystallization and Preliminary X-ray Crystallographic Studies of Thermostable Xylanase Crystals Isolated from *Paecilomyces varioti*, **243**, 806–808.

Thermoanaerobacterium thermosulfurigenes
Crystallization and Preliminary X-ray Diffraction Studies of Xylose Isomerase from *Thermoanaerobacterium thermosulfurigenes* Strain 4B, **240**, 504–506.

Thermodynamics
See also Calorimetry.
Thermodynamic Puzzle of Apomyoglobin Unfolding, **235**, 1318–1325.
Thermodynamics of Substrates and Reversible Inhibitors Binding to the Active Site Cleft of Human α-thrombin, **239**, 569–577.
DNA Conformational Changes Associated with the Cooperative Binding of cI-repressor of Bacteriophage λ to O_R, **244**, 494–510.

Thermodynamics of translation
Translational Initiation on Structured Messengers. Another Role for the Shine-Dalgarno Interaction, **235**, 173–184.
Control of Translation by mRNA Secondary Structure in *Escherichia coli*. A Quantitative Analysis of Literature Data, **244**, 144–150.

Thermophilic bacterium
Crystallization of Mutant β Subunit of F_1-ATPase from Thermophilic *Bacillus* PS3, **242**, 709–711.

Thermophilic xylose isomerase
Crystallization and Preliminary X-ray Diffraction Studies of Xylose Isomerase from *Thermoanaerobacterium thermosulfurigenes* Strain 4B, **240**, 504–506.

***Thermus thermophilus* aspartyl-tRNA synthetase**
Synthesis and Recognition of Aspartyl-adenylate by *Thermus thermophilus* Aspartyl-tRNA Synthetase, **244**, 158–167.

Thiamine diphosphate
The Refined Structures of a Stabilized Mutant and of Wild-type Pyruvate Oxidase from *Lactobacillus plantarum*, **237**, 315–335.
Refined Structure of Transketolase from *Saccharomyces cerevisiae* at 2·0 Å Resolution, **238**, 387–404.

Thin filament
Gold/Fab Immuno Electron Microscopy Localization of Troponin H and Troponin T in *Lethocerus* Flight Muscle, **239**, 52–67.
Tropomyosin Length and Two-stranded F-actin Flexibility in the Thin Filament, **243**, 520–529.

Thin pilus
DNA Rearrangement of the Shufflon Determines Recipient Specificity in Liquid Mating of IncI1 Plasmid R64, **243**, 6–9.

Thiobacillus versutus
Crystal Structure Analysis and Refinement at 2·15 Å Resolution of Amicyanin, a Type I Blue Copper Protein, from *Thiobacillus versutus*, **236**, 1196–1211.

Thioesterase
Crystallization of Thioesterase II from *Escherichia coli*, **236**, 660–662.

Thiolester mechanism
Non-phosphorylating GAPDH of Higher Plants is a Member of the Aldehyde Dehydrogenase Superfamily with no Sequence Homology to Phosphorylating GAPDH, **237**, 165–171.

Thioredoxin reductase
Arabidopsis thaliana NAPHP Thioredoxin Reductase. cDNA Characterization and Expression of the Recombinant Protein in *Escherichia coli*, **235**, 1357–1363.
Crystal Structure of *Escherichia coli* Thioredoxin Reductase Refined at 2 Å Resolution. Implications for a Large Conformational Change during Catalysis, **236**, 800–816.

Thiostrepton
Cross-hypersensitivity Effects of Mutations in 23 S rRNA Yield Insight into Aminoacyl-tRNA Binding, **244**, 151–157.

Third-generation cephalosporins
TEM β-Lactamase Mutants Hydrolysing Third-generation Cephalosporins. A Kinetic and Molecular Modelling Analysis, **244**, 625–639.

Three-dimensional image reconstruction
Fungal Virus Capsids are Cytoplasmic Compartments for the Replication of Double-stranded RNA Formed as Icosahedral Shells of Asymmetric Gag Dimers, **244**, 255–258.

Three-dimensional protein structure
See also Protein structure.
Significance of Root-Mean-Square Deviation in Comparing Three-dimensional Structures of Globular Proteins, **235**, 625–634.
Tertiary Structure of Erabutoxin b in Aqueous Solution as Elucidated by Two-dimensional Nuclear Magnetic Resonance, **240**, 155–166.
Structure of Cobra Cardiotoxin CTXI as Derived from Nuclear Magnetic Resonance Spectroscopy and Distance Geometry Calculations, **240**, 445–458.

Three-dimensional reconstruction
The Organization of the Spike Complex of Semliki Forest Virus, **236**, 572–583.
Quaternary Structure of *Octopus vulgaris* Hemocyanin. Three-dimensional Reconstruction from Frozen-hydrated Specimens and Intramolecular Location of Functional Units O_2e and O_2b, **238**, 75–87.
Towards Atomic Interpretation of F-Actin Filament Three-dimensional Reconstructions, **242**, 683–700.
Three-dimensional Reconstruction from a Frozen-hydrated Specimen of the Chiton *Lepidochiton sp.* Hemocyanin, **244**, 640–647.

Three-dimensional solution structure
Solution Structure of the Type 1 Blue Copper Protein Amicyanin from *Thiobacillus versutus*, **240**, 358–371.

Three-dimensional structure
Crystal Structure of the Fungal Peroxidase from *Arthromyces ramosus* at 1·9 Å Resolution. Structural Comparisons with the Lignin and Cytochrome *c* Peroxidases, **235**, 331–344.
Solution Structure of the 3′-End of Brome Mosaic Virus Genomic RNAs. Conformational Mimicry with Canonical tRNAs, **235**, 508–531.
Crystal Structure Analysis and Refinement at 2·15 Å Resolution of Amicyanin, a Type 1 Blue Copper Protein, from *Thiobacillus versutus*, **236**, 1196–1211.
Structure of the C_3HC_4 Domain by ^{1}H-nuclear Magnetic Resonance Spectroscopy. A New Structural Class of Zinc-finger, **237**, 201–211.
Molecular Structure at 1·8 Å of Mouse Liver Class Pi Glutathione S-transferase Complexed with *S*-(*p*-Nitrobenzyl)glutathione and Other Inhibitors, **237**, 298–314.
Solvent Rearrangement in an Antigen–Antibody Interface Introduced by Site-directed Mutagenesis of the Antibody Combining Site, **238**, 496–500.
Crystal Structures of *Escherichia coli* Aspartate Aminotransferase in Two Conformations. Comparison of an Unliganded Open and Two Liganded Closed Forms, **239**, 285–305.
Crystallisation of the Glycyl-tRNA Synthetase from *Thermus thermophilus* and Initial Crystallographic Data, **241**, 732–735.
A Major Family of Motifs Involving G·A Mismatches in Ribosomal RNA, **242**, 1–8.
Protein Subunit Structures in the Herpes Simplex Virus A-capsid Determined from 400 kV Spot-scan Electron Cryomicroscopy, **242**, 456–469.
Three-dimensional Structures of the Free and the Antigen-complexed Fab from Monoclonal Anti-lysozyme Antibody D44.1, **243**, 767–781.
Three-dimensional Structure of the Human Immunodeficiency Virus Type 1 Matrix Protein, **244**, 198–223.

Thrombin
Molecular Recognition by Thrombin. Role of the Slow→Fast Transition, Site-specific Ion Binding Energetics and Thermodynamic Mapping of Structural Components, **235**, 733–746.
Three-dimensional Solution Structure of the Thrombin-binding DNA Aptamer d(GGTTGGTGTGGTTGG), **235**, 1532–1547.
Thermodynamics of Substrates and Reversible Inhibitors Binding to the Active Site Cleft of Human α-thrombin, **239**, 569–577.
Isolation of a Peptide Antagonist to the Thrombin Receptor using Phage Display, **244**, 361–369.

Thymidylate synthase
Thermal Stabilization of Thymidylate Synthase by Engineering Two Disulfide Bridges Across the Dimer Interface, **235**, 89–94.

Thymine starvation
Thymine Starvation-induced Structural Changes in *Escherichia coli* DNA. Detection by Pulsed Field Gel Electrophoresis and Evidence for Involvement of Homologous Recombination, **243**, 611–620.

Thyroid hormone
Preliminary Crystallographic Studies of the Ligand-binding Domain of the Thyroid Hormone Receptor Complexed with Triiodothyronine, **237**, 236–239.

TIM-barrel
Alignment of Beta-barrels in $(\beta/\alpha)_8$ Proteins using Hydrogen-bonding Pattern, **244**, 168–182.

Time-resolved X-ray diffraction
On the Photochemical Release of Phosphate from 3,5-Dinitrophenyl Phosphate in a Protein Crystal, **236**, 995–1000.

Tissue plasminogen activator
Interactions of Plasminogen with Polymerizing Fibrin and its Derivatives, Monitored with a Photoaffinity Cross-linker and Electron Microscopy, **235**, 1117–1135.

Titration
Prediction of pH-dependent Properties of Proteins, **238**, 415–436.

T-lymphocyte, *see* T-cells

Tn*3* resolvase
The Linkage Change of a Knotting Reaction Catalysed by Tn*3* Resolvase, **239**, 25–36.

Tn*5* transposase
A Functional Analysis of the Tn*5* Transposase. Identification of Domains Required for DNA Binding and Multimerization, **241**, 166–177.

TNFα, *see* Tumor necrosis factor

Tobacco mosaic virus
Structure-function Relationship Between Tobacco Mosaic Virus Coat Protein and Hypersensitivity in *Nicotiana sylvestris*, **242**, 130–138.

Tobamoviruses
Structure Determination of Cucumber Green Mottle Mosaic Virus by X-ray Fiber Diffraction. Significance for the Evolution of Tobamoviruses, **239**, 371–384.

Topoisomerase
Mapping the Functional Domains of Bacteriophage Lambda Integrase Protein, **235**, 908–925.

Topoisomerase II
Linker Insertion Mutagenesis of *Drosophila* Topoisomerase II. Probing The Structure of Eukaryotic Topoisomerase II, **235**, 436–447.
Conformational Drug Determinants of the Sequence Specificity of Drug-stimulated Topoisomerase II DNA Cleavage, **235**, 1218–1230.
Intramolecular and Intermolecular DNA Ligation Mediated by Topoisomerase II, **241**, 18–25.
Phosphorylation of the C-terminal Domain of Yeast Topoisomerase II by Casein Kinase II Affects DNA-Protein Interaction, **243**, 10–24.

Topology
Holliday Junction Crossover Topology, **236**, 91–105.
Homology Modeling of Divergent Proteins, **241**, 143–149.
Topological Scanning of the P1 Plasmid Partition Site, **243**, 190–198.
Analysis and Classification of Disulphide Connectivity in Proteins. The Entropic Effect of Cross-linkage, **244**, 448–463.

Torpedo
A Creatine Transporter cDNA from *Torpedo* Illustrates Structure/Function Relationships in the GABA/Noradrenaline Transporter Family, **241**, 317–324.

Toxin
See also Neurotoxin.
Crystal Structure of Toxin II from the Scorpion *Androctonus australis* Hector Refined at 1·3 Å Resolution, **238**, 88–103.
X-ray Structure at 1·55 Å of Toxin γ, a Cardiotoxin from *Naja nigricollis* Venom. Crystal Packing Reveals a Model for Insertion into Membranes, **239**, 122–136.
Proton NMR Studies of the Structural and Dynamical Effect of Chemical Modification of a Single Aromatic Side-chain in a Snake Cardiotoxin. Relation to the Structure of the Putative Binding Site and the Cytolytic Activity of the Toxin, **243**, 719–735.
The Characterization and Crystallization of a Virally Encoded *Ustilago maydis* KP4 Toxin, **243**, 792–795.
X-ray Structure of Recombinant Ricin A-Chain at 1·8 Å Resolution, **244**, 410–422.
Purification, Crystallization and Preliminary X-ray Diffraction Studies of Alpha-Toxin of *Clostridium perfringens*, **244**, 648–650.

tR2 terminator
Stability of *Escherichia coli* Transcription Complexes Near an Intrinsic Terminator, **244**, 36–51.

Transactivation
The Modular Architecture of Bacterial Response Regulators. Insights into the Activation Mechanism of the BvgA Transactivator of *Bordetella pertussis*, **241**, 363–377.

Transacylase
Crystallization of the Malonyl Coenzyme A–Acyl Carrier Protein Transacylase from *Escherichia coli*, **242**, 99–102.

Transcribed spacers
Intragenic Processing in Yeast rRNA is Dependent on the 3′ External Transcribed Spacer, **239**, 170–180.

Transcript cleavage factor
Crystallization of GreA, a Transcript Cleavage Factor from *Escherichia coli*, **242**, 582–585.

Transcription
Analysis of RNA Chain Elongation and Termination by *Saccharomyces cerevisiae* RNA Polymerase III, **235**, 1173–1192.
Factor Independent Activation of *rrnB* P1. An "Extended" Promoter with an Upstream Element that Dramatically Increases Promoter Strength, **235**, 1421–1435.
A Promoter Melting Region in the Primary σ Factor of *Bacillus subtilis*. Identification of Functionally Important Aromatic Amino Acids, **235**, 1470–1488.
A DNA Minor Groove-binding Ligand Both Potentiates and Arrests Transcription by RNA Polymerase II. Elongation Factor SII Enables Readthrough at Arrest Sites, **236**, 725–737.
Bacteriophage T7 RNA Polymerase and Its Active-site Mutants. Kinetic, Spectroscopic and Calorimetric Characterization, **237**, 5–19.
Characterization of Two Types of Termination Signal for Bacteriophage T7 RNA Polymerase, **238**, 145–158.
The δ Subunit of *Bacillus subtilis* RNA Polymerase. An Allosteric Effector of the Initiation and Core-recycling Phases of Transcription, **239**, 1–14.
Stalling of *Escherichia coli* RNA Polymerase in the +6 to +12 Region *in Vivo* is Associated with Tight Binding to Consensus Promoter Elements, **239**, 455–465.
Context-dependent Effects of Upstream A-Tracts. Stimulation or Inhibition of *Escherichia coli* Promoter Function, **239**, 466–475.
Suppression of Yeast RNA Polymerase III Mutations by the *URP2* Gene Encoding a Protein Homologous to the Mammalian Ribosomal Protein S20, **240**, 1–7.
In Vitro Interaction of Nitrate-responsive Regulatory Protein NarL with DNA Target Sequences in the *fdnG*, *narG*, *narK* and *frdA* Operon Control Regions of *Escherichia coli* K-12, **241**, 150–165.
The Promoter of the H1° Histone Gene contains a DNA Element bound by Retinoic Acid Receptors, **242**, 37–44.
Transcription of the *xyl* Operon is Controlled in *Bacillus subtilis* by Tandem Overlapping Operators Spaced by Four Base-pairs, **243**, 413–424.
Human Immunodeficiency Virus Type 1 Tat Directs Transcription Through Attenuation Sites within the Mouse c-myc Gene, **243**, 568–573.
Yeast TBP can Replace its Human Homologue in the RNA Polymerase I-specific Multisubunit Factor SL1, **243**, 840–845.
Structure and Transcription of the L11-L1-L10-L12 Ribosomal Protein Gene Operon from the Extreme Thermophilic Archaeon *Sulfolobus acidocaldarius*, **244**, 242–249.

Transcription activation
Asymmetric Arrangement of Two Alpha Subunits within *Escherichia coli* RNA Polymerase. Involvement of One Alpha Subunit in Contact with cAMP Receptor Protein, **236**, 1283–1288.
Requirement for an A-tract Structure at the Binding Site of Phage ϕ29 Transcriptional Activator, **237**, 175–181.
Correlation between DNA Bending and Transcriptional Activation at a Plasmid Promoter, **241**, 7–17.
The Major Dimerization Determinants of the Nitrogen Regulatory Protein NTRC from Enteric Bacteria Lie in Its Carboxy-terminal Domain, **241**, 233–245.
Transcription Activation by the *Escherichia coli* Cyclic AMP Receptor Protein. Receptors Bound in Tandem at Promoters Can Interact Synergistically, **241**, 341–352.
Lambda *cI* Repressor Mutants Altered in Transcriptional Activation, **242**, 23–36.
Functional Map of the Alpha Subunit of *Escherichia coli* RNA Polymerase. Deletion Analysis of the Amino-terminal Assembly Domain, **242**, 107–115.
Reaching Out. Locating and Lengthening the Interdomain Linker in AraC Protein, **242**, 330–338.
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP) I. Saturation and Alanine-scanning Mutagenesis, **243**, 595–602.
Characterization of the Activating Region of *Escherichia coli* Catabolite Gene Activator Protein (CAP). II. Role at Class I and Class II CAP-dependent Promoters, **243**, 603–610.

Transcription activator
Crystallization of a DNA and *N*-acetylserine Binding Fragment (Residues 1 to 233) of *Klebsiella aerogenes* CysB Protein, a Member of the LysR Family, **235**, 1159–1161.

Transcription antitermination
Conservation of a Transcription Antitermination Mechanism in Aminoacyl-tRNA Synthetase and Amino Acid Biosynthesis Genes in Gram-positive Bacteria, **235**, 798–804.

Transcription elongation factor
Crystallization of GreA, a Transcript Cleavage Factor from *Escherichia coli*, **242**, 582–585.

Transcription elongation factor, *see* Elongation factor

Transcription elongation, *see* Elongation

Transcription factor
Role of the Sigma^{70} Subunit of *Escherichia coli* RNA Polymerase in Transcription Activation, **235**, 405–413.
The Genes for Transcription Factor Nuclear Factor I Give Rise to Corresponding Splice Variants between Vertebrate Species, **238**, 860–865.
Sporulation Regulatory Protein SpoIIID from *Bacillus subtilis* Activates and Represses Transcription by Both Mother-cell-specific Forms of RNA Polymerase, **243**, 425–436.

Transcription factor 1
Interrelations of Secondary Structure Stability and DNA-binding Affinity in the Bacteriophage SPO1-encoded Type II DNA-binding Protein TF1, **236**, 139–150.

Transcription factor σ^{70}
A Point Mutation at the Junction of Domain 2·3/2·4 of Transcription Factor σ^{70} Abrogates Productive Transcription and Restores its Expected Mobility on a Denaturing Gel, **242**, 9–22.

Transcription factor TFIIIA
Relative Contributions of the Zinc Fingers of Transcription Factor IIIA to the Energetics of DNA Binding, **244**, 23–35.

Transcription factor TFIIIB
Encounters of *Saccharomyces cerevisiae* RNA Polymerase III with its Transcription Factors during RNA Chain Elongation, **235**, 1193–1205.

Transcription factor TFIIIC
Analysis of RNA Chain Elongation and Termination by *Saccharomyces cerevisiae* RNA Polymerase III, **235**, 1173–1192.

Transcription initiation
An *Escherichia coli* RNA Polymerase Defective in Transcription due to its Overproduction of Abortive Initiation Products, **236**, 72–80.

Direct and Indirect Effects of Mutations in λ P_{RM} on Open Complex Formation at the Divergent P_R Promoter, **240**, 119–126.

Transcription pausing
Encounters of *Saccharomyces cerevisiae* RNA Polymerase III with its Transcription Factors during RNA Chain Elongation, **235**, 1193–1205.

Transcription polarity
Correlation of Translation Efficiency with the Decay of *lacZ* mRNA in *Escherichia coli*, **239**, 608–622.

Transcription regulation
Role of the Sigma^{70} Subunit of *Escherichia coli* RNA Polymerase in Transcription Activation, **235**, 405–413.
Partitioning of Plasmid R1. The *parA* Operon is Autoregulated by ParR and Its Transcription is Highly Stimulated by a Downstream Activating Element, **236**, 1299–1309.
Nuclear Magnetic Resonance Solution Structure of the *fushi tarazu* Homeodomain from *Drosophila* and Comparison with the *Antennapedia* Homeodomain, **238**, 333–345.
Structure–Function Relationship of the Lrp-binding Region Upstream of *LysU* in *Escherichia coli*, **241**, 378–389.
Isolation and Characterization of α-Type HC3 abd β-Type HC5 Subunit Genes of Human Proteasomes, **244**, 117–124.

Transcription repressor
Crystallization and Preliminary X-ray Analysis of an *Escherichia coli* Purine Repressor-Hypoxanthine-DNA Complex, **242**, 302–305.

Transcription termination
Deletion Analysis of the Lambda tR1 Termination Region. Effect of Sequences near the Transcript Release Sites, and the Minimum Length of Rho-dependent Transcripts, **237**, 255–265.
A Quaternary Transcription Termination Complex. Reciprocal Stabilization by Rho Factor and NusG Protein, **243**, 830–839.

Transfer RNA
Generality of the tRNA Origin of Short Interspersed Repetitive Elements (SINEs). Characterization of Three Different tRNA-derived Retroposons in the Octopus, **243**, 25–37.

Transfer RNA, *see* tRNA

Transforming growth factor-β
Crystallization and Preliminary Crystallographic Data of Recombinant Human Osteogenic Protein-1 (hOP-1), **244**, 657–658.

Transient electric birefringence
Characterization of Multiple Oligometric Vimentin Intermediate Filament Units by Transient Electric Birefringence Measurements, **236**, 1241–1249.

Transition state
Lattice Model Simulations of Polypeptide Chain Folding, **235**, 1032–1043.
The Structure of Uridylate Kinase with its Substrates, Showing the Transition State Geometry, **236**, 361–367.
The Activity of Porcine Pancreatic Phospholipase A_2 in 20 % Alcohol/Aqueous Solvent, by Experiment and Electrostatics Calculations, **236**, 904–917.
Methionyl-tRNA Synthetase Needs an Intact and Mobile $_{332}$KMSKS$_{336}$ Motif in Catalysis of Methionyl Adenylate Formation, **242**, 566–577.

Transketolase
Refined Structure of Transketolase from *Saccharomyces cerevisiae* at 2·0 Å Resolution, **238**, 387–404.

Translation
Features in the 5′ Non-coding Sequences of Rabbit α and β-Globin mRNAs that Affect Translational Efficiency, **235**, 95–110.
Evidence that GHN Phase Bias does not Constitute a Framing Code, **235**, 389–395.
Mutations in 23 S Ribosomal RNA Perturb Transfer RNA Selection and can Lead to Streptomycin Dependence, **235**, 813–824.
Transfer RNA Mutation and the Malleability of the Genetic Code, **235**, 1377–1380.
tRNA Structure and Ribosomal Function. I. tRNA Nucleotide 27-43 Mutations Enhance First Position Wobble, **235**, 1381–1394.
tRNA Structure and Ribosomal Function. II. Interaction Between Anticodon Helix and other tRNA Mutations, **235**, 1395–1405.
Thermodynamics of Folding a Pseudoknotted mRNA Fragment, **241**, 246–262.
The *DIM1* Gene Responsible for the Conserved $m^6{}_2Am^6{}_2A$ Dimethylation in the 3′-Terminal Loop of 18 S rRNA is Essential in Yeast, **241**, 492–497.

Translation control
Control of Translation by mRNA Secondary Structure in *Escherichia coli*. A Quantitative Analysis of Literature Data, **244**, 144–150.

Translation fidelity
High Concentrations of ppGpp Decrease the RNA Chain Growth Rate. Implications for Protein Synthesis and Translational Fidelity During Amino Acid Starvation in *Escherichia coli*, **236**, 441–454.

Translation initiation
Translational Initiation on Structured Messengers. Another Role for the Shine-Dalgarno Interaction, **235**, 173–184.
Correlation of Translation Efficiency with the Decay of *lacZ* mRNA in *Escherichia coli*, **239**, 608–622.
The Influence of Adenine-rich Motifs in the 3′ Portion of the Ribosome Binding Site on Human IFN-γ Gene Expression in *Escherichia coli*, **240**, 20–27.
Genetic Evidence for IS*1* Transposition Regulated by InsA and the ΔInsA-B′-InsB Species, which is Generated by Translation from Two Alternative Internal Initiation Sites and Frameshifting, **240**, 52–65.
Control of Translation by mRNA Secondary Structure in *Escherichia coli*. A Quantitative Analysis of Literature Data, **244**, 144–150.

Translational accuracy
Increased Longevity of EF-1α High-fidelity Mutants in *Podospora anserina*, **235**, 231–236.
Mutations in Helix 34 of *Escherichia coli* 16 S Ribosomal RNA Have Multiple Effects on Ribosome Function and Synthesis, **243**, 402–412.

Translational ambiguity
Transfer RNA Mutation and the Malleability of the Genetic Code, **235**, 1377–1380.

Translational control
Post-transcriptional Regulation of the *str* Operon in *Escherichia coli*. Ribosomal Protein S7 Inhibits Coupled Translation of S7 but not its Independent Translation, **235**, 111–124.
Post-transcriptional Regulation of the *str* Operon in *Escherichia coli*. Structural and Mutational Analysis of the Target Site for Translational Repressor S7, **235**, 125–139.
Control of Translation by mRNA Secondary Structure in *Escherichia coli*. A Quantitative Analysis of Literature Data, **244**, 144–150.

Translational coupling
Post-transcriptional Regulation of the *str* Operon in *Escherichia coli*. Ribosomal Protein S7 Inhibits Coupled Translation of S7 but not its Independent Translation, **235**, 111–124.
Post-transcriptional Regulation of the *str* Operon in *Escherichia coli*. Structural and Mutational Analysis of the Target Site for Translational Repressor S7, **235**, 125–139.
Translational Control in Production of Transposase and in Transposition of Insertion Sequence IS*3*, **235**, 1406–1420.

The Organization of Intercistronic Regions of the Aerobactin Operon of pColV-K30 may Account for the Differential Expression of the *iucABCD iutA* Genes, **238**, 288–293.

Translational diffusion
Translational and Rotational Diffusion of Proteins, **236**, 629–636.

Translational efficiency
Correlation of Translation Efficiency with the Decay of *lacZ* mRNA in *Escherichia coli*, **239**, 608–622.

Translational frameshifting
See also Frameshifting.
Translational Control in Production of Transposase and in Transposition of Insertion Sequence IS3, **235**, 1406–1420.

Translational rate
The Concentration of Polypeptide Chain Release Factors 1 and 2 at Different Growth Rates of *Escherichia coli*, **238**, 302–308.

Translational readthrough
Genetic Implication for an Interaction Between Release Factor One and Ribosomal Protein L7/L12 *in vitro*, **242**, 614–618.

Translesion synthesis
Accuracy of Replication Past the T-C (6-4) Adduct, **235**, 465–471.

Translocase
Kinetic Theory of ATP-driven Translocases on One-dimensional Polymer Lattices, **235**, 1436–1446.

Translocation
Kinetic Parameters of the Translocation of Bacteriophage T4 Gene 41 Protein Helicase on Single-stranded DNA, **235**, 1447–1458.
Synergism between the GTPase Activities of EF-Tu·GTP and EF-G·GTP on Empty Ribosomes. Elongation Factors as Stimulators of the Ribosomal Oscillation between Two Conformations, **242**, 644–654.

Transmembrane helices
Rotational Orientation of Transmembrane α-helices in Bacteriorhodopsin. A Neutron Diffraction Study, **236**, 1093–1104.
Prediction of Transmembrane Segments in Proteins Utilising Multiple Sequence Alignments, **237**, 182–192.

Transmembrane proteins
New Alignment Strategy for Transmembrane Proteins, **243**, 388–396.

Transmembrane signaling
Transmembrane Signaling. Mutational Analysis of the Cytoplasmic Linker Region of Taz1-1, a Tar-EnvZ Chimeric Receptor in *Escherichia coli*, **244**, 477–481.

Transmitted conformational changes
Local and Transmitted Conformational Changes on Complexation of an Anti-sweetener Fab, **236**, 247–274.

DD-Transpeptidase
Crystallization and X-ray Diffraction Study of the *Streptomyces* K15 Penicillin-binding DD-Transpeptidase, **241**, 295–297.

Transporter
A Creatine Transporter cDNA from *Torpedo* Illustrates Structure/Function Relationships in the GABA/Noradrenaline Transporter Family, **241**, 317–324.

Transposable element
Functional Analysis of the 14 kDa Protein of Insertion Sequence *2*, **236**, 503–513.
Tc1 Transposon-like Sequences are Widely Distributed in Salmonids, **241**, 26–34.

Transposase
Induction of the SOS Response by IS*1* Transposase, **242**, 339–350.

Transposition
Functional Analysis of the 14 kDa Protein of Insertion Sequence *2*, **236**, 503–513.
Genetic Evidence for IS*1* Transposition Regulated by InsA and the ΔInsA-B′-InsB Species, which is Generated by Translation from Two Alternative Internal Initiation Sites and Frameshifting, **240**, 52–65.
A Functional Analysis of the Tn*5* Transposase. Identification of Domains Required for DNA Binding and Multimerization, **241**, 166–177.
Induction of the SOS Response by IS*1* Transposase, **242**, 339–350.
Transposable Group II Introns in Fission and Budding Yeast. Site-specific Genomic Instabilities and Formation of Group II IVS plDNAs, **243**, 157–166.

Transposon
Interaction of Tn*5* Transposase with the Transposon Termini, **235**, 486–495.
The Dynamics of Murine LINE-1 Subfamily Amplification, **241**, 390–397.

Transthyretin
Crystallization of the Macromolecular Complex Transthyretin-Retinol-binding Protein, **244**, 110–113.

Tree search
Ligand Docking to Proteins With Discrete Side-chain Flexibility, **235**, 345–356.

Tree weighting
Volume Changes in Protein Evolution, **236**, 1067–1078.

Triacylglycerol lipase
Horse Pancreatic Lipase. The Crystal Structure Refined at 2·3 Å Resolution, **238**, 709–732.

Trichosporon cutaneum
Crystallization and Preliminary X-ray Analysis of Phenol Hydroxylase from *Trichosporon cutaneum*, **238**, 128–130.

Trifluoroethanol
Characterization of a Trifluoroethanol-induced Partially Folded State of α-Lactalbumin, **235**, 587–599.

Triplex DNA
The Loop Sequence Plays Crucial Roles for Isomerization of Intramolecular DNA Triplexes in Supercoiled Plasmids, **235**, 185–197.

Triplex DNA, *see* DNA triplex

tRNA
See also Aminoacyl t-RNA; Aminoacyl t-RNA synthetase.
Selective Perturbation of G530 of 16 S rRNA by Translational Miscoding Agents and a Streptomycin-dependence Mutation in Protein S12, **235**, 156–172.
Transfer RNA Mutation and the Malleability of the Genetic Code, **235**, 1377–1380.
tRNA Structure and Ribosomal Function. I. tRNA Nucleotide 27-43 Mutations Enhance First Position Wobble, **235**, 1381–1394.
tRNA Structure and Ribosomal Function. II. Interaction Between Anticodon Helix and other tRNA Mutations, **235**, 1395–1405.
Molecular Recognition of the Identity-determinant Set of Isoleucine Transfer RNA from *Escherichia coli*, **236**, 710–724.
In Vitro Selection of Small RNAs that Bind to *Escherichia coli* Phenylalanyl-tRNA Synthetase, **242**, 186–192.
Generality of the tRNA Origin of Short Interspersed Repetitive Elements (SINEs). Characterization of Three Different tRNA-derived Retroposons in the Octopus, **243**, 25–37.

tRNA class II
Escherichia coli Seryl-tRNA Synthetase Recognizes $tRNA^{Ser}$ by Its Characteristic Tertiary Structure, **236**, 738–748.

tRNA precursors
Characterization of the *Borrelia burgdorferi* RNase P RNA Gene Reveals a Novel Tertiary Interaction, **241**, 1–6.
Cleavage Site Selection by M1 RNA, the Catalytic Subunit of *Escherichia coli* RNase P, is influenced by pH, **244**, 511–521.

tRNA processing
A Functional Mutant of $tRNA^{Arg}_2$ with Ten Extra Nucleotides in Its TFC Arm, **235**, 1369–1376.
Characterization of the *Borrelia burgdorferi* RNase P RNA Gene Reveals a Novel Tertiary Interaction, **241**, 1–6.

tRNA recognition
Molecular Recognition of the Identity-determinant Set of Isoleucine Transfer RNA from *Escherichia coli*, **236**, 710–724.
Escherichia coli Seryl-tRNA Synthetase Recognizes $tRNA^{Ser}$ by Its Characteristic Tertiary Structure, **236**, 738–748.
Connecting Anticodon Recognition with the Active Site of *Escherichia coli* Glutaminyl-tRNA Synthetase, **240**, 111–118.

tRNA structure
Fitting the Structurally Diverse Animal Mitochondrial $tRNAs^{Ser}$ to Common Three-dimensional Constraints, **236**, 982–989.

tRNA synthetase, *see* Aminoacyl t-RNA synthetase

tRNA-like structures
Solution Structure of the 3′-End of Brome Mosaic Virus Genomic RNAs. Conformational Mimicry with Canonical tRNAs, **235**, 508–531.

$tRNA^{Ser}$
Fitting the Structurally Diverse Animal Mitochondrial $tRNAs^{Ser}$ to Common Three-dimensional Constraints, **236**, 982–989.

Tropomyosin
Coiled-coil Packing in Spermidine-induced Tropomyosin Crystals. A Comparative Study of Three Forms, **236**, 1212 1226.
Tropomyosin Length and Two-stranded F-actin Flexibility in the Thin Filament, **243**, 520–529.

Troponin
Gold/Fab Immuno Electron Microscopy Localization of Troponin H and Troponin T in *Lethocerus* Flight Muscle, **239**, 52–67.

***trp* attenuation protein**
11-fold Symmetry of the *trp* RNA-binding Attenuation Protein (TRAP) from *Bacillus subtilis* Determined by X-ray Analysis, **244**, 1–5.

***trp* operator**
A Thermodynamic Study of the *trp* Repressor–Operator Interaction, **238**, 669–681.

***trp* repressor**
The Solution Structures of the *trp* Repressor-Operator DNA Complex, **238**, 592–614.
A Thermodynamic Study of the *trp* Repressor–Operator Interaction, **238**, 669–681.

Truncated protein
Domain Structures of the MS Ring Component Protein (FliF) of the Flagellar Basal Body of *Salmonella typhimurium*, **236**, 546–555.

Truncated regulators
Interactions of Wild-type and Truncated LevR of *Bacillus subtilis* with the Upstream Activating Sequence of the Levanase Operon, **241**, 178–192.

TRwA, TRwB, TRwC
Genetic Organization of the Conjugal DNA Processing Region of the IncW Plasmid R388, **235**, 448–464.

Trypsin inhibitor
See also Bovine pancreatic trypsin inhibitor (BP71).
Solution Structure and Dynamics of PEC-60, a Protein of the Kazal Type Inhibitor Family, Determined by Nuclear Magnetic Resonance Spectroscopy, **239**, 137–153.
Erythrina caffra Trypsin Inhibitor Retains Its Native Structure and Function After Reducing Its Disulfide Bonds, **239**, 276–284.

Trypsin sensitive sites
Linker Insertion Mutagenesis of *Drosophila* Topoisomerase II. Probing The Structure of Eukaryotic Topoisomerase II, **235**, 436–447.

Trypsin treatment
Crystallization of 31 kDa C-terminal Fragment of Rat DNA Polymerase β, **235**, 1342–1344.

Tryptic treatment
Domain Structures of the MS Ring Component Protein (FliF) of the Flagellar Basal Body of *Salmonella typhimurium*, **236**, 546–555.

Tryptophan fluorescence
Biotin and Biotin Analogues Specifically Modify the Fluorescence Decay of Avidin, **242**, 559–565.
Characterization of the Tryptophan Fluorescence and Hydrodynamic Properties of Rat DNA Polymerase β, **244**, 224–235.

Tryptophan mutation
A Point Mutation at the Junction of Domain 2·3/2·4 of Transcription Factor σ^{70} Abrogates Productive Transcription and Restores its Expected Mobility on a Denaturing Gel, **242**, 9–22.

Tryptophan phosphorescence
Pressure Effects on Protein Flexibility: Monomeric Proteins, **242**, 291–301.

Tryptophan synthase α subunit
Unfolding-refolding Kinetics of the Tryptophan Synthase α Subunit by CD and Fluorescence Measurements, **236**, 1227–1240.

Tryptophanase
Crystallization and Preliminary X-ray Investigation of Holotryptophanases from *Escherichia coli* and *Proteus vulgaris*, **235**, 783–786.

Tryptophanyl-tRNA synthetase
Quantitative Analysis of Crystal Growth. Tryptophanyl-tRNA Synthetase Crystal Polymorphism and Its Relationship to Catalysis, **238**, 346–365.

Tubulin
A β-Tubulin Gene of *Naegleria* Encodes a Carboxy-terminal Tyrosine. Aromatic Amino Acids Are Conserved at Carboxy Termini, **235**, 377–388.
Solution Structure of GDP-tubulin Double Rings to 3 nm Resolution and Comparison with Microtubules, **238**, 214–225.

Tumor necrosis factor
Idiotope Determining Regions of a Mouse Monoclonal Antibody and Its Humanized Versions. Identification of Framework Residues that Affect Idiotype Expression, **235**, 53–60.
Two Crystal Forms of the Extracellular Domain of Type I Tumor Necrosis Factor Receptor, **239**, 332–335.
Interaction Between Tumour Necrosis Factor α Ribozyme and Cellular Proteins. Involvement in Ribozyme Stability and Activity, **242**, 619–629.

***N*-tuple bias**
Wide Variations in Neighbor-dependent Substitution Rates, **236**, 1022–1033.

Twitchin kinase
Crystallization and Preliminary X-ray Analysis of the Auto-inhibited Twitchin Kinase, **236**, 1259–1261.

Two-component system
The Modular Architecture of Bacterial Response Regulators. Insights into the Activation Mechanism of the BvgA Transactivator of *Bordetella pertussis*, **241**, 363–377.

Two-dimensional NMR
Three-dimensional Solution Structure of the Thrombin-binding DNA Aptamer d(GGTTGGTGTGGTTGG), **235**, 1532–1547.
Two-dimensional NMR Studies of Selenomethionyl Calmodulin, **239**, 545–554.

Two-dimensional nuclear magnetic resonance
Structure of the C_3HC_4 Domain by ^{1}H-nuclear Magnetic Resonance Spectroscopy. A New Structural Class of Zinc-finger, **237**, 201–211.

Two-factor interactions
Quantitative Analysis of Crystal Growth. Tryptophanyl-tRNA Synthetase Crystal Polymorphism and Its Relationship to Catalysis, **238**, 346–365.

Type 1 copper site
Nuclear Magnetic Resonance ^{15}N and ^{1}H Resonance Assignments and Global Fold of Rusticyanin. Insights into the Ligation and Acid Stability of the Blue Copper Site, **244**, 370–384.

Type 1 module
Solution Structure of a Pair of Fibronectin Type 1 Modules with Fibrin Binding Activity, **235**, 1302–1311.

Type I finger module
Domain Structure of the Fib-1 and Fib-2 Regions of Human Fibronectin. Thermodynamic Properties of the Type I Finger Module, **238**, 833–844.

Type III module
Crystals of the Cell-binding Module of Fibronectin Obtained from a Series of Recombinant Fragments Differing in Length, **238**, 123–127.

Tyrosination
A β-Tubulin Gene of *Naegleria* Encodes a Carboxy-terminal Tyrosine. Aromatic Amino Acids Are Conserved at Carboxy Termini, **235**, 377–388.

Tyrosine fluorescence
Engineered Tyrosine Residues Serve as the Local Probes to Detect a Kinetic Intermediate in the Folding of Ribose-binding Protein, **240**, 385–395.

Tyrosine free radical
Crystal Structure of a Free Radical Enzyme, Galactose Oxidase, **238**, 794 814.

Tyrosyl-tRNA synthetase mutant
Molecular Recognition in Proteins. Simulation Analysis of Substrate Binding by a Tyrosyl-tRNA Synthetase Mutant, **236**, 1049–1066.

TyrR
Ligand-induced Self-association of the *Escherichia coli* Regulatory Protein TyrR, **238**, 309–318.

Ubiquitin
Structure of Tetraubiquitin Shows How Multiubiquitin Chains Can be Formed, **236**, 601–609.

Ultraspriracle
BmCF1, a *Bombyx mori* RXR-type Receptor Related to the *Drosophila ultraspiracle*, **238**, 479–486.

Ultrastructure
An Ultrastructural, Time-resolved Study of Freezing in the Corneal Stroma, **236**, 749–758.
Gold/Fab Immuno Electron Microscopy Localization of Troponin H and Troponin T in *Lethocerus* Flight Muscle, **239**, 52–67.

Ultraviolet light mutagenesis, *see* UV light mutagenesis

umuDC
Identification of High Affinity Binding Sites for LexA which Define New DNA Damage-inducible Genes in *Escherichia coli*, **241**, 507–523.

***unc*-116**
Kinesin Light Chain Isoforms in *Caenorhabditis elegans*, **240**, 507–512.

unc-17
Alternative Splicing Leads to Two Cholinergic Proteins in *Caenorhabditis elegans*, **241**, 627–630.

Undecagold cluster
An Epitope Proximal to the Carboxyl Terminus of the α-Subunit is Located near the Lobe Tips of the Phosphorylase Kinase Hexadecamer, **235**, 974–982.

Unfolded state
Formation of a Hydrophobic Cluster in Denatured Bovine Pancreatic Trypsin Inhibitor, **236**, 412–420.
Electrophoretic Characterization of the Denatured States of Staphylococcal Nuclease, **242**, 670–682.

Unfolding
Thermodynamic Puzzle of Apomyoglobin Unfolding, **235**, 1318–1325.
Residual Structure in a Staphylococcal Nuclease Fragment. Is It a Molten Globule and is Its Unfolding a First-order Phase Transition?, **243**, 93–99.

Unfolding-refolding kinetics
Unfolding-refolding Kinetics of the Tryptophan Synthase α Subunit by CD and Fluorescence Measurements, **236**, 1227–1240.

Unpaired G-stacks
The Unusual Structure of the Human Centromere $(GGA)_2$ Motif. Unpaired Guanosine Residues Stacked Between Sheared G·A Pairs, **244**, 259–268.

UP element
Factor Independent Activation of *rrnB* P1. An "Extended" Promoter with an Upstream Element that Dramatically Increases Promoter Strength, **235**, 1421–1435.

Upstream activating sequence
Interactions of Wild-type and Truncated LevR of *Bacillus subtilis* with the Upstream Activating Sequence of the Levanase Operon, **241**, 178–192.

Uracil
Unusual Kinetics of Uracil Formation in Single and Double-stranded DNA by Deamination of Cytosine in Cyclobutane Pyrimidine Dimers, **235**, 807–812.

Urea gradient electrophoresis
Electrophoretic Characterization of the Denatured States of Staphylococcal Nuclease, **242**, 670–682.

Ureogenesis
Carbamyl Phosphate Synthetase III, an Evolutionary Intermediate in the Transition Between Glutamine-dependent and Ammonia-dependent Carbamyl Phosphate Synthetases, **243**, 131–140.

Uridylate kinase
The Structure of Uridylate Kinase with its Substrates, Showing the Transition State Geometry, **236**, 361–367.

Urokinase
Solution Structure of the Kringle Domain from Urokinase-type Plasminogen Activator, **235**, 1548–1559.

Ustilago maydis
The Characterization and Crystallization of a Virally Encoded *Ustilago maydis* KP4 Toxin, **243**, 792–795.

Uterus
The Human Calbindin-D_{9k} Gene. Complete Structure and Implications on Steroid Hormone Regulation, **235**, 1231–1238.

UV light mutagenesis
Accuracy of Replication Past the T-C (6-4) Adduct, **235**, 465–471.

UV photoproduct distribution
High Resolution Mapping of UV-induced Photoproducts in the *Escherichia coli lacI* Gene. Inefficient Repair of the Non-transcribed Strand Correlates with High Mutation Frequency, **238**, 319–332.

UvrB
Helicase Motifs V and VI of the *Escherichia coli* UvrB Protein of the UvrABC Endonuclease are Essential for the Formation of the Preincision Complex, **240**, 294–307.

UvrD
Dominant Negative Allele of the *Escherichia coli uvrD* Gene Encoding DNA Helicase II. A Biochemical and Genetic Characterization, **235**, 424–435.

Vα domain
Crystallization and Preliminary X-ray Diffraction Study of a Bacterially Produced T-cell Antigen Receptor Vα Domain, **239**, 339–341.

Vaccine design
Structural Mimicry and Enhanced Immunogenicity of Peptide Epitopes Displayed on Filamentous Bacteriophage. The V3 Loop of HIV-1 gp120, **243**, 167–172.

Variable selection
Protein Secondary Structure from Circular Dichroism Spectroscopy. Combining Variable Selection Principle and Cluster Analysis with Neural Network, Ridge Regression and Self-consistent Methods, **242**, 497–507.

VCAM-1
Crystallization and Preliminary X-ray Diffraction Characterisation of both a Native and Selenomethionyl VLA-4 Binding Fragment of VCAM-1, **244**, 464–468.

Vesicle
Polyhedral Assembly of a Membrane Protein in its Three-dimensional Crystal, **236**, 990–994.

Vibrio harveyi
Crystallization and Preliminary Crystallographic Analysis of NADPH : FMN Oxidoreductase from *Vibrio harveyi*, **241**, 283–287.

Vicilin
Structure of Phaseolin at 2·2 Å Resolution. Implications for a Common Vicilin/Legumin Structure and the Genetic Engineering of Seed Storage Proteins, **238**, 748–776.

Vimentin
Characterization of Multiple Oligometric Vimentin Intermediate Filament Units by Transient Electric Birefringence Measurements, **236**, 1241–1249.

Vinculin
Analysis of Repeated Motifs in the Talin Rod, **235**, 1278–1290.

Viral coat protein
The Refined Crystal Structure of Hexon, the Major Coat Protein of Adenovirus Type 2, at 2·9 Å Resolution, **242**, 430–455.

Viral connector
Analysis of Electron Microscope Images and Electron Diffraction Patterns of Thin Crystals of Ø29 Connectors in Ice, **240**, 281–287.

Viral RNA
Solution Structure of the 3′-End of Brome Mosaic Virus Genomic RNAs. Conformational Mimicry with Canonical tRNAs, **235**, 508–531.

Virulence
The Organization of Intercistronic Regions of the Aerobactin Operon of pColV-K30 may Account for the Differential Expression of the *iucABCD iutA* Genes, **238**, 288–293.
Crystallization and Preliminary X-ray Studies of the Diphtheria *Tox* Repressor from *Corynebacterium diphtheriae*, **244**, 654–656.

Virus
Hydrogen Exchange Dynamics of the P22 Virion Determined by Time-resolved Raman Spectroscopy. Effects of Chromosome Packaging on the Kinetics of Nucleotide Exchanges, **241**, 68–82.
The Characterization and Crystallization of a Virally Encoded *Ustilago maydis* KP4 Toxin, **243**, 792–795.

Virus assembly
Dynamics of the Nucleoprotein Structure of Simian Virus 40 Regulatory Region During Viral Development, **238**, 501–513.
To Build a Virus Capsid. An Equilibrium Model of the Self Assembly of Polyhedral Protein Complexes, **241**, 59–67.
Crystal Structure of Bacteriophage fr Capsids at 3·5 Å Resolution, **244**, 279–290.

Virus coat protein
Fungal Virus Capsids are Cytoplasmic Compartments for the Replication of Double-stranded RNA Formed as Icosahedral Shells of Asymmetric Gag Dimers, **244**, 255–258.

Virus structure
Molecular Models and Structural Comparisons of Native and Mutant Class I Filamentous Bacteriophages. Ff(fd, f1, M13), If1 and IKe, **235**, 260–286.
The Refined Three-Dimensional Structure of an Insect Virus at 2·8 Å Resolution, **235**, 565–586.
The Organization of the Spike Complex of Semliki Forest Virus, **236**, 572–583.
Analysis of the Single-stranded DNA Bacteriophage ϕX174, Refined at a Resolution of 3·0 Å, **237**, 517–543.

Vitamin B6
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Human Ornithine Aminotransferase, **243**, 128–130.

Vitamin D
The Human Calbindin-D_{9k} Gene. Complete Structure and Implications on Steroid Hormone Regulation, **235**, 1231–1238.

Vitelline membrane
Crystallization and Preliminary Crystallographic Data of Vitelline Membrane Outer Layer Protein 1 VMO1, **235**, 793–794.

Vitellogenin
Analysis of Mosquito Vitellogenin cDNA. Similarity with Vertebrate Phosvitins and Arthropod Serum Proteins, **237**, 641–647.

V_L domain structure
Solution Structure of an Isolated Antibody V_L Domain, **236**, 310–327.

VMO1
Crystallization and Preliminary Crystallographic Data of Vitelline Membrane Outer Layer Protein 1 VMO1, **235**, 793–794.

von Willebrand factor
The Secondary Structure of the von Willebrand Factor Type A Domain in Factor B of Human Complement by Fourier Transform Infrared Spectroscopy. Its Occurrence in Collagen Types VI, VII, XII and XIV, the Integrins and Other Proteins by Averaged Structure Predictions, **238**, 104–119.

Vpu protein
The Human Immunodeficiency Virus Type 1 Encoded Vpu Protein is Phosphorylated by Casein Kinase-2 (CK-2) at Positions Ser52 and Ser56 within a Predicted α-Helix-Turn-α-Helix-Motif, **236**, 16–25.

Water
The Role of a Conserved Internal Water Molecule and Its Associated Hydrogen Bond Network in Cytochrome *c*, **236**, 786–799.
Improved Continuum Electrostatic Modelling in Proteins, with Comparison to Experiment, **236**, 887–903.
Structures of Three Human β Alcohol Dehydrogenase Variants. Correlations with their Functional Differences, **239**, 415–429.

Wedge
Sequence Elements Responsible for DNA Curvature, **244**, 135–143.

Wobble rules
Analysis of Action of Wobble Nucleoside Modifications on Codon-Anticodon Pairing within the Ribosome, **240**, 8–19.

Xeroderma cells
Proximal and Distal Effects of Sequence Context on Ultraviolet Mutational Hotspots in a Shuttle Vector Replicated in Xeroderma Cells, **236**, 491–502.

X-ray crystal structure
The 1·8 Å Structure of Carbonmonoxy-β_4 Hemoglobin. Analysis of Homotetramer with the R Quaternary Structure of Liganded $\alpha_2\beta_2$ Hemoglobin, **236**, 817–830.

The 1·9 Å Structure of Deoxyβ_4 Hemoglobin. Analysis of the Partitioning of Quaternary-associated and Ligand-induced Changes in Tertiary Structure, **236**, 831–843.

Crystal Structure of a Free Radical Enzyme, Galactose Oxidase, **238**, 794–814.

X-ray crystallography

The Symmetry of *Escherichia coli* cpn60 (GroEL) Crystal Structure of the Fungal Peroxidase from *Arthromyces ramosus* at 1·9 Å Resolution. Structural Comparisons with the Lignin and Cytochrome *c* Peroxidases, **235**, 331–344.

Preliminary X-ray Crystallographic Analysis of Biotin Carboxylase Isolated from *Escherichia coli*, **235**, 367–369.

Crystallization of D-Lactate Dehydrogenase from *Lactobacillus bulgaricus*, **235**, 370–371.

Crystallization and Preliminary X-ray Analysis of the Monoclonal Anti-tumor Antibody BR96 and its Complex with the Le^y Determinant, **235**, 372–376.

Refined Crystal Structure of Rat Parvalbumin, a Mammalian α-lineage Parvalbumin, at 2·0 Å Resolution, **235**, 718–732.

Crystallization and Preliminary Crystallographic Analysis of Sfericase. A *Bacillus sphaericus* Calcium-Dependent Serine Proteinase, **235**, 760–762.

Crystallization and Preliminary X-ray Diffraction Studies of the Soluble 14 kDa β-Galactoside-binding Lectin from Bovine Heart, **235**, 787–789.

Crystallization and Preliminary X-ray Studies of Lipase B from *Candida antarctica*, **235**, 790–792.

Crystallization and Preliminary Crystallographic Data of Vitelline Membrane Outer Layer Protein 1 VMO1, **235**, 793–794.

Crystallization and Preliminary X-ray Diffraction Analysis of the β-Chain of a T-cell Antigen Receptor, **235**, 795–797.

Crystallization and a Preliminary X-ray Diffraction Study of Macrophage Migration Inhibitory Factor from Human Lymphocytes, **235**, 1141–1143.

Crystallization and Preliminary X-ray Analysis of the Superoxide Dismutase from *Mycobacterium tuberculosis*, **235**, 1156–1158.

Crystallization of 31 kDa C-terminal Fragment of Rat DNA Polymerase β, **235**, 1342–1344.

Crystallization and Preliminary Diffraction Analysis of the Catalytic Domain of Xylanase Z from *Clostridium thermocellum*, **235**, 1348–1350.

X-ray Analysis at 2·0 Å Resolution of Mouse Submaxillary Renin Complexed with a Decapeptide Inhibitor CH-66, Based on the 4–16 Fragment of Rat Angiotensinogen, **236**, 342–360.

Preliminary Crystallographic Study of Protocatechuate 3,4-Dioxygenase from *Brevibacterium fuscum*, **236**, 374–376.

Crystallization of Catechol-1,2 Dioxygenase from *Pseudomonas arvilla C-1*, **236**, 377–378.

Preliminary Crystallographic Analysis of Methane Mono-oxygenase Hydroxylase from *Methylosinus trichosporium* OB3b, **236**, 379–381.

Crystallization and Preliminary X-ray Analysis of Human Plasma Apolipoprotein C-I, **236**, 382–384.

Structure of Tetraubiquitin Shows How Multiubiquitin Chains Can be Formed, **236**, 601–609.

Comparative Studies of High Resolution *Z*-DNA Crystal Structures. Part 1: Common Hydration Patterns of Alternating dC-dG, **236**, 1154–1168.

Coiled-coil Packing in Spermidine-induced Tropomyosin Crystals. A Comparative Study of Three Forms, **236**, 1212–1226.

Crystallization and Preliminary X-ray Analysis of the Auto-inhibited Twitchin Kinase, **236**, 1259–1261.

Crystallization and Preliminary X-ray Diffraction Studies of a Glutathione S-Transferase from the Australian Sheep Blowfly, *Lucilia cuprina*, **236**, 1407–1409.

Crystallization and Preliminary Crystallographic Analysis of Two Endo-β-*N*-acetylglucosaminidases, Endo H and Endo F_1, **237**, 157–159.

Crystallization and Preliminary X-ray Studies of Cyclodextrin Glucanotransferase from Alkalophilic *Bacillus* sp. 1011, **237**, 163–164.

Crystallization of the NADH-specific Enoyl Acyl Carrier Protein Reductase from *Brassica napus*, **237**, 240–242.

Structural and Electrophysiological Analysis of Annexin V Mutants. Mutagenesis of Human Annexin V, an *in Vitro* Voltage-gated Calcium Channel, Provides Information about the Structural Features of the Ion Pathway, the Voltage Sensor and the Ion Selectivity Filter, **237**, 479–499.

Crystal Structure of Toxin II from the Scorpion *Androctonus australis* Hector Refined at 1·3 Å Resolution, **238**, 88–103.

Crystallization and Preliminary X-ray Analysis of Phenol Hydroxylase from *Trichosporon cutaneum*, **238**, 128–130.

The *de Novo* Design of an Antibody Combining Site. Crystallographic Analysis of the V_L Domain Confirms the Structural Model, **238**, 226–244.

Crystallization and Preliminary X-ray Analysis of the Low Molecular Weight Phosphotyrosyl Protein Phosphatase from Bovine Heart, **238**, 281–283.

Crystallization and Preliminary X-ray Diffraction Studies of Curculin. A New Type of Sweet Protein Having Taste-modifying Action, **238**, 286.

Refined Crystal Structures of Glucoamylase from *Aspergillus awamori* var. *X100*, **238**, 575–591.

Crystallization and Preliminary X-ray Analysis of Copper Amine Oxidase from *Escherichia coli* K-12, **238**, 635–637.

Crystal Structure of Human Class mu Glutathione Transferase GSTM2-2. Effects of Lattice Packing on Conformational Heterogeneity, **238**, 815–832.

Crystallization and Preliminary Crystallographic Data for an FMN-dependent Nitroreductase Enzyme from *Escherichia coli* B, **238**, 852–853.

Crystallization and Preliminary X-ray Analysis of a Lipase from *Bacillus subtilis*, **238**, 857–859.

The Crystal Structure of C-C-A-T-T-A-A-T-G-G. Implications for Bending of *B*-DNA at T-A Steps, **239**, 79–96.

Crystallization and Preliminary X-ray Analysis of an Anti-Staphylococcal Nuclease–Staphylococcal Nuclease Complex and of a Second Anti-Staphylococcal Nuclease Antibody, **239**, 154–157.

Crystallization and Preliminary X-ray Analysis of Restriction Endonuclease *Bam*HI–DNA Complex, **239**, 430–432.

Five Viral Peptide–HLA-A2 Co-crystals. Simultaneous Space Group Determination and X-ray Data Collection, **239**, 581–587.

Crystallization of Enzyme IIB of the Cellobiose-specific Phosphotransferase System of *Escherichia coli*, **239**, 588–590.

Crystallization and Preliminary X-ray Analysis of GAF 31. A Protein Which Inhibits the Life Cycle of HIV-1, **240**, 92–94.

Crystallization and Preliminary Crystallographic Investigation of Electron-transfer Flavoprotein from the Bacterium *Methylophilus* W3A1, **240**, 265–266.

Crystallization and Preliminary X-ray Diffraction Analysis of a Type I β-glucosidase Encoded by the *bgl A* Gene of *Bacillus polymyxa*, **240**, 267–270.

Crystallization and Preliminary Characterization of Crystals of D-2-hydroxyisocaproate Dehydrogenase from *Lactobacillus casei*, **240**, 400–402.

The Monofunctional Chorismate Mutase from *Bacillus subtilis*. Structure Determination of Chorismate Mutase and Its Complexes with a Transition State Analog and Prephenate, and Implications for the Mechanism of the Enzymatic Reaction, **240**, 476–500.

Crystallization and Preliminary X-ray Diffraction Studies on a Soluble *Escherichia coli* Quinone Oxidoreductase, **240**, 501–503.
Crystallization and Preliminary X-ray Analysis of a Trimeric Form of Human Mannose Binding Protein, **241**, 125–127.
The Crystallization and Preliminary X-ray Analysis of Allosteric Chorismate Mutase, **241**, 273–274.
Crystallization and Preliminary Crystallographic Analysis of NADPH : FMN Oxidoreductase from *Vibrio harveyi*, **241**, 283–287.
Crystallization and X-ray Diffraction Study of the *Streptomyces* K15 Penicillin-binding DD-Transpeptidase, **241**, 295–297.
Polypeptide Conformational Space. Dynamics by Solution NMR Disorder by X-ray Crystallography, **241**, 431–439.
Crystal Structure of a Peptide Complex of Anti-influenza Peptide Antibody Fab 26/9. Comparison of Two Different Antibodies Bound to the Same Peptide Antigen, **241**, 534–556.
Crystallization and Preliminary X-ray Diffraction Study of an Idiotope-Anti-Idiotope Fv-Fv Complex, **241**, 739–743.
Crystallization and Preliminary X-ray Diffraction Analysis of the ArsC Protein from the *Escherichia coli* Arsenical Resistance Plasmid, R773, **242**, 701–702.
Crystallization and Preliminary X-ray Analysis of the Two Domains of Glucosamine-6-phosphate Synthase from *Escherichia coli*, **242**, 703–705.
Protein Hydration Observed by X-ray Diffraction. Solvation Properties of Penicillopepsin and Neuraminidase Crystal Structures, **243**, 100–115.
Crystallization and Preliminary Diffraction Studies of *Escherichia coli* Lysyl-tRNA Synthetase, **243**, 123–125.
Crystallization and Preliminary X-ray Diffraction Studies of Recombinant Human Ornithine Aminotransferase, **243**, 128–130.
Crystallization and Preliminary X-ray Analysis of a New Crystal form of Nitrite Reductase from *Pseudomonas aeruginosa*, **243**, 347–350.
Preliminary X-ray Diffraction Analysis of Crystals of the P_{II} Protein from *Escherichia coli*, **243**, 796–798.
Crystallization and Preliminary X-ray Crystallographic Studies of Thermostable Xylanase Crystals Isolated from *Paecilomyces varioti*, **243**, 806–808.
Refined X-ray Structure of *Dictyostelium discoideum* Nucleoside Diphosphate Kinase at 1·8 Å Resolution, **243**, 873–890.
Crystallization and Preliminary X-ray Analysis of Recombinant 1-Aminocyclopropane-1-carboxylate Synthase from Apple. A Key Enzyme in the Biosynthesis of the Plant Hormone Ethylene, **243**, 947–949.
11-fold Symmetry of the *trp* RNA-binding Attenuation Protein (TRAP) from *Bacillus subtilis* Determined by X-ray Analysis, **244**, 1–5.
Crystallization and Preliminary X-ray Analysis of the Major Cellulose-binding Domain of the Cellulosome from *Clostridium thermocellum*, **244**, 236–237.
X-ray Structure of Recombinant Ricin A-Chain at 1·8 Å Resolution, **244**, 410–422.
Crystallization and Preliminary X-ray Diffraction Characterisation of both a Native and Selenomethionyl VLA-4 Binding Fragment of VCAM-1, **244**, 464–468.
Structure of Protocatechuate 3,4-Dioxygenase from *Pseudomonas aeruginosa* at 2·15 Å Resolution, **244**, 586–608.
Crystallization and Preliminary Crystallographic Data of Recombinant Human Osteogenic Protein-1 (hOP-1), **244**, 657–658.
The Refined Three-Dimensional Structure of an Insect Virus at 2·8 Å Resolution, **235**, 565–586.
Crystallization and Preliminary X-ray Investigation of Holotryptophanases from *Escherichia coli* and *Proteus vulgaris*, **235**, 783–786.
A New Crystal Form of Abrin-a from the Seeds of *Abrus precatorius*, **235**, 1152–1153.
Crystallization and Preliminary X-ray Investigation of a Recombinant Outer Membrane Protein from *Neisseria meningitis*, **235**, 1154–1155.
Crystallization, Characterization and Preliminary Crystallographic Studies of Carbamate Kinase of *Streptococcus faecium*, **235**, 1345–1347.
Characterization, Crystallization and Preliminary X-ray Crystallographic Analysis of the Complex between Barley α-Amylase and the Bifunctional α-Amylase/Subtilisin Inhibitor from Barley Seeds, **236**, 368–371.
Crystallization and Preliminary X-ray Analysis of Protocatechuate 3,4-Dioxygenase from *Acinetobacter calcoaceticus*, **236**, 372–373.
An Ultrastructural, Time-resolved Study of Freezing in the Corneal Stroma, **236**, 749–758.
Crystallization and Preliminary X-ray Analysis of apo-S100β and S100β with Ca^{2+}, **236**, 953–957.
A Regular 1 : 1 Complex of Two Allosteric States in the Single Crystal of L-Lactate Dehydrogenase from *Bifidobacterium longum*, **236**, 958–959.
Preliminary X-ray Diffraction Studies of Recombinant 19 kDa Human Fibroblast Collagenase, **236**, 1410–1412.
Molecular Structure at 1·8 Å of Mouse Liver Class Pi Glutathione S-transferase Complexed with *S*-(*p*-Nitrobenzyl)glutathione and Other Inhibitors, **237**, 298–314.
Crystallization and Preliminary X-ray Analysis of *Candida albicans* Phosphomannose Isomerase, **237**, 349–350.
Crystallization and Preliminary Crystallographic Study of β-Momorcharin, **238**, 284–285.
The Specific Binding Site of the Volatile Anesthetic Diiodomethane to Purple Membrane by X-ray Diffraction, **238**, 297–301.
Crystallization and Preliminary Crystallographic Analysis of a DNA (Cytosine-5)-Methyltransferase from *Haemophilus aegyptius* Bound Covalently to DNA, **238**, 626–629.
Crystallization and Preliminary Crystallographic Studies of Giα1 and Mutants of Giα1 in the GTP and GDP-bound States, **238**, 630–634.
Characterization of Crystals of Satellite Panicum Mosaic Virus, **238**, 849–851.
Crystallization and Preliminary X-ray Diffraction Studies of Nitric Oxide Reductase Cytochrome P450nor from *Fusarium oxysporum*, **239**, 158–159.
Equatorial A-band and I-band X-ray Diffraction from Relaxed and Active Fish Muscle. Further Details of Myosin Crossbridge Behaviour, **239**, 500–512.
Crystallization and Preliminary X-ray Analysis of Human α-Galactosidase A Complex, **239**, 578–580.
Crystallization and Low Temperature Diffraction Studies of the DNA Binding Domain of the Single-stranded DNA Binding Protein from *Escherichia coli*, **240**, 396–399.
Crystallization and Preliminary X-ray Diffraction Studies of Xylose Isomerase from *Thermoanaerobacterium thermosulfurigenes* Strain 4B, **240**, 504–506.
Crystallization and Preliminary X-ray Diffraction Studies on Cytosolic (Class 1) Aldehyde Dehydrogenase from Sheep Liver, **241**, 263–264.
Preliminary Crystallographic Study of *Escherichia coli* RuvC Protein. An Endonuclease Specific for Holliday Junctions, **241**, 281–282.
Crystallization and Preliminary X-ray Diffraction Studies on the Apo Form of Orotate Phosphoribosyltransferase from *Escherichia coli*, **241**, 292–294.
Crystallization and Preliminary X-ray Investigation of Recombinant Simian Immunodeficiency Virus Matrix Protein, **241**, 744–746.
Crystallization of GreA, a Transcript Cleavage Factor from *Escherichia coli*, **242**, 582–585.
Crystals of HIV-1 Reverse Transcriptase Diffracting to 2·2 Å Resolution, **242**, 586–588.

Crystallization and Preliminary X-ray Analysis of Wild-type and K272A Mutant Glutamate 1-Semialdehyde Aminotransferase from *Synechococcus*, **242**, 591–594.
Crystallization and Preliminary X-ray Analysis of the Fab Fragment of a Human Monoclonal IgM Rheumatoid Factor (2A2), **242**, 706–708.
Crystallization of Mutant β Subunit of F_1-ATPase from Thermophilic *Bacillus* PS3, **242**, 709–711.
Crystallization and Preliminary X-ray Diffraction Studies on a Recombinant Isopenicillin N Synthase from *Cephalosporium acremonium*, **242**, 712–714.
Crystallization and Preliminary Crystallographic Characterization of Endo-polygalacturonase II from *Aspergillus niger*, **243**, 351–352.
Recombination-like Structure of d(CCGCGG), **243**, 484–493.
Energy Coupling in an Ion Pump. The Reprotonation Switch of Bacteriorhodopsin, **243**, 621–638.
Three-dimensional Structures of the Free and the Antigen-complexed Fab from Monoclonal Anti-lysozyme Antibody D44.1, **243**, 767–781.
Crystallization of Mitochondrial Cytochrome b-c_1 Complex from Gel With or Without Reduced Pressure, **243**, 802–805.
Conformation and Fibrillogenesis of Alzheimer Aβ Peptides with Selected Substitution of Charged Residues, **244**, 64–73.
Crystallization of the Macromolecular Complex Transthyretin-Retinol-binding Protein, **244**, 110–113.
Purification, Crystallization and Preliminary X-ray Diffraction Studies of Alpha-Toxin of *Clostridium perfringens*, **244**, 648–650.

X-ray solution scattering
Solution Structure of GDP-tubulin Double Rings to 3 nm Resolution and Comparison with Microtubules, **238**, 214 225.

X-ray standing waves
Structure Characterization of Membrane Bound and Surface Adsorbed Protein, **237**, 1–4.

X-ray structure
Planar Stacking Interactions of Arginine and Aromatic Side-Chains in Proteins, **235**, 709–717.
Refined Molecular Structure of Pig Pancreatic α-Amylase at 2·1 Å Resolution, **235**, 1560–1584.
A Single 2′-Hydroxyl Group Converts *B*-DNA to *A*-DNA. Crystal Structure of the DNA-RNA Chimeric Decamer Duplex d(CCGGC)r(G)d(CCGG) with a Novel Intermolecular G·C Base-paired Quadruplet, **236**, 275–285.
The Structure of Uridylate Kinase with its Substrates, Showing the Transition State Geometry, **236**, 361–367.
The 1·6 Å Structure of Histidine-containing Phosphotransfer Protein HPr from *Streptococcus faecalis*, **236**, 1341–1355.
Structural Analysis of *Urechis caupo* Hemoglobin, **237**, 87–97.
The Refined Structures of a Stabilized Mutant and of Wild-type Pyruvate Oxidase from *Lactobacillus plantarum*, **237**, 315–335.
Glycera dibranchiata Hemoglobin. X-ray Structure of Carbonmonoxide Hemoglobin at 1·5 Å Resolution, **238**, 42–53.
Alternative Native Flap Conformation Revealed by 2·3 Å Resolution Structure of SIV Proteinase, **239**, 97–103.
Crystal and Molecular Structure of Barley α-Amylase, **239**, 104–121.
Crystallization of Histidyl-tRNA Synthetase from *Escherichia coli*, **241**, 275–277.
Structural Analysis of Antibody Specificity. Detailed Comparison of Five Fab′-Steroid Complexes, **241**, 663–690.
Crystallization of a Hyperthermophilic Archaeal Elongation Factor 1α, **242**, 175–177.
Cavity Mutants of Savinase™. Crystal Structures and Differential Scanning Calorimetry Experiments Give Hints of the Function of the Buried Water Molecules in Subtilisins, **242**, 193–202.
Crystal Structure of the 50 kDa Metallo Protease from *Serratia marcescens*, **242**, 244–251.
Crystal Structure of Cytochrome c_3 from *Desulfovibrio desulfuricans* Norway at 1·7 Å Resolution, **243**, 653–667.
Refined Structure of the Porin from *Rhodopseudomonas blastica*. Comparison with the Porin from *Rhodobacter capsulatus*, **243**, 891–905.

***xyl* Operon**
Transcription of the *xyl* Operon is Controlled in *Bacillus subtilis* by Tandem Overlapping Operators Spaced by Four Base-pairs, **243**, 413–424.

Xylanase
Crystallization and Preliminary Diffraction Analysis of the Catalytic Domain of Xylanase Z from *Clostridium thermocellum*, **235**, 1348–1350.
Crystallization and Preliminary X-ray Crystallographic Studies of Thermostable Xylanase Crystals Isolated from *Paecilomyces varioti*, **243**, 806–808.

Xylose isomerase
Crystallization and Preliminary X-ray Diffraction Studies of Xylose Isomerase from *Thermoanaerobacterium thermosulfurigenes* Strain 4B, **240**, 504–506.

Yeast
Analysis of RNA Chain Elongation and Termination by *Saccharomyces cerevisiae* RNA Polymerase III, **235**, 1173–1192.
Encounters of *Saccharomyces cerevisiae* RNA Polymerase III with its Transcription Factors during RNA Chain Elongation, **235**, 1193–1205.
Refined Structure of Transketolase from *Saccharomyces cerevisiae* at 2·0 Å Resolution, **238**, 387–404.
Mutational Analysis of the C-Terminal Region of *Saccharomyces cerevisiae* Ribosomal Protein L25 *in Vitro* and *in Vivo* Demonstrates the Presence of Two Distinct Functional Elements, **240**, 243–255.
Phosphorylation of the C-terminal Domain of Yeast Topoisomerase II by Casein Kinase II Affects DNA-Protein Interaction, **243**, 10–24.
Unwound Regions in Yeast Centromere IV DNA, **243**, 179–189.

Yeast TBP
Yeast TBP can Replace its Human Homologue in the RNA Polymerase I-specific Multisubunit Factor SL1, **243**, 840–845.

Zeta-crystallin
Crystallization and Preliminary X-ray Diffraction Studies on a Soluble *Escherichia coli* Quinone Oxidoreductase, **240**, 501–503.

Zinc
Crystallographic Study of Azide-inhibited Bovine Cu,Zn Superoxide Dismutase, **240**, 179–183.

Zinc endopeptidase
Refined 2·0 Å X-ray Crystal Structure of the Snake Venom Zinc-endopeptidase Adamalysin II. Primary and Tertiary Structure Determination, Refinement, Molecular Structure and Comparison with Astacin, Collagenase and Thermolysin, **239**, 513–544.

Zinc finger
Conformational Behaviour of the Active and Inactive Forms of the Nucleocapsid NCp7 of HIV-1 Studied by ^{1}H NMR, **235**, 287–301.

The OZF Gene Encodes a Protein Consisting Essentially of Zinc Finger Motifs, **236**, 399–404.
Structure of the C_3HC_4 Domain by ^1H-nuclear Magnetic Resonance Spectroscopy. A New Structural Class of Zinc-finger, **237**, 201–211.
Analysis of the DNA-binding Affinity, Sequence Specificity and Context Dependence of the Glucocorticoid Receptor Zinc Finger Region, **239**, 664–688.
Relative Contributions of the Zinc Fingers of Transcription Factor IIIA to the Energetics of DNA Binding, **244**, 23–35.

Zinc hydrolase
Cytidine Deaminase. The 2·3 Å Crystal Structure of an Enzyme : Transition-state Analog Complex, **235**, 635–656.

Zinc-metalloprotease
Crystallization and Preliminary X-ray Crystallographic Studies of Recombinant Human Leukotriene A_4 Hydrolase Complexed with Bestatin, **238**, 854–856.

Zymogens
Preliminary Crystallographic Studies on Human Complement Pro-factor D, **235**, 1144–1146.
